

The Florida Senate
COMMITTEE MEETING EXPANDED AGENDA

TRANSPORTATION
Senator Latvala, Chair
Senator Evers, Vice Chair

MEETING DATE: Tuesday, October 4, 2011
TIME: 2:00 —4:00 p.m.
PLACE: *Mallory Horne Committee Room, 37 Senate Office Building*

MEMBERS: Senator Latvala, Chair; Senator Evers, Vice Chair; Senators Benacquisto, Bullard, Garcia, Joyner, Norman, Storms, and Wise

TAB	BILL NO. and INTRODUCER	BILL DESCRIPTION and SENATE COMMITTEE ACTIONS	COMMITTEE ACTION
1		Presentation on impending fuel tax revenue shortfalls	Presented
2		Presentation on the Department of Transportation's Five Year Work Program	Presented
3		Presentation on Intelligent Transportation Systems	Presented

Driving Efficiency: Cutting Costs for Families at the Pump and Slashing Dependence on Oil

OBAMA ADMINISTRATION Fuel Economy Standards

In the year 2025

The fleet-wide average will be

Consumers will have saved
\$1.7 TRILLION
at the pump over the
life of the program.

A family that purchases a new
vehicle in 2025 will save

\$8,200

in fuel costs when compared with
a similar vehicle in 2010.

Over the life of the program, the standards will:

Save **12** billion
barrels
of oil.

Eliminate **6** billion
metric
tons
of carbon dioxide pollution.

This program, together with standards already put into place by this
administration for Model Years 2011-2016, will result in significant
cost savings for consumers at the pump, dramatically reduce oil
consumption, cut pollution and create jobs.

FLORIDA DEPARTMENT OF TRANSPORTATION

WORK PROGRAM OVERVIEW

Presented by
Brian Blanchard, Assistant Secretary for
Engineering and Operations
October 4, 2011

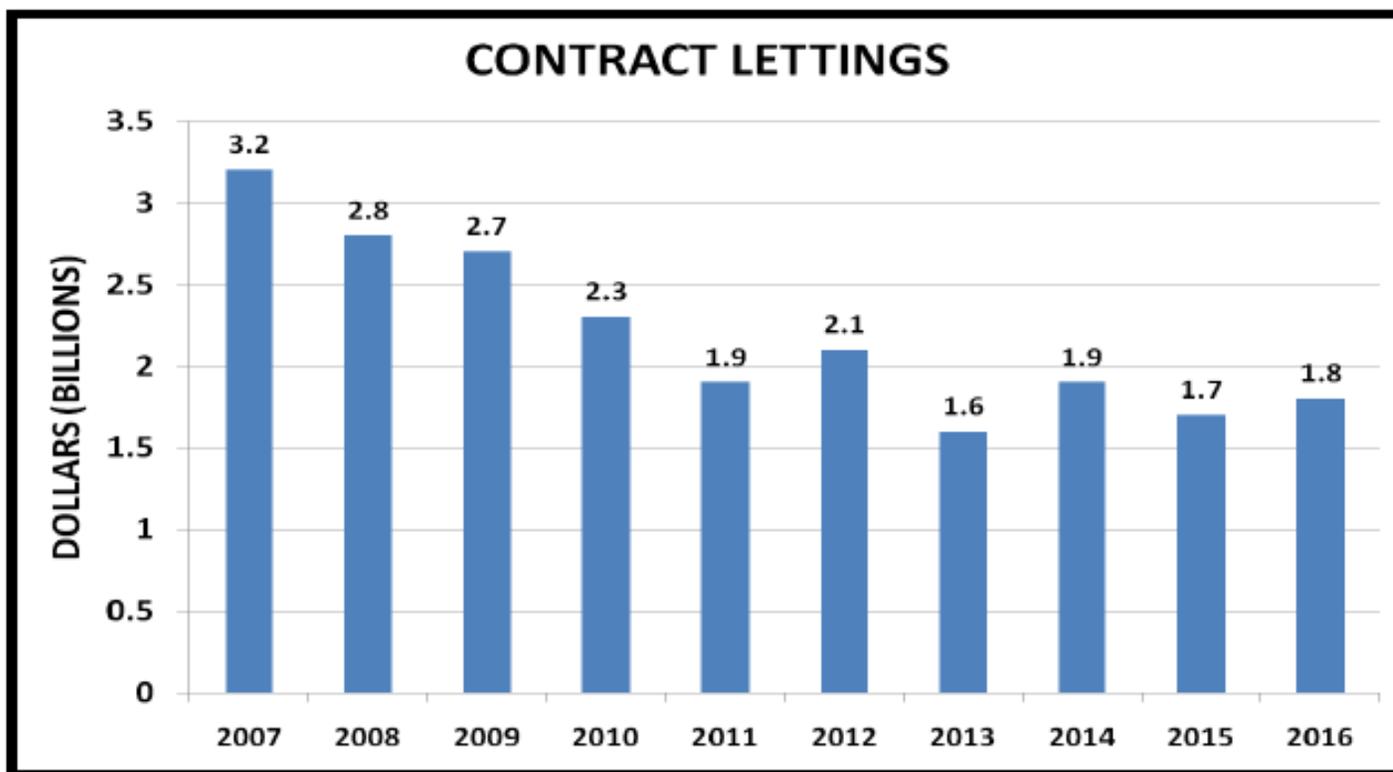

The Transportation Work Program

- ◆ A five-year plan of transportation projects
 - ✓ Projects developed in partnership with communities, metropolitan planning organizations, local governments, state and federal agencies, modal partners, and regional entities
 - ✓ Projects must be consistent with laws, policy, program objectives and priorities

The Transportation Work Program

THROUGH SUCCESSFUL DELIVERY OF AN ANNUAL WORK PROGRAM...

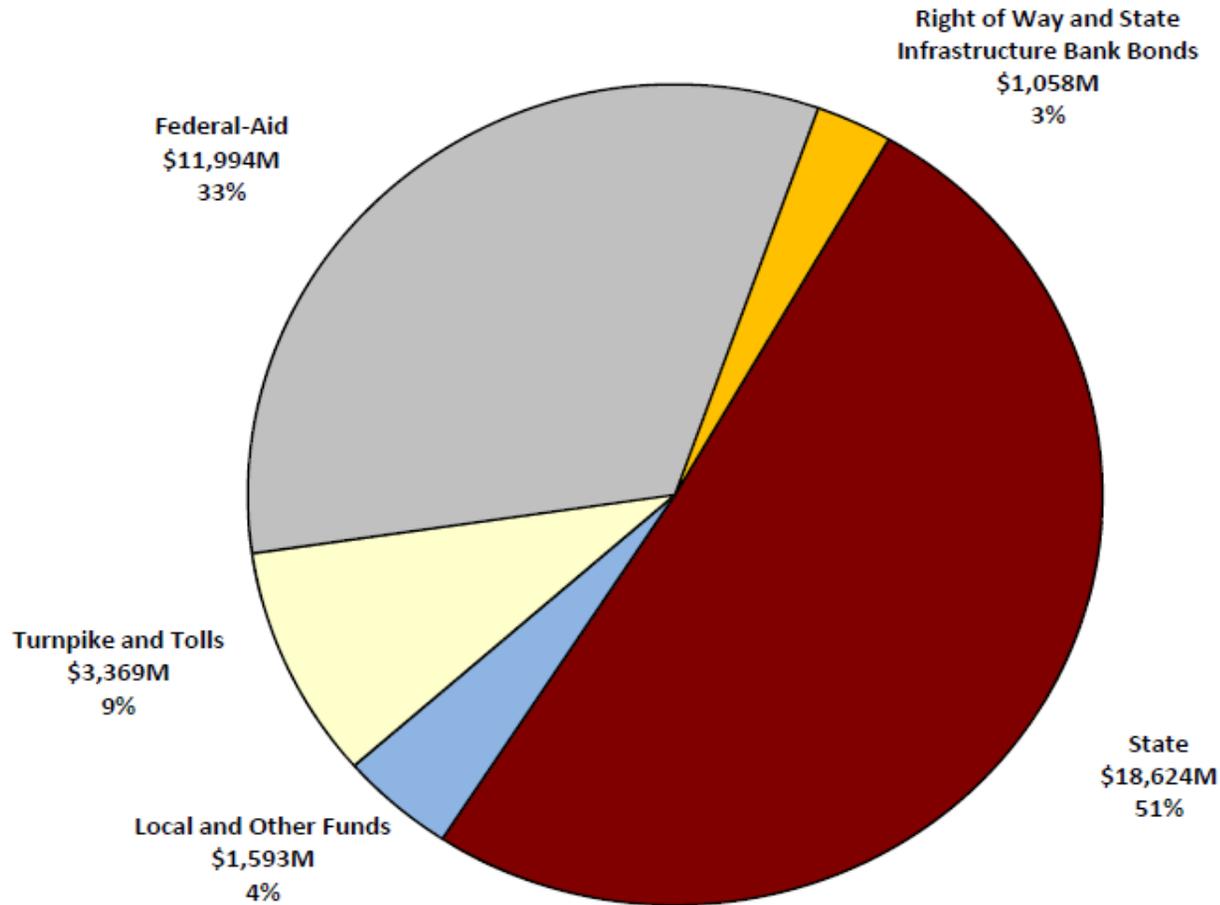

These are Highway and Bridge projects. Contract Classes 1, 7, 9 (CO, District and DB) and include the following projects: bridge, resurfacing, roadway, safety and traffic operations. FY 07-FY11 are actual lettings.....FY12-FY16 are based on current adopted work program

Work Program: The Framework

◆ Policies

- ✓ Legislative Directives
- ✓ Federal Guidance
- ✓ Statutory Fund Allocations
- ✓ Executive Team Guidance
- ✓ Florida Transportation Plan

◆ Established Goals & Standards

- ✓ Performance measures
- ✓ Financial goals
- ✓ Program targets
- ✓ Production goals

Work Program: Finance

- ◆ Develop plan that is balanced to resources available in the State Transportation Trust Fund
 - ✓ Rely on Revenue Estimating Conference information
 - ✓ Forecast other revenues
 - ✓ Allocate funds based on policies, program guidance and plans
- ◆ Five-year finance plan
 - ✓ Ensures commitments can be financed
- ◆ Balanced three-year cash forecast
 - ✓ Ensures funds are available as projects pay out

Work Program: Develop Projects

- ◆ District offices plan, prepare and program projects
 - ✓ Work with partners to prioritize projects
 - ✓ Bottom-up process
 - ✓ Hold public meetings
 - ✓ Consistent with laws, policies, program objectives and priorities
 - ✓ Maximize use of funds

- ◆ Central Office
 - ✓ Statewide needs-based programs
 - ✓ Quality Assurance - test for consistency, compliance, financial feasibility

Work Program: Controls

- ◆ Florida Transportation Commission
 - ✓ In-depth evaluation of the Tentative Work Program compliance
 - ✓ Performance and production review
- ◆ Measurement and Reporting
 - ✓ Performance – ability to deliver projects
 - ✓ Production – amount delivered
 - ✓ Cost of commodities
 - ✓ Use of innovative tools and techniques
- ◆ Internal Financial Audits
 - ✓ By program
 - ✓ By project
 - ✓ By fund

Legislative Review and Approval

◆ Legislative Action

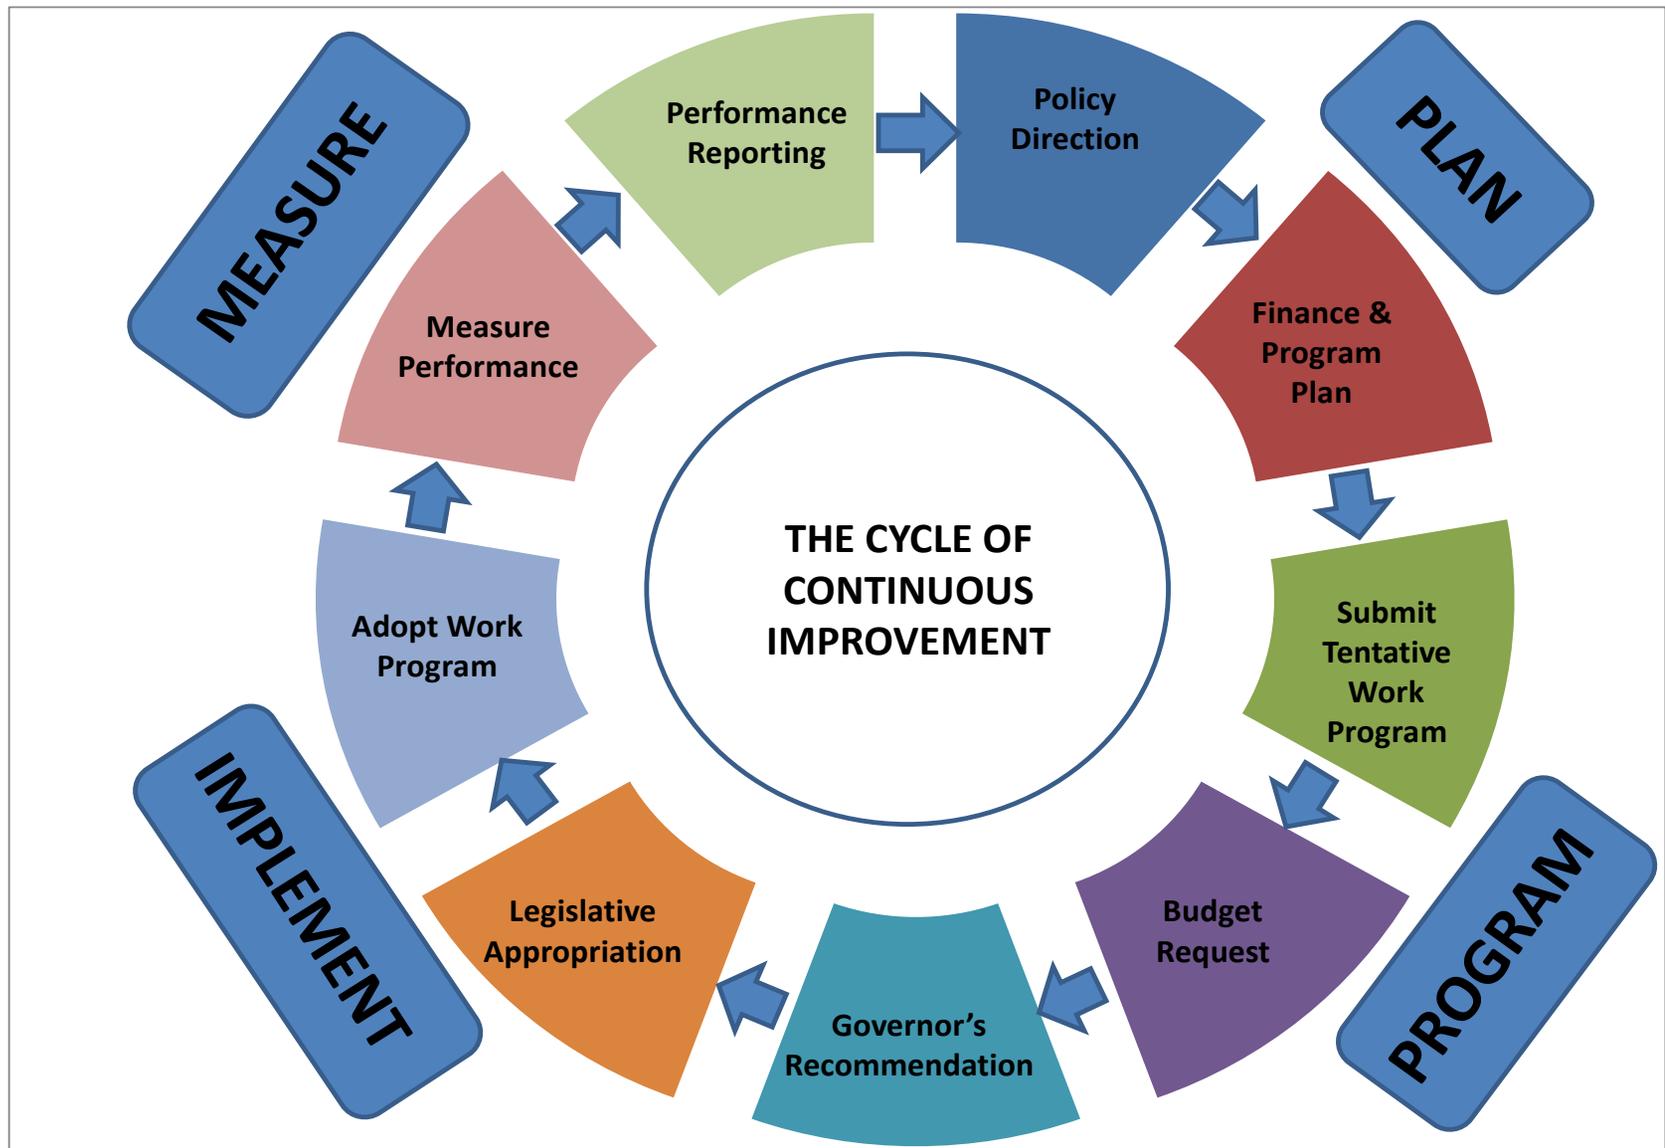

- ✓ Receive and review Five-Year Tentative Work Program
- ✓ Appropriate first year of the Five-Year Plan

◆ Interim Actions

- ✓ 14 days to review and comment on proposed amendments to the Work Program
- ✓ 14 days to review and LBC adopts changes to funding levels for budget categories
- ✓ 14 days to review and LBC adopts the Roll Forward budget amendment

WORK PROGRAM DEVELOPMENT CYCLE

*Florida Department of Transportation
Intelligent Transportation Systems Program*

Brian A. Blanchard, P.E.
Assistant Secretary for
Engineering and Operations

Intelligent Transportation Systems - Defined

- ◆ Use of technology on the state highway system to improve traffic flow, information, and management
 - ✓ Saves lives, time, and money
 - ✓ Reduces congestion
 - ✓ Provides real-time traveler information to motorists

Deployments

◆ Limited-access roadways totaling 2,000 miles

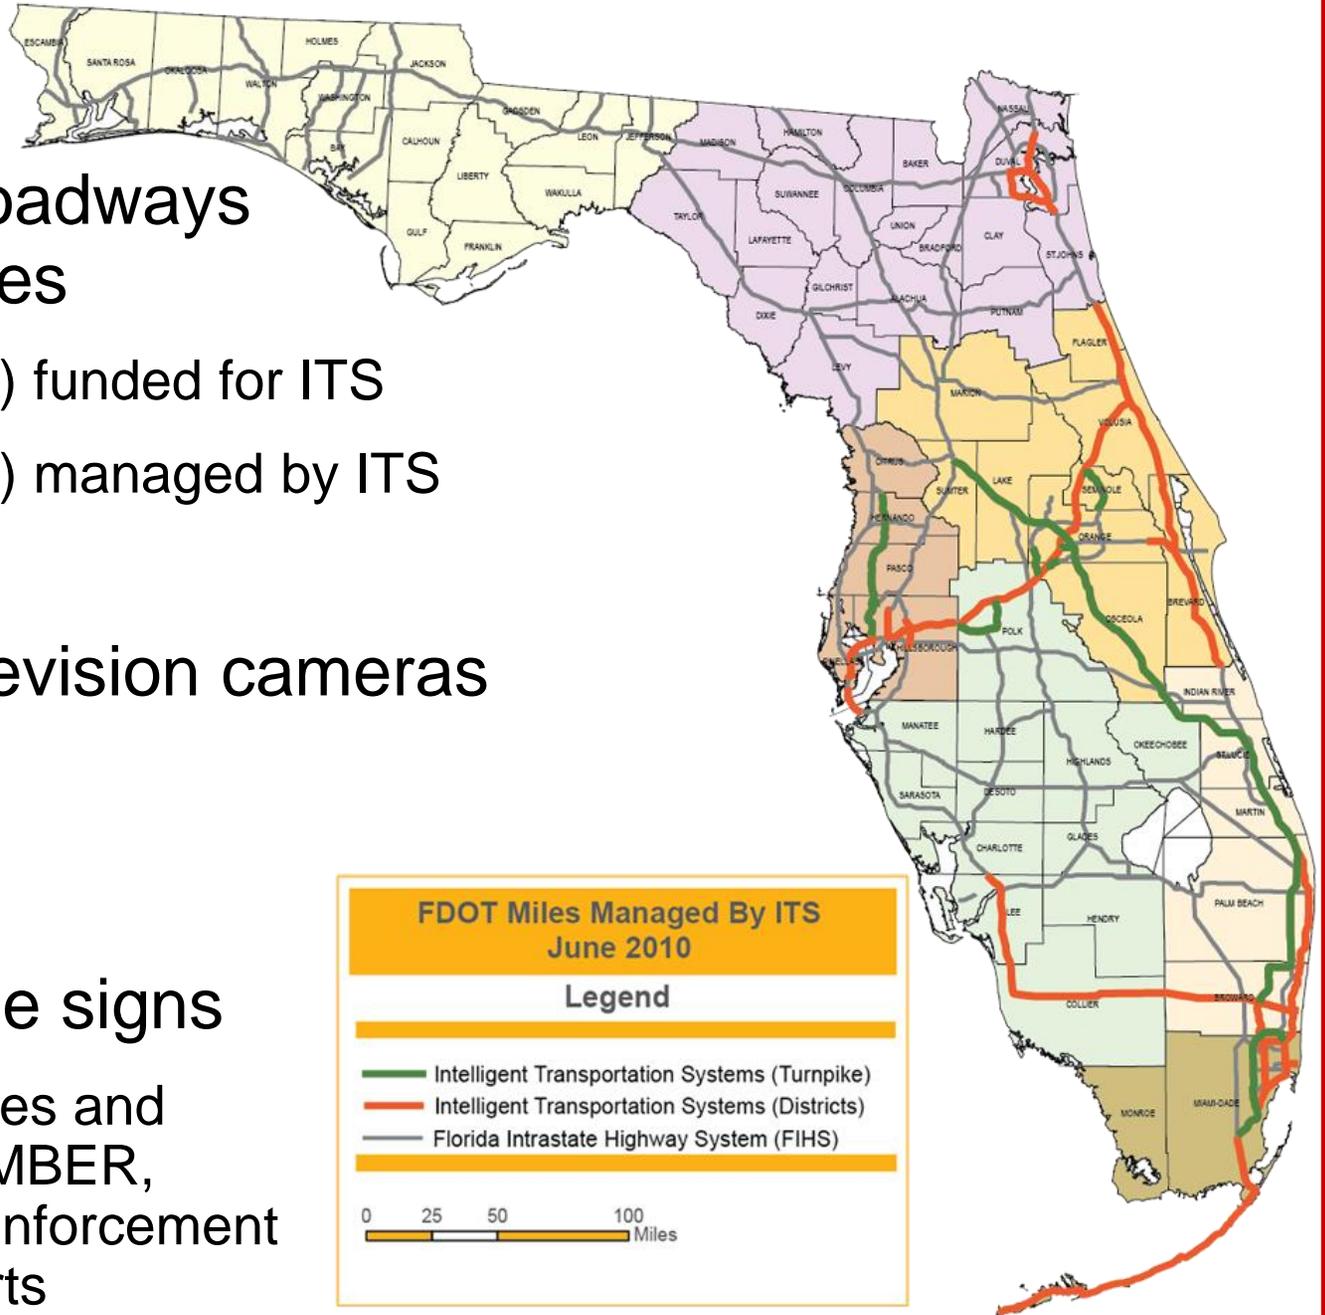

- ✓ 1,600 miles (80%) funded for ITS
- ✓ 1,272 miles (64%) managed by ITS deployed

◆ Closed-circuit television cameras

- ✓ Monitor traffic
- ✓ Detect incidents

◆ Dynamic message signs

- ✓ Provide travel times and alerts, such as AMBER, Silver, and Law Enforcement Officer (LEO) alerts

FL-511 Traveler Information

- ◆ Over 2.7 million calls in 2010
- ◆ More than 400,000 traveler alerts to over 10,000 My Florida 511 subscribers
- ◆ More than 660,000 FL511.com web visits
- ◆ New iPhone, iPad, and iPod Touch app
 - ✓ Audible incident reports
 - ✓ On-screen incident list
 - ✓ Map
 - ✓ Traffic camera views

FL-511 Traveler Information

- ◆ New revenue generating system in 2013 at no cost to FDOT, saving \$1.2 million annually
 - ✓ Generates revenue to pay operations and maintenance, along with future enhancements; possible excess revenue to FDOT

- ◆ Areas of expected future revenue generation:
 - ✓ Sponsorship on 511 phone number, web site, and highway signs
 - ✓ Mobile couponing
 - ✓ Sub-sponsorship of the 511 web site
 - ✓ Special event advertising
 - ✓ Video revenue

Transportation Management Centers

- ◆ Located in all of Florida's major metropolitan areas
- ◆ Monitor traffic and incidents
 - ✓ Post traffic information messages on dynamic message signs
- ◆ Dispatch first responders to incidents
 - ✓ Assists with 90-minute clearance mandate in *Open Roads Policy*

Incident Management

◆ Road Ranger Service Patrols

- ✓ Assist Florida Highway Patrol clearing incidents to reduce secondary crashes, delay, and improve safety for the motoring public and responders
- ✓ Assist disabled motorists

◆ Rapid Incident Scene Clearance

- ✓ Highly innovative, heavy-duty towing and recovery program to safely and quickly restore highway facilities for safe public use
- ✓ Support FDOT's *Open Roads Policy*, which establishes a 90-minute goal for clearance of a motor vehicle crash or incident on Florida's roadways

95 Express

- ◆ Managed lanes on I-95 from I-395 in Miami-Dade County to I-595 in Broward County
 - ✓ SunGuide[®] software determines variable toll pricing
 - ✓ Dynamic message signs provide toll information to motorists
 - ✓ SunPass[®] electronically collects tolls

SunGuide[®] Software

- ◆ Statewide advanced traffic management software
 - ✓ Facilitate traffic and incident management
 - ✓ Disseminate traveler information
 - ✓ Exchange critical information among agencies
 - ✓ Collect and report data

- ◆ Deployed in TMCs statewide

The Future – Connected Vehicle

- ◆ Vehicles provide data to the SunGuide® software through installed roadside equipment
- ◆ SunGuide® sends traveler advisory messages back to vehicles with onboard equipment in presentation region
- ◆ Improve traffic flow on the roadway with signal phasing and timing coordination via roadside equipment

The Florida Senate

Interim Report 2012-139

September 2011

Committee on Transportation

REVIEW REQUIREMENTS AND COSTS FOR ROAD DESIGNATIONS

Issue Description

The designation of roads, bridges, or other transportation facilities for honorary or memorial purposes is a long-standing practice in Florida and, since 1922, over 1,000 of these designations have been legislatively approved. Passage of an honorary or memorial designation of a transportation facility generally involves erecting signs along the state's right-of-way reflecting the designation as described in an act of the Legislature; e.g., "John Jones Memorial Highway." Currently, the Florida Department of Transportation (FDOT or department) bears the costs of erecting and maintaining these signs without a specific appropriation.

This report provides an overview of the statutory requirements and procedures related to establishing honorary or memorial designations on transportation facilities in Florida. In addition, the report reviews the costs of these designations, including sign production, installation labor, maintenance, and other related costs.

Background

All roads which are open and available for use by the public and dedicated to the public use, according to law or by prescription, are declared and established as public roads.¹ The Florida Statutes categorize public roads into four systems: The State Highway System; the State Park Road System; the county road system; and the city street system.² Public roads are subject to numbering, naming and designation as follows.

Numbering and Naming of Roads

Each route on the State Highway System is given an unique number for identification and signed with distinctive numbered Interstate, U.S. or Florida state route shields to guide public travel. The Florida Department of Transportation (FDOT or department) assigns State Road numbers, while counties assigns County Road numbers (with guidance from FDOT). The American Association of State Highway and Transportation Officials (AASHTO) has authority over the numbering of U.S. and Interstate routes. The Florida Highway Administration also has authority over the numbering of Interstate routes.

Specifically, s. 335.08, F.S., authorizes the department "to number and renumber the roads of the State Highway System and to advise the counties and municipalities on the number of the roads in their respective road systems."³ The FDOT may establish a systematic numbering plan, giving even numbers to roads extending in the general direction of east and west, and odd numbers to roads extending in the general direction of north and south.

Local road *names* fall under the jurisdiction of the local government. Section 336.05(1), F.S., grants the commissioners⁴ the authority to name and rename streets and roads, except state roads designated by number by FDOT, lying outside the boundaries of any incorporated municipality.

The actual "naming" or "re-naming" of a state road (apart from its official department State Road number) should be distinguished from honorary or memorial designations. Aside from an act of the Legislature specifically

¹ s. 335.01, F.S.

² ss. 335.01(2)(a-d) F.S.

³ s. 335.08, F.S.

⁴ See s. 334.03(5), F.S., ("Commissioners' mean the governing body of a county.").

providing for such action, an actual naming or re-naming of a state road is accomplished by cooperation of the affected local jurisdiction, the FDOT, and other affected parties. The process requires concurrence of the U.S. Postmaster, public meetings to obtain concurrence of local stakeholders (businesses and residents who would undergo a change of address), a local ordinance, and notification by the local jurisdiction to other parties, such as law enforcement, 911 responders, and utility providers.

Express provisions setting forth the process for naming state transportation facilities, state buildings and other similar facilities in Florida law was established in 1971. Section 267.062, F.S., provides for the naming of state buildings, roads, bridges, parks, recreational complexes, or other similar facilities by the Division of Historical Resources, following consultation with the Florida Historical Commission, after deceased individuals who contributed to the state. The Division of Historical Resources is authorized to recommend “several persons whose contributions to the state have been of such significance that the division may recommend that state buildings and facilities be named for them.” However, the Division’s focus is on facilities of historic significance and not on transportation facilities.

Designations

The Legislature has authority to designate transportation facilities for honorary or memorial purposes. Beginning in 1922, and with few exceptions, honorary designations were accomplished as they are today, through an act of the Legislature.

Blue Star Memorial Highway

Section 335.091, F.S., authorizes the FDOT Secretary, in cooperation with the Florida Federation of Garden Clubs, Inc., to designate certain roads in this state as Blue Star Memorial highways in honor of those individuals who have served or are serving in the Armed Forces of the United States. It is the duty of the executive board of the Florida Federation of Garden Clubs, Inc., to submit to the FDOT Secretary routes on certain roads in the state for designation as Blue Star Memorial highways. Upon designation of a route as a “Blue Star Memorial Highway,” any member club of the Florida Federation of Garden Clubs, Inc., may, with the advice, cooperation, and approval of the department, erect suitable markers and beautify such memorial highway. The department shall file with the Department of State a record of such roads so designated as Blue Star Memorial highways.

Everglades Parkway Scenic Highway

Section 335.092, F.S., designates and declares the Everglades Parkway, which is a portion of State Road 84 commonly known as “Alligator Alley,” in Collier and Broward counties as an official scenic highway of the state.

Scenic Highways

There are several routes designated by the Florida Legislature as “scenic and/or historic,” but these highways were selected on a case-by-case basis and evaluated independently without uniform criteria.⁵ In 1993, State legislation⁶ was passed enabling the State, through the FDOT, to establish an official program for scenic highways. Specifically, s. 335.093, F.S., authorizes FDOT, after consultation with other state agencies and local governments, to designate public roads as scenic highways. Such a designation is intended to preserve, enhance, and maintain significant Florida intrinsic resources. The intrinsic resources identified by the program are: cultural, historical, archaeological, recreational, natural and scenic. Designation under the Florida Scenic Highways Program does not limit the FDOT’s ability to accomplish its mission of moving people and goods or its ability to complete improvements on designated highways. Such designations have no effect and provide no limitation on land use in commercial or industrial areas adjacent to designated highways or on the ability of local governmental entities to control or limit uses in commercial or industrial areas within their jurisdiction.

Highways previously designated “scenic” or “historic” by the Legislature do not automatically qualify for designation as a Florida Scenic Highway. These must be determined eligible and designated according to the process and requirements of the Program.

⁵ http://www.floridascenichighways.com/program/wp-content/uploads/2010/08/Chapt_1_Final.pdf (last visited 8/4/11).

⁶ Ch. 93-164, L.O.F.

In 1994, the department applied for and received a Scenic Byways Grant from the Federal Highway Administration to develop a Florida Scenic Highways Program. The Florida Scenic Highways Program focuses on community-based support and resource protection while seeking to promote regional economic benefits that may result from designation.⁷ These highways strive to educate travelers by “telling a story” that is representative of Florida lifestyles of the past and present.⁸ The ultimate goal of the Florida Scenic Highways Program, however, is to preserve, maintain, protect and enhance Florida’s unique intrinsic resources.

Honorary and Memorial Designations

In 1999, the Legislature enacted ch. 99-385, L.O.F., to clarify the purpose and effect of the designation of roads, bridges, and other transportation facilities for honorary or memorial purposes by the Florida Legislature. Section 334.071, F.S., explains the intent and limitations of legislative designations of transportation facilities for honorary or memorial purposes, or to otherwise, distinguish a particular facility in Florida. Specifically, s. 334.071, F.S., provides:

- Legislative designations of transportation facilities are for honorary or memorial purposes, or to distinguish a particular facility, and may not be construed to require any action by local governments or private parties regarding the changing of any street signs, mailing addresses, or 911 emergency telephone number system listings, unless the legislation specifically provides for such changes;
- When the Legislature establishes road or bridge designations, the FDOT is required to place markers only at the termini specified for each highway segment or bridge designated by the law creating the designation, and to erect any other markers it deems appropriate for the transportation facility.

The Legislature addressed the transportation facility designation process again during the 2003 Legislative Session, and enacted 2003-286, L.O.F., which specified the FDOT may not erect the markers for honorary road or bridge designations unless the affected city or county commission enacts a resolution supporting the designation. When the designated road or bridge segment is located in more than one city or county, resolutions supporting the designations must be passed by each affected local government prior to the erection of markers.

FDOT’s Implementation of Designations

Over the years, the Florida Legislature has designated many roadways in Florida. The designated roads have been under the jurisdiction of either the department or local government.

Records kept in the department's Transportation Statistics Office identify the earliest dedicated roadway as the W.W. Clark Memorial Bridge on State Road 580 between Safety Harbor and Oldsmar. This was dedicated by the State Road Board, the predecessor of FDOT, on July 6, 1922. Since that time, over 1,000 of these designations have been approved and every county and most cities have participated in officially designating some roadway feature (see Appendix). In addition, some roads and bridges have multiple or overlapping designations.

FDOT Costs

The FDOT typically installs two signs per designation at a current estimated cost of \$400 per sign, which includes the cost of materials and labor to manufacture and install the honorary road sign. At a minimum, each designation costs \$800. Exhibit 1 shows the specific breakdown of costs for a memorial roadway designation sign. According to the department, the flat rate charge of \$8 per square foot is inclusive of the fabrication labor, and therefore, the \$64 of material costs includes both the aluminum and the labor needed to make one sign. The department estimates that a simple installation of two signs for a designation requires approximately 5 hours to install at a cost of \$50.97. The FDOT incurs additional costs, which are not included in the itemized costs in Exhibit 1, for dedication ceremonies (when requested by legislative sponsors) to unveil the memorial roadway designation signs.

⁷ http://www.floridascenichighways.com/program/wp-content/uploads/2010/08/Chapt_1_Final.pdf (last visited 8/4/11).

⁸ *Id.*

Exhibit 1 - Designation Sign Costs Breakdown⁹

Materials:	Costs
2' x 4' aluminum sign panel @ \$8/sq. ft. (includes fabrication labor)	\$64
20' of 3.5" aluminum sign post x 2 posts	\$13.46
Z-bar	\$200
4 U-bolts	\$4.92
Material Total	\$282.38
Installation Labor:	
2.7 hours @ \$18.88	\$50.97
Equipment:	
Sign Truck for 2.7 hours @ \$27.00	\$72.90
Total	\$406.25 rounded to \$400/sign

Upon the establishment of a designation, these costs are absorbed within the existing budget authority of the department. In addition, FDOT will also incur the recurring costs of maintaining these signs over time, and for future replacement of the signs as necessary.

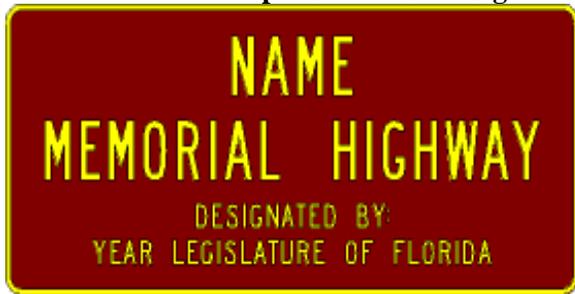

FDOT Guidance

FDOT's Traffic Engineering Manual provides traffic engineering standards and guidelines to be used on the State Highway System by the department's District Traffic Operations Offices. Section 2.35 (Signing for Memorial Roadway Designations) of the manual provides guidance to the districts on the installation of signs when a roadway has been given a memorial designation by the Florida Legislature. Specifically, the manual provides the following:

- **Signing Process**
 - The Florida Legislature designates the roadways based on recommendations from a city or county commission, individual state agencies, or civic groups.
 - Upon official designation by the Florida Legislature, it is the responsibility of the legislative sponsors of the designation to obtain local resolutions in accordance with s. 334.071(3), F.S.
 - After receiving a copy of the local resolution, the department shall begin the process to have the signs installed on the State Highway System.
 - Within the department, the process for the installation of these signs involves the following offices:
 - District Public Information Office
 - District Traffic Operations Office
 - District Maintenance Office
 - State Traffic Engineering and Operations Office
 - Transportation Statistics Office
 - Each district has their own signing process in place, and it varies as to which of the above district offices initiates the process. However, it is important that all the above district offices are notified and kept informed as to the status of roadway designations within their district after each legislative session.
 - Each district will coordinate the installation of the signs with the legislative sponsor of the designation.
- **Sign Installation and Maintenance**
 - Signs shall be installed and maintained by the department on the State Highway System.
 - On non-limited access facilities, one sign per direction shall be installed in accordance with Section 2D.49 of the Manual on Uniform Traffic Control Devices (MUTCD).
 - On limited access facilities, one sign per direction shall be installed in accordance with Section 2E.08 of the MUTCD.

⁹ Provided by FDOT on 8/9/11.

Exhibit 2 – Example of Memorial Sign

The FDOT sign fabrication facility in Lake City manufactures all approved highway signs for the FDOT, including road designation signs, for use on state roads. According to the department's Traffic Engineering Manual, the signs used for memorial roadway designations shall be a brown panel with yellow lettering as shown in Exhibit 2.

Designations in Florida Since 1998

Exhibit 3 shows the total approved honorary designations, corresponding installed signs and the associated simple installation costs since 1998. The exhibit also includes the annual maintenance costs associated with the designations enacted since 1998, which the department estimates at \$2 per sign. Annual maintenance costs encompasses mowing around the sign and the occasional inspection and cleaning of the sign. Lastly, the exhibit shows the sign panel replacement costs assuming an expected sign life of 15 years and based upon the department's estimate of \$200 per sign panel replacement. Since 1998, there have been 312 legislatively approved designations requiring the installation of 738 memorial roadway designation signs.

The FDOT typically installs two signs per designation; however, there are instances when the department is directed to install more than two signs for each designation. For example, based upon the 1999 legislation¹⁰, FDOT installed 112 signs. Chapter 99-403, L.O.F., directed the FDOT to erect signs at appropriate intervals given the length of the highway designation for the "Claude Pepper Highway" designation. The FDOT determined six signs were appropriate for this specific designation.

In addition, the Legislature enacted ch. 99-404, L.O.F., to commemorate the memory of former Governor Lawton Chiles by designating the 1,033 miles Lawton Chiles walked in 91 days during his 1970 campaign from Century, Florida to Key Largo, Florida as the "Lawton Chiles Trail." The department erected suitable markers in each of the newly designated roadways and portions of roadways upon which Lawton Chiles walked (SB 892 described 32 segments of roadway to be designated at two signs per segment, totaling 64 signs). The department was also authorized to erect, as feasible, markers detailing Governor Chiles' walk throughout the state, his commitment to children, and his service to the State of Florida. Those installed signs and corresponding costs were not included in the exhibit. Again during the 2003 and 2010 Sessions, legislation required the installation of far more than the typical two signs per designation.

Each legislative session, numerous road and bridge designation bills are filed in the House of Representatives and the Senate. Exhibit 3 shows that there have been some years when minimal or no designations were enacted. For example, there were no enacted designations during the 2001 and 2002 Sessions; however, approximately 22 and 47 (respectively) were proposed. In addition, although only two designations passed in 2009 and 2011 there were approximately 18 additional proposed designations in 2009 and 47 in 2011 that were not enacted. The trend to designate roads, bridges, and other transportation facilities for honorary or memorial purposes continues to only increase Florida's proliferation of road and bridge designations.

¹⁰ chs. 99-403 and 99-404, L.O.F.

Exhibit 3 – Road and Bridge Designations Since 1998

Year	# Designations/ # Installed Signs	Initial Sign Fabrication and Simple Installation Costs/ Designation	Sign Fabrication and Simple Installation Costs	Annual Maintenance	15-Year Replacement Costs

Findings and/or Conclusions**Review of Other states**

Most states, similar to Florida, have their legislatures vote to decide whether to establish an honorary section of a transportation facility. After that, different states follow different guidelines. In some states the legislatures lay out the criteria for the designation such as the sources of funding, the placement of the signs, whether it can supersede the official state name on maps, and other issues. In others the statutes state that the Department of Transportation will decide the logistics and other issues. Municipalities may give road sections that are completely in their jurisdiction honorary names, and some states, such as Texas, allow them to designate honorary road sections that belong to the state. Below is a list of some representative statutes from around the country.

State	Statutory Policy and/or Requirements
Alabama	Ala. Code § 23-1-8.1: Since 1979, the state will no longer pay for honorary road signs and designations. The Department of Transportation may still allow designations, as long as private groups or city or county governments pay the expenses.
Georgia	Ga. Code § 32-4-3: No state agency may make an honorary designation of any road section unless it is approved by both houses of the legislature and signed by the Governor. Political subdivisions may, however, make honorary designations of sections completely within their jurisdiction.
Illinois	605 ILCS 5/4-105: If the State Police requests in writing the designation of a road section as a memorial for an officer, the State Department of Transportation will work with them, and the officer's labor organization, to designate the highway. Alternate acceptable locations will be determined if the proposed road segment has already been named for another individual. The labor organization representing the State Trooper pays for the effort.
Kentucky	KRS § 177.074: The Secretary of the Department of Transportation may be petitioned by local governments, civic organizations, or interested parties to name an honorary road section. The person or event must have historical or civic significance. Additionally, the state police may petition the Secretary of the DOT to designate a road section as a memorial for an officer. The Secretary's approval of the designations must be confirmed by a joint resolution of the Assembly.
Louisiana	LA – RS 48:192: It is unlawful to name any road without an act of the state legislature.
Mississippi	Miss. Code Ann. § 65-3-38.1: No state highway system may be named after a currently serving elected person or any elected person within 10 years of that person's office. The governing body of each county and municipality must adopt a resolution requesting the Legislature to enact such legislation.
Missouri	V.A.M.S. 227.299: In order to be considered for a memorial designation on the state highway system in the next legislative session, a Memorial Highway/Bridge Naming application must be completed and received by the Missouri Department of Transportation by November 1 along with the appropriate fee (determined by the commission to cover costs of constructing and maintaining the proposed sign), and a list of 100 signatures supporting the highway or bridge naming. The memorial name can be for an event, place, organization or person who has been deceased for more than 2

¹¹ According to FDOT, all signs for the 2010 designations have not yet been installed, the sign fabrications and simple installation costs represents estimated costs (158 signs) based upon legislation that passed.

¹² There were an additional 47 proposed designations in 2011 that were not enacted.

	<p>years; however, no bridge or portion of a highway on the state highway system maybe named or designated after more than one event, place, organization, or person. The application must include the name of at least one current member of the General Assembly who will sponsor the designation. The department will submit this application and all supporting documents to the sponsor listed who will submit the application to the Joint Committee on Transportation Oversight. The committee will approve or deny the application and notify the MDOT of their decision. Erected highway designation signs shall be erected and maintained for a 20 year period. After such period, the signs are subject to removal by MDOT and the bridge or highway may be designated to honor events, places, organizations, or persons other than the current designee. An existing highway or bridge designation processed under the provisions of this section may be retained for additional 20 year increments if, at least 1 year before the designation's expiration, an application to MDOT is made to retain the designation along with the required documents and all applicable fees.</p> <p>Exceptions to the above requirements apply to designations system honoring fallen law enforcement officers, members of the armed forces killed in the line of duty, emergency personnel killed while performing duties relating to their employment, or state employees killed while serving the state.</p>
New Mexico	<p>State Highway Commission Policy 61: Requests for the designation or dedication by name of any New Mexico Department of Transportation building, bridge, interchange, highway, transportation facility or other structure must be submitted to the New Mexico State Transportation Commission for approval. Written requests are considered under certain circumstances. (i.e. (1) the requested designation is intended as a memorial of historical significance or honor of national esteem; (2) (a)the request is accompanied by a local resolution recommending the designation and committing to install within one year the appropriate signage at no cost to the Department and (b) annually inspect, perform all maintenance, repairs and replacement of signs at no cost to the Department; (3) the proposed transportation facility has not been previously designated by name – the commission reserves the right to allow dual designations; (4) recommended name will not cause confusion or safety concerns for traveling public. The Commission is authorized to rescind prior designations when the requesting local government does not perform requisites).</p>
Oklahoma	<p>69 Ok. St. Ann. § 1600: Except for honoring members of the US military that were killed in action, the costs related to erecting signs for a memorial highway section will be paid by the group that requests the designation. The DOT will collect the costs to create, erect, maintain, and replace the signs. This cost is based on the average cost of the signs enacted during the preceding fiscal year.</p> <p>OK Admin code 730:15-1-9: The proposal to name a highway section shall be made for individuals that provided service for the country, the road project, their community, or the state. The honoree must be deceased, but not for more than five years. A road section may be named after only one individual, and may not be changed except in extreme circumstances.</p>
Texas	<p>Texas Trans Code § 225.002: A local government may designate a part of the highway system as a memorial.</p>
Wisconsin	<p>W.S.A. 84.101: The Department of Transportation shall maintain all highway memorials, which may be for the armed services or any of their members. On a statewide basis this maintenance cost to the department shall not be greater than \$2000 per year. If costs run over this, outside funding sources must be found.</p>
Washington, DC	<p>DC ST § 9-204.05: No public space shall be named after a living person or a person that has been deceased for less than two years unless that person was a President or Vice President of the U.S., a U.S. Senator or Representative, A Mayor of the District of Columbia, or a member of the Council of the District of Columbia.</p> <p>DC ST § 9-204.06: When designating a road section after an honorary person, the person's entire name will be used, unless it is over 21 characters, in which case it will be appropriately shortened.</p>

State of Florida Designation Policy for State Symbols

Chapter 15, F.S. designates official state symbols. To date, there are designations for the state flag, seal, motto, tree, fruit, beverage, citrus archive, anthem, song, shell, stone, gem, wildflower, play, animal, freshwater fish, saltwater fish, marine mammal, saltwater mammal, butterfly, reptile, tortoise, air fair, rodeo, festival, moving image center and archive, litter control symbol, pageant, opera program, renaissance festival, railroad museums, transportation museum, soil, fiddle contest, band, Sports Hall of Fame, pie, state maritime museum and state horse.

Being designated an official symbol or icon of the State of Florida is an honor. Such designation, however, precludes any other similar entity, now or in the future, from receiving the designation. Therefore, Governor Bush (Governor Crist also used the guiding principles during his administration) believed that specific criteria should be used to evaluate proposed recipients of official state designations.

Outlined below are the criteria that Governor Bush established to evaluate new proposals for an official state designation. The criteria were established to help clarify Governor Bush's policy on this matter, and dispel any notion that the approval of a particular designation is arbitrary. If the designation does not meet all of the criteria, then favorable consideration by the Governor is doubtful. It is, therefore, strongly recommended that anything proposed for consideration meets all of the criteria listed below.

The policy is intended to be applied prospectively in evaluating proposals for official state designation.

Criteria for Evaluating State Designations

Governor Bush's and Governor Crist's state designation policy is based on the following three guiding criteria: that the designation is appropriate; that the designation has the support of both subject matter experts and the public; and that the designation does not unfairly bestow a competitive advantage on a business at the expense of other Florida businesses.

Guiding Principle # 1: Appropriateness

1. The proposed designee should be of statewide significance, and not merely of local or regional interest.
2. The proposed designee should be unique to Florida or reflect the particular character of our state.
3. The proposed designee should be projected to be of long-term, or even perpetual, importance to the people of Florida.

Guiding Principle # 2: Endorsements

4. The proposed designation should be officially endorsed by an appropriate statewide authority or recognized statewide group(s) with subject matter expertise in evaluating whether a proposed designee meets the first three criteria. Examples of such organizations include, but are not limited to, the Florida Historical Commission, the Florida Council on Arts and Culture (formerly the Florida Arts Council), and the Florida Fish and Wildlife Conservation Commission.
5. Broad statewide public support should be documented by one or more of the following:
 - a. a statewide public input campaign to select the designee from among various candidates (e.g., the 2002 process to select the design for our state quarter issued by the U.S. Department of the Treasury)
 - b. a petition drive (e.g., the process to create a state license plate)
 - c. endorsement from a broad array of media organizations and/or civic groups
6. The proposed designation should sunset within ten years to ensure that the legislature periodically reviews the appropriateness of the designation.

Guiding Principle # 3: Equity

7. The designation should not unjustly benefit a private sector business, whether for-profit or not-for-profit, at the expense of another existing or potential Florida business or other entity.

Additional Sign Installation Costs For Dedication Ceremonies

The FDOT is a decentralized agency in accordance with legislative mandates, composed of the Central Office, seven districts, the Florida Turnpike Enterprise, and the Florida Rail Enterprise. Each of the districts is managed by a District Secretary. The districts vary in organizational structure, but in general each has major divisions for Administration, Planning, Production and Operations.

Each district is allocated maintenance funds. The costs of road designation signs, installation and continued maintenance, as well costs associated with ceremonies, comes from these allocated funds. These funds could otherwise be used for the replacement of other roadway signs that are, for example, at the end of their service life or have been knocked down, or for activities such as guardrail repair and roadway striping.

Senate professional staff, with the assistance of the department, asked each district to quantify examples of dedication ceremony costs in their respective district. There is no standard dedication ceremony and each one varies depending on the local support provided and the magnitude of the ceremony requested for the designation.

Although the responses varied, it may be important to note that several districts reported activities and costs which are not included in the \$800 estimate and may not immediately come to mind when considering the overall costs of road designations. For example, districts reported tasks and costs associated with dedication ceremonies at the sign location, including:

- mowing, litter removal, and other landscaping improvements,
- the rental and installation of shade tents, tables, seating, and podium, and
- maintenance of traffic such as lane closures and temporary caution signage.

Some districts also reported that the District Public Information Officer had conducted other ceremony-related activities such as creating and mailing invitation lists, media packets, and composing speeches. These activities, as well as occasional long travel times for department maintenance personnel, can amount to significant costs that have not previously been included in the fiscal impact assessment of roadway designations.

Off-System Designations

Although local governments have the authority to designate their own roads, occasionally, legislation is proposed to designate a segment of roadway which is off the State Highway System. The department tracks proposed legislative roadway designations each session. For each proposal, department staff prepares a small scale map to verify the accuracy of the proposed roadways and to determine whether the proposal is on the State Highway System and if there are previous designations at the proposed location. Exhibit 4 shows the trend since 1998, wherein there have been 27 Off-Highway designations and an additional 3 partial Off-Highway designations that have been enacted.

Off-System designations require state expenditures to cover expenses that are not on a state facility. In addition, FDOT does not have jurisdiction to maintain the designation. Once the signs are erected, the department usually has no further involvement with the designation beyond replacement of the sign, if requested.

Exhibit 4 - Road and Bridge Designations Since 1998

Year	# Designations/ # Installed Signs	Initial Sign Fabrication and Simple Installation Costs/ Designation	# of Off-System Designations
1998	15/30	\$500	0
1999	22/112	\$500	1, 1 partial
2000	1/2	\$500	0
2001	0	\$500	0
2002	0	\$600	0
2003	28/64	\$800	1, 1 partial
2004	44/88	\$800	2
2005	32/64	\$800	4
2006	27/54	\$800	1
2007	38/76	\$800	5
2008	41/82	\$800	6, 1 partial
2009	2/4	\$800	0
2010	61/158	\$800	7
2011	2/4	\$800	0
Total	312/738		27, 3 partials

Provided by the Florida Department of Transportation

Dual Roadway Designations

There is currently no provision in law restricting one segment of a state road from having multiple or overlapping designations. In addition, there is no limitation on the number of designations in the same area. The department tracks proposed legislative roadway designations each session, including the location and proximity of each proposed designation to current designated roadways. A review of proposed legislative roadway designations during the 2010 and 2011 Sessions yielded the following results:

- In 2010, there were 68 proposed legislative roadway designations; however, only 61 were enacted. The department determined that 29 of the 68 proposed designations were on a road or bridge with a previous designation. The previous designations on the same road or bridge as the proposed designation ranged from at least 1 to over 9; and
- In 2011, there were 47 proposed legislative roadway designations; of which, only 2 were enacted. The department determined that 25 of the 47 proposed designations were on a road or bridge with a previous designation. The previous designations on the same road or bridge as the proposed designation ranged from at least 1 to 6.

Exhibit 5 is an example of a proposed designation in Dixie county (colored purple) during the 2011 Session, which did not pass. The proposed designation encompasses the same roadway where there are five previous designations, three of which travel the entire county (colored red) and two on the Suwannee River Bridge (colored green).

Exhibit 5 – Example of Overlapping Designations

DESIGNATION	STATE ROAD #	US ROUTE #	DESCRIPTION	DEDICATED BY	EFFECTIVE DATE

Filed Legislation to be considered for the 2012 Session

Legislation has been filed to be considered for the upcoming 2012 Session. Specifically, HJR 41 proposes the creation of s. 28, Art. X of State Constitution to prohibit the naming of publicly owned buildings, road, bridge, park, recreational complex, or other similar facilities for any person not deceased for at least five years of time unless approved by four-fifths vote of governmental body enacting such designation, except that no such building or facility may be named for any public officer while that person is in public office.

Options and/or Recommendations

Based upon the findings of this report, Professional Staff recommends the Legislature may wish to consider the following revisions or combination of revisions to the process used to designate roadways for honorary purposes:

1. Amend s. 334.071, F.S., to specify only roadways and bridges on the State Highway System may be designated by the Legislature. Local governments are free to establish honorary designations on facilities under local jurisdiction at their discretion.
2. An entity requesting a designation must obtain a passing resolution in support of the particular designation from the appropriate city or county commission prior to the enactment of legislation.

3. *Require the cost of the designation, and installation, replacement, and maintenance of the signage be borne by an entity other than the FDOT.* Such entity may use a local city, county, public or private group funding source.
4. *Any ceremony associated other than FDOT's normal installation costs shall be borne by the requesting entity, group or local authority.* Disallowing the use of any state funds for any purpose relating to expenses that are incurred for any ceremony associated with the designation. Should a ceremony be appropriate, all expenses encompassing the event shall be borne by the requesting entity, group, or local authority.
5. *Restrict designations to memorials only.* Designations may not be made for a living person or a person that has been deceased for less than two years. Exceptions may include:
 - a. Law Enforcement Officers killed in the line of duty; or
 - b. Military personnel killed in action while on active duty.
6. *Limit each roadway and bridge to only one designation.* Eliminating or preventing overlapping or multiple designations preserves the honor associated with each individual designation.
7. *Establish a sunset for legislative designations.* Florida may want to follow one of the guiding principles for evaluating state designations and also Missouri's lead by establishing an expiration for designations unless reauthorized for retention. The Legislature may wish to establish a policy wherein designations have a sunset of 15 years to ensure that the Legislature periodically reviews the appropriateness of the designation.

The Florida Senate

Issue Brief 2012-223

September 2011

Committee on Transportation

HIGHWAY BEAUTIFICATION AND LANDSCAPING PROGRAM

Statement of the Issue

There are three co-equal tenets of the Florida Department of Transportation's mission¹ to provide a safe statewide transportation system:

- ensure the mobility of people and goods;
- enhance economic prosperity; and
- preserve the quality of our environment and communities.

As statutorily mandated preserving the quality of Florida's environment and communities, the Florida Department of Transportation (FDOT or department) seeks to conserve, protect, restore, and enhance Florida's natural resources and scenic beauty. Such endeavors are guided by the Legislature's requirement for the department to provide for the enhancement of environmental benefits, including air and water quality; to prevent roadside erosions; to conserve the natural roadside growth and scenery; and to provide for the implementation and maintenance of roadside conservation, enhancement, and stabilization programs.²

More specifically, s. 339.24, F.S., requires the department to plan a statewide beautification program for state transportation facilities. The statute limits the expenditure of program funds to those specifically appropriated by the Legislature. Consistent with s. 334.044(26), F.S., no less than 1.5 percent of the amount contracted for construction projects in each fiscal year is allocated to beautification programs. In Fiscal Year 2010, the department programmed \$29,757,657 (amounting to approximately 1.85 percent of construction funds) for highway beautification and landscaping projects.

The issue brief will identify federal and state laws relating to highway beautification and landscaping programs, report expenditures related to the programs and identify potential benefits to the State.

Discussion

Federal Laws

Federal policy established in 23 CFR 752 encourages highway beautification and landscaping. The regulation states:

Highway esthetics is a most important consideration in Federal highway program. Highways must not only blend with our natural, social, and cultural environment, but also provide pleasure and satisfaction in their use. Planning and development of the roadside should be concurrent with or closely follow that of the highway.

Authorization to use federal funds for landscaping and scenic enhancement along Federal-aid highways is found in 23 U.S.C. § 319 (2010). Specifically, it states:

The Secretary may approve as a part of the construction of Federal-aid highways the costs of

¹ Section 334.046(2), F.S.

² Section 334.044(26), F.S.

landscape and roadside development, including ... improvement of strips of land necessary for the restoration, preservation, and enhancement of scenic beauty adjacent to such highways.

Note: Contrary to the concept implied by its title, the U.S. Highway Beautification Act of 1965 (HBA) provides no requirements for highway landscaping or beautification aside from the requirement for vegetation management practices pertaining to outdoor advertising controls.

State Laws

Article II, Section 7(A) of the Constitution of the State of Florida establishes the State's policy to "conserve and protect its natural resources and scenic beauty" and the State has built upon the federal highway beautification effort.

A number of statutes relate to highway landscaping and beautification efforts.

- Section 336.045, F.S., provides for FDOT to adopt uniform minimum standards for design, construction and maintenance of all public streets, roads, highways, and other facilities used by the public for vehicular and pedestrian traffic. The department is directed to consider design approaches which provide for the appropriate aesthetics, and the landscape design and landscape materials around the facilities.
- Section 339.2405, F.S., established the Florida Highway Beautification Council within FDOT in 1987. The Council consists of seven members appointed by the Governor. The duties of the Council are to:
 - provide information to local governments regarding the state highway beautification grants program;
 - accept grant requests from local governments;
 - review grant requests for compliance with council rules;
 - establish rules for evaluating and prioritizing the grant requests. The rules must include, but are not limited to, an examination of each grant's aesthetic value, cost-effectiveness, level of local support, feasibility of installation and maintenance, and compliance with state and federal regulations. Rules adopted by the Council which it uses to evaluate grant applications must take into consideration the contributions made by the highway beautification project in preventing litter;
 - maintain a prioritized list of approved grant requests. The list must include recommended funding levels for each request and, if staged implementation is appropriate, funding requirements for each stage shall be provided;
 - assess the feasibility of planting and maintaining indigenous wildflowers and plants, instead of sod groundcovers, along the rights-of-way of state roads and highways;
 - at the request of the head of the department, review and make recommendations on any other highway beautification matters relating to the State Highway System; and
 - annually submit to the Secretary of FDOT a proposal recommending the level of grant funding.

Section 339.2405(10), F.S., provides the head of the department, after receiving recommendations from the Council, shall award grants to local governmental entities that have submitted grant requests for beautification of roads on the State Highway System and which requests are on the council's approved list. The grants shall be awarded in the order they appear on the Council's prioritized list and in accordance with available funding.

Since 1988, the Council has awarded more than 350 grants to local governments totaling more than \$25 million.

- Section 339.61(2), F.S., establishes legislative intent relating the Florida Strategic Intermodal System, the network of transportation facilities of statewide and interregional significance focused on the efficient movement of passengers and freight. Subsection (2) states:

...The Legislature further finds that our transportation system must be designed and operated in such a way that it preserves the abundance of natural and manmade amenities that have been so successful in attracting new residents, businesses, and tourists to this state.....

Perhaps most significantly, in 1999, the Legislature enacted ch. 99-250, L.O.F., which amended s. 334.044(26), F.S., to establish a minimum percentage, based upon amounts contracted for construction projects, that the FDOT must annually spend for roadside beautification. According to the 1999 legislation, *at least* 1 percent of the amount contracted for construction projects must be annually spent on beautification programs in Fiscal Years 1999-2001. In subsequent years, the amount increased to *at least* 1.5 percent. Modifications were made to the law again during the 2007 and 2009 Sessions.

Presently, s. 334.044(26), F.S., provides for the enhancement of environmental benefits including air and water quality:

- to prevent roadside erosion,
- to conserve the natural roadside growth and scenery; and
- to provide for the implementation and maintenance of roadside conservation, enhancement, and stabilization programs.

No less than 1.5 percent of the amount contracted for roadway and bridge construction projects shall be allocated by the department for the purchase of plant materials, with, to the greatest extent practical, a minimum of 50 percent of these funds for large plant materials remaining funds for other plant materials. All such plant materials must be purchased from Florida commercial nursery stock in Florida. Lastly, the statute provides that the FDOT must develop grades and standards for landscaping materials purchased through this process.

In recent years, a little more than \$30 million has been allocated annually to highway beautification in Florida.

Allocating 1.5 Percent for Landscaping

The state budget has no line item or appropriation for highway landscape projects. To meet the 1.5 percent target defined in s. 334.044(26), F.S., FDOT Districts program and perform landscaping with the same budget used to program roadway and bridge construction. Districts are responsible for programming landscape projects at levels based on the total (100%) construction amount programmed. *The 1.5 percent target is a statewide target, not a target for individual Districts or individual roadway and bridge construction projects.* Consistent with the law, some Districts routinely program more or less than 1.5 percent, and many construction projects have no landscaping included. Decisions about programming landscape projects are often made based on requests from local governments, and their willingness and ability to be responsible for routine landscape maintenance. When there is a shortfall to revenues or a local government will not be able to accept responsibility for maintenance, funds are re-allocated to another project or program within the FDOT work program.

An automated system is used to establish targets for highway beautification equal to 1.5 percent of the amount contracted for roadway and bridge construction for each of the first three years of the tentative work program. The following is considered in reviewing District and Turnpike highway beautification targets:

- The 1.5 percent highway beautification target is a statewide measure. Each District and the Turnpike are expected to share in the programming of work to achieve this target. Exceptions to programming less than the 1.5 percent target may be granted if the statewide target is achieved in a given year or if the target will be met by averaging the first three years of the tentative work program.
- Districts may program highway beautification work above the 1.5 percent target. An exception or lowering of an established target may be granted if the statewide 1.5 percent target is still met, or if other Districts that are under programmed increase their allocation to meet the statewide target.

Allocations that are considered to count toward the 1.5 percent for roadside beautification include the total cost or bid price of landscape pay items. This includes the cost of plant materials, installation, and establishment.

Through the use of these pay items the department is able to assure that to the extent practical a minimum of 50 percent of the funds are used to purchase large plants with the remaining funds for the purchase of other plant materials. For contracts identified as stand-alone landscape contracts or projects, the total contract cost is used. Expenditures for the highway beautification grant program and landscape projects and/or expenditures performed by local agency agreements are included. Landscaping allocations included in lump sum and design build contracts are included, but the calculations of the percent used to purchase large plants are not available to the department. Grassing, sodding, and wildflowers are not included as landscaping costs for compliance with this statute, nor are the Preliminary Engineering, or the Construction, Engineering and Inspection (CEI) costs associated with landscaping.

Florida Department of Transportation Landscape Report

Landscape Plans

Landscape projects are designed to complement and enhance the natural and man-made environment. This may include irrigation systems and site amenities such as street furniture and specialty pavement, fences, and lights. For consistency with s. 334.175, F.S., and for protection of public health, safety, and welfare, and personal safety of construction and maintenance workers, all landscape design plans prepared for or by the department, must be signed, sealed, and certified by the professional landscape architect in responsible charge of the project work. Such professional landscape architect must be duly registered in this state.

To the extent practical, plans consider the following elements:

- Conservation of natural roadside growth (vegetation) and scenery.
- Plants purchased from Florida based nurseries.
- Relocation of existing vegetation.
- Selective clearing and thinning of existing vegetation.
- Natural regeneration and succession of native plants.
- Large plants (plants equivalent or larger than those grown in 5 gallon containers) with combined value of 50 percent or more of the estimated value of all plants specified in the plans.

- Florida native plants with known provenance (original source of plant stock) to be as close to planting site as possible.
- Plant selection and placement that:
 - Improves safety.
 - Minimizes roadside maintenance requirements.
 - Minimizes soil erosion.
 - Avoids impacts to existing and proposed above and below ground utilities.
 - Provides shaded pedestrian, bicyclist, and transit facilities.
 - Reduces storm water runoff volume and velocity.
 - Promotes water conservation.
 - Minimizes impacts to natural areas.
- Reclaimed water for irrigation.
- Recycled and recyclable materials.
- Identification, extent, and treatment method of existing invasive exotic plants.

The concept of developing transportation projects with an eye towards their surroundings has been evolving in the transportation industry since the National Environmental Policy Act of 1969 required transportation agencies to consider the possible adverse effects of transportation projects on the environment. In 1998, the American Association of State Highway and Transportation Officials (AASHTO) and the Federal Highway Administration (FHWA) jointly generated the first working definition of context sensitive design (CSD) which has since been revised into an FHWA program entitled “Context Sensitive Solutions” (CSS) which is defined as:

Context Sensitive Solutions (CSS) is a collaborative, interdisciplinary approach that involves all stakeholders in providing a transportation facility that fits its setting. It is an approach that leads to preserving and enhancing scenic, aesthetic, historic, community, and environmental resources, while improving or maintaining safety, mobility, and infrastructure conditions.³

Though Florida’s highway beautification and landscaping effort is only one component in the effort to improve the appearance of Florida roadsides, and an even smaller part of the FHWA’s CSS program, it may be the most economic, ecologic, and enduring means of meeting the CSS program objectives.

Potential Benefits

Based on a median value of \$30 million expended via the 1.5 percent landscaping provision each year, Florida receives the following economic benefits⁴:

- Creates 549 Florida jobs (direct, indirect, and induced)
- Generates labor income of \$25,510,401
- Output (Revenue) of \$63,621,632
- The Return on Investment (ROI) is slightly higher than 2 to 1

According to the Florida Nursery, Growers and Landscape Association (FNGLA), the 1.5 percent landscaping provision generates green industry jobs including landscape architects and designers, irrigation contractors and designers, landscape and roadside maintenance employees, production nurseries, and landscape contractors.

Although not easily quantified, the environmental benefits of landscaped areas (*e.g.*, oxygen production, pollution abatement, erosion control, etc.) should not be discounted. Additionally, studies⁵ indicate that the presence of trees and green space appear to positively influence both consumers’ attitudes about the character of a place, as well as the prices they are willing to pay for goods and services at proximal businesses.

Issue Brief 2012-224

August 2011

Committee on Transportation

FLORIDA TRANSIT SYSTEMS OVERVIEW AND FUNDING

Statement of the Issue

There are 30 fixed-route transit systems distributed across the state's urbanized areas. Each system is controlled by a local government or a regional association of local governments. While these transit systems play an important role in ensuring the mobility of many Floridians, none are financially self-supporting.

Transit systems include buses, subways, light rail, commuter rail, monorail, passenger ferry boats, trolleys, inclined railways, and people movers. Para-transit services for seniors and for persons with disabilities, as well as vanpool and taxi services operated under contract to a public agency are also considered transit systems. Transit services in Florida consist of two major programs, the fixed-route and demand responsive services. This report focuses on Florida's fixed-route transit systems.

Discussion

National Overview

Mass transportation was predominantly provided by the private sector up until the 1950s and 1960s. However, this began to change in the 1950's due to the mass production of affordable automobiles and heavy investment by the federal government in highway systems. Private providers of transit could not maintain competitive transit systems and many went bankrupt. In 1958, Congress removed any control state governments had previously exercised over the railroads abandonment of various local passenger services, immediately resulting in the closing of several important commuter rail services and in railroads planning to close even more passenger services.

In 1964, the Urban Mass Transportation Act established a program of federal capital assistance for public transit, providing \$375 million in capital assistance over three years. This was the beginning of the program of financial assistance for public transportation managed and run today by the Federal Transit Administration (FTA) within the United States Department of Transportation (USDOT).

While federal assistance for transit has continued to increase, the assistance has grown more specialized. Federal investments have been focused on economic development, job access, increasing transportation person trip capacity, environmental, or quality of life improvements. Federal support for transit includes revenue from motor fuel taxes and general fund appropriations. The amount of federal motor fuel taxes dedicated for transit has totaled 2.86 cents per gallon since 1997.

From 2005 to 2009, the federal share of total capital funding for public transportation ranged from 39 percent in 2005 to 42 percent in 2009. During those same years, the federal share of total funding was consistently in the range of 16 to 19 percent. Other sources of funding included passenger fares, and local and state funding. The percentages are displayed in Table 1 below.

	2005	2006	2007	2008	2009
Total (All Sources)	\$44,091	\$47,053	\$49,851	\$55,420	\$57,147
Operating (All Sources)	\$31,708	\$33,713	\$35,541	\$37,975	\$38,918
Capital (All Sources)	\$12,383	\$13,340	\$14,310	\$17,445	\$18,229
Percent Capital	28%	28%	29%	31%	32%
Federal Share Total	16%	18%	17%	17%	19%
Federal Share Capital	39%	44%	41%	40%	42%

Source: American Public Transportation (APTA) 2011

Nationally, public transportation ridership has increased 11 percent over the past 9 years. In 2009, a total of 10.4 billion passenger trips were provided by the nation's 719 public transportation operators in urban areas. A detailed breakdown of current transit usage by mode is shown in Table 2.

Mode	Trips (Millions)	Percentage of All Transit Trips
Bus	5,452	52.5%
Heavy Rail*	3,490	33.6%
Commuter Rail*	468	4.5%
Light Rail*	465	4.5%
Demand Responsive*	190	1.8%
Trolleybus*	104	1.0%
Other	212	2.0%
Total	10,381	100%

Source: American Public Transportation (APTA) 2011

***Heavy Rail** is a transit mode that is an electric railway with the capacity for a heavy volume of traffic. It is characterized by:

- High speed and rapid acceleration passenger rail cars operating singly or in multi-car trains on fixed rails
- Separate rights-of-way (ROW) from which all other vehicular and foot traffic are excluded
- Sophisticated signaling, and
- High platform loading.

***Commuter Rail** is a transit mode that is an electric or diesel propelled railway for urban passenger train service consisting of local short distance travel operating between a central city and adjacent suburbs. Service must be operated on a regular basis by or under contract with a transit operator for the purpose of transporting passengers within urbanized areas (UZAs), or between urbanized areas and outlying areas.

***Light Rail** is a transit mode that typically is an electric railway with a light volume traffic capacity compared to heavy rail (HR). It is characterized by:

- Passenger rail cars operating singly (or in short, usually two car, trains) on fixed rails in shared or exclusive right-of-way (ROW)
- Low or high platform loading, and
- Vehicle power drawn from an overhead electric line via a trolley or a pantograph.

***Demand Response Service** is a shared-use transit service operating in response to calls from passengers or their agents to the transit operator, who schedules a vehicle to pick up the passengers to transport them to their destinations.

***Trolleybuses** are a transit mode comprised of electric rubber-tired passenger vehicles, manually steered and operating singly on city streets. Vehicles are propelled by a motor drawing current through overhead wires via trolleys, from a central power source not onboard the vehicle.

Florida Overview

Florida's transit experience has followed the national trend. Currently, there are 30 fixed-route transit systems operating in Florida. Four of these systems operate some form of fixed guideway mode (South Florida Regional Transportation Authority, Miami-Dade Transit Agency, Jacksonville Transportation Authority and the Hillsborough Area Regional Transit Authority). In 2009, Florida's transit agencies ranged in size from a 2-vehicle system in Martin County to a 1,023 vehicle system operating in Miami-Dade County. Table 3 shows the share of Florida's fixed-route transit funding from federal, state and local sources.

Table 3—Fixed-Route Transit Funding by Year in Millions of Dollars

	2005	2006	2007	2008	2009
Total (All Sources)	\$1,079	\$1,151	\$1,451	\$1,758	\$1,540
Federal Revenue	\$544	\$618	\$612	\$782	\$730
Federal Percentage	50.4%	53.7%	42.2%	44.5%	47.4%
State Revenue	\$196	\$134	\$288	\$244	\$219
State Percentage	18.2%	11.6%	19.8%	13.9%	14.2%
Local Revenue	\$339	\$399	\$551	\$732	\$591
Local Percentage	31.4%	34.7%	38.0%	41.6%	38.4%

Source: FDOT Program and Resource Plan, Years 2005-2009

In Florida, fixed-route transit ridership has increased 9.89 percent between 2005 and 2009, outpacing Florida’s 7.04% rate of population growth. In 2009, approximately 249 million passenger trips were provided by the fixed-route transit operators. A detailed breakdown of current transit usage in Florida by mode is shown in Table 4.

Table 4—Fixed-Route Transit Ridership by Mode (2009)

Mode	Trips (Thousands)	% of All Trips
Bus	216,098	86.9%
Heavy Rail	18,244	7.3%
Commuter Rail	4,223	1.7%
Light Rail	506	0.2%
Automated Guideway	8,550	3.4%
Vanpool	1,155	0.5%
Total	248,776	100.0%

Federal Transit Administration

The FTA is one of the ten modal administrations within the USDOT. The federal government, through FTA, provides policy guidance and financial assistance to develop new transit systems and improve, maintain, and operate existing transit systems. The FTA oversees grants to state and local transit providers. These grantees are responsible for managing their programs in accordance with federal requirements and the FTA is responsible for ensuring the grantees follow federal mandates, statutes and administrative requirements. The FTA provided federal assistance to Florida’s transit systems in the amount of \$243,444,282 in FY 2007, \$265,838,702 in FY 2008 and \$298,069,656 in FY 2009¹. Federal financial assistance programs which provide the majority of the federal transit investment in Florida are as follows:

- *Urbanized Area Formula Program* is governed by 49 USC 5307 and provides funding to urbanized areas and governors for transit capital and operating assistance in urbanized areas (operating assistance in urbanized areas between 50,000 and 200,000 population) and for transportation related planning.
- *Formula Grant for Other than Urbanized Areas* is governed by 49 USC 5311 and provides funding to states for the purpose of supporting public transportation in areas of less than 50,000 in population. This program is administered by the Florida Department of Transportation (FDOT).
- *Formula Grants for Special Needs for Elderly Individuals and Individuals with Disabilities Program* is governed by 49 USC 5310 and provides funding to states for the purpose of assisting private nonprofit groups in meeting the transportation needs of the elderly and persons with disabilities when the

¹ At the time of publication, 2009 data was the most recently available validated data.

transportation service provided is unavailable, insufficient, or inappropriate to meeting these needs. This program is administered by FDOT.

- *Bus and Bus Related Facilities Program* is governed by 49 USC 5309 and provides capital assistance to eligible recipients on a discretionary basis.

Florida's Transit Office

Florida's Transit Office is part of FDOT and is responsible for identifying, supporting, advancing, and managing cost effective, efficient and safe transportation systems and alternatives to maximize the passenger carrying capacity of surface transportation facilities. The Transit Office consists of three sections (Transit Planning, Grants Administration, and Transit Operations) each of which has specific areas of responsibility:

The *Transit Planning Section* is responsible for developing the state's transit plan. The Transit 2020 Plan identifies three key issue areas in Florida:

- **Transit Service**—The level of transit service for most Floridians is inadequate (with some notable exceptions) and will worsen given current growth trends. Existing levels of transit service make it unattractive as an alternative travel mode for most Floridians except for those who do not have other means of travel. Existing transit services can be fairly characterized as marginal due to limited service hours, infrequent service, and lack of service to many employment centers, commerce, education and recreation, particularly in the suburbs.
- **Transit Funding**—Sustain and expand investment in public transportation from all existing and potential public and private funding sources. Existing transit funding levels from all sources are inadequate. Existing funding streams may not be sufficient to maintain current service and are not sufficient to provide expanded capital, maintenance, and operating programs required to improve overall service quantity and quality.
- **Transit Planning/Policy**—Develop a multi-modal transportation planning process addressing the wide range of policy issues involved in making sound, long-range transportation investment decisions, including technological innovation and the environmental and economic benefits of transit.

The *Transit Operations Section* reviews and implements safety programs, provides technical assistance in the design and procurement of buses for not-for-profit and governmental entities, and training program for mechanics, fleet supervisors and operational transit staff.

The *Grants Administration Section* is responsible for administering some federal and all state transit grants and ensures grant monies are spent in accordance with federal and state laws.

State Funding of Public Transportation

The State Transportation Trust Fund (STTF) which is primarily derived from fuel taxes, motor vehicle/rental car sales taxes/surcharges, and motor vehicle title and registration fees, serves as the source of state funding for public transportation. Section 206.46(3), F.S., requires, in each fiscal year, a minimum of 15 percent of all state revenues deposited into the STTF to be committed annually by FDOT for public transportation projects (aviation, transit, rail, intermodal and seaports). For fiscal year 2011/12, FDOT has committed \$699.6 million for public transportation with \$215.2 million of that total programmed for transit. For the period 2011/12 to 2015/16, FDOT has committed or will commit (on average) 18.7 % of all state revenues deposited into the STTF for public transportation. Over the same time period, 5.7% of the revenues are scheduled for transit projects.

A brief summary of Florida's transit funding programs administered by the Transit Office are:

Fixed-Guideway Transportation Funding is governed by s. 215.615, F.S., and authorizes the issuance of revenue bonds for the financing or refinancing of fixed capital expenditures for fixed-guideway transportation systems (transit on stationary rail or other guideway). The Division of Bond Finance may issue such bonds for up to 50

percent of project costs with funds from sources other than the revenues from FDOT used for remaining costs. FDOT's share of debt services is payable from, and limited to, a maximum of two percent of all state revenues deposited in the STTF. These debt service payments are part of the 15 percent of transportation revenues committed to public transportation as set forth in s. 206.46(3), F.S.

Public Transit Block Grant Program is governed by s. 341.052, F.S., and finances public transit providers eligible to receive funding from FTA's 5307 and 5311 programs and to Community Transportation Coordinators (based upon a 85/15 percent basis). The state participation is limited to 50 percent of the non-federal share of capital projects. Program funds may also be used to pay up to 50 percent of eligible operating costs or an amount equal to the total revenue, excluding farebox, charter, and advertising revenue, and federal funds received by the provider for operating costs (whichever is less).

Transit Corridor Program is governed by s. 341.051(5)(d), F.S., and provides funding to Community Transportation Coordinators or transit agencies to support new services within specific corridors when the services are designed and expected to help reduce or alleviate congestion or other mobility issues within the corridor. The department may fund up to 50 percent of the non-federal share of the costs of such projects which are local in scope. The department may fund up to 100 percent of transit corridor projects that are statewide in scope.

Public Transit Service Development Program is governed by s. 341.051(5)(e), F.S., and provides initial funding for special projects involving new technologies; services, routes, or vehicle frequencies; the purchase of special transportation services; and other techniques for increasing service to the riding public. The program is selectively applied to determine whether a new or innovative technique or measure can be used to improve or expand public transit services. The department may fund up to 50 percent of the non-federal share of the costs of such projects which are local in scope. The department may fund up to 100 percent of transit service development projects that are statewide in scope.

Commuter Assistance Program is governed by s. 341.051(5)(a), F.S., and finances projects which encourage public/private partnerships serving individuals for carpools, vanpools, bus pools, express bus service, subscription transit service, group taxi services, heavy and light rail, and other systems designed to increase vehicle occupancy. The Park and Ride Lot Program complements this program. The department may fund up to 50 percent of the non-federal share of the costs of such projects which are local in scope. The department may fund up to 100 percent of transit capital, intercity bus service, or commuter assistance projects that are statewide in scope.

New Starts Transit Program was created by the 2005 Legislature (SB 360) and provides financial assistance to local governments in developing and constructing fixed guideway and bus rapid transit projects to accommodate and manage urban growth and development. A second purpose of the program is to leverage state funds to generate local transportation revenues and secure FTA New Starts Program funding for Florida projects. The department may fund up to 50 percent of the non-federal share of the costs of such projects.

Intermodal Development Program is governed by s. 341.053, F.S., and provides funding for major capital investments in fixed-guideway transportation systems; access to seaports, airports and other transportation terminals; and construction of intermodal or multimodal terminals.

Transportation Regional Incentive Program is governed by s. 339.2819, F.S., and provides funding for regionally significant transportation facilities which are linked to growth management including transit projects. FDOT will pay for 50 percent of project costs, or up to 50 percent of the non-federal share of project costs for public transportation facility projects.

County Incentive Grant Program is governed by s. 339.2817, F.S., and provides funding to counties to improve a transportation facility (including transit) that is located on the State Highway System or that relieves traffic congestion on the State Highway System.

Florida's Local Transit Systems

The fixed-route transit systems in Florida include:

Bay Area Transportation (Bay Town Trolley) operates the Bay Town Trolley and serves Bay County with deviated fixed route motorbus services in the Panama City Urbanized area. In addition, demand response services are provided (Bay Area Transportation). The Bay County Transportation Planning Organization (TPO) governs both services, contracting with Santa Ynez Valley Transportation Services, LLC for the operation of the Bay Town Trolley and Tri County Community Council for paratransit and operation of Bay Area Transportation.

Broward County Transit (BCT) is an agency of Broward County government part of the Broward County Community Services Department and provides fixed route motorbus service throughout Broward County, directly and via contracts. Connections with Palm Tran (in Palm Beach County), Miami-Dade Transit, and Tri-Rail (commuter rail service) are also provided. In addition BCT also partners with many municipalities within the county to provide Community Bus Service and offers contracted paratransit service.

Collier Area Transit (CAT) began operations in February 2001 and is governed by the Collier County Board of County Commissioners. The County contracts with Tectrans to operate transit services. CAT provides fixed route service in Collier County. Demand response services are provided by Collier Area Paratransit.

Escambia County Area Transit (ECAT) is a department of the county government. A five-member elected Board of County Commissioners governs the department. In addition to providing fixed route motorbus service, ECAT contracts with Pensacola Bay Transportation to provide demand response transportation services.

Gainesville Regional Transit System (RTS) is a department of the City of Gainesville. An elected seven-member Commission governs RTS. The Commission receives input from an advisory board comprised of citizens from the community. RTS serves the City of Gainesville and parts of Alachua County via fixed route motorbus service. Also, RTS provides demand response services throughout the City of Gainesville urbanized area up to three-quarters of a mile beyond its fixed route network through MV Transit.

Hernando Express Bus (Trans-Hernando Express, THE Bus) is service contracted by the County Trans-Hernando, a division of Mid Florida Community Services, Inc., to operate THE Bus, Hernando County's fixed route transportation service. Trans-Hernando reports to the MPO and a five-member board of County Commissioners. The transit system provides fixed route service to the cities of Brooksville and Spring Hill, with a shuttle connecting the two areas. Trans-Hernando Paratransit provides demand response service throughout Hernando County. MidFlorida Community Services, Inc., also provides paratransit service.

Hillsborough Area Regional Transit Authority (HART) serves the transit needs for Hillsborough County, through the operation of motor bus service, as well as a light rail (streetcar) connecting downtown with the Ybor City Historic District. Paratransit Service is provided for the City of Tampa, the City of Temple Terrace, and unincorporated Hillsborough County. Contracted van pool services are also provided. The authority is governed by a twelve-member Board of Directors appointed by the governing bodies of its members and the Governor of the State of Florida. HART also contracts to provide vanpool service.

Indian River Transit (Go Line) is the Indian River public transit system with bus service on 11 fixed routes throughout the county. GoLine is a free service, but passengers are encouraged to make a donation to help support the bus system. Additionally, the **Senior Resource Association** operates Community Coach, a point deviation serving the rural and urbanized portions of Indian River County with motorbus services, demand response, van, wheelchair and stretcher transportation service in Indian County as part of a quasi-government status under the five-member Board of County Commissioners. It is governed by a volunteer Board of Directors.

Jacksonville Transportation Authority (JTA) is an independent authority governed by a seven-member, appointed Board of Directors. The JTA provides services within Duval County and northern Clay County (Orange Park). JTA's transportation services include fixed route motorbus, automated guideway (Skyway Express), paratransit and demand response.

Key West Department of Transportation (KWDOT) is a department of the City of Key West. The Director of Transportation manages KWDOT and reports directly to the City Manager. In turn, the City Manager reports to the seven-member City Commission. The transit system provides fixed route motorbus service to the City of Key West and to Stock Island. Guidance/Care Center, Inc. provides demand response services which are available throughout Monroe County. Shuttle service from a park and ride facility to the downtown historic areas of Key West is provided for tourists.

Lake County Public Transportation (LakeXpress) is a newer Florida transit agency under the Lake County Board of County Commissioners. The County contracts with MV Transportation to operate the service. Services provided include fixed route LakeXpress and the Lake County Connections for demand response service. LakeXpress was started in May 2007 and the County had served as the Community Transportation Coordinator since 2001. The Lake County Department of Economic Development and Community Services provides paratransit service.

Lakeland Area Mass Transit District (Citrus Connection) is an independent district governed by a five-member Board of Directors. The District serves the greater Lakeland area via fixed route motorbus services (Citrus Connection) and demand response services. Polk County Transit Services provides paratransit services.

Lee County Transit (Lee Tran) is an independent division of the Lee County Government governed by the five-member Lee County Board of County Commissioners. Lee Tran provides public transportation services to Lee County via fixed route motorbus services and contracted with Good Wheels, Inc. for demand response services. In addition, Lee Tran contractually provides vanpool service.

Central Florida Regional Transit Authority (LYNX) is an independent authority governed by a Board of Directors. LYNX provides service to Orange County (including Orlando, Winter Park, Maitland, and others), Seminole County (including Altamonte Springs, Casselberry, and Sanford), and Osceola County (including Kissimmee and St. Cloud). LYNX provides fixed route motorbus service, paratransit service, transportation disadvantaged coordination, a five county regional ridesharing assistance program, and vanpool service.

Manatee County Area Transit (MCAT) is a division within the Community Services Department of Manatee County. The Board of County Commissioners governs the division. MCAT provides service to the urbanized parts of Manatee County via fixed route motorbus services, demand response services.

The Council on Aging of Martin County, Inc. (Community Coach) is the public transportation service for Martin County as designated by the Martin County Board of County Commissioners. Community Coach provides a curb-to-curb, advance reservation, shared ride transportation service and also operates deviated fixed route services in Indiantown and Stuart. Paratransit services are provided by Medical Transportation Management.

Miami-Dade Transit (MDT) is the largest transit agency in Florida, operating throughout Miami-Dade County and has three routes extending into southern Broward County and northern Monroe County. MDT is governed by Miami-Dade County. MDT provides county-wide services throughout Miami-Dade County and municipal services to those who live in the unincorporated areas of the county. MDT is responsible for the management, construction, and operation of its services and facilities including Metrobus, Metrorail (a 22-station heavy rail), and Metromover (an automated people mover system that serves the downtown Miami, Brickell and Omni areas). Paratransit is available through MDT's Special Transportation Service. Vanpool service is provided by Miami Lakes VPSI, Inc.

Okaloosa County Transit (The Wave) is operated through contract with the Okaloosa County Board of County Commissioners. The Wave, a fixed route bus system providing service in Fort Walton Beach and Crestview began operating in 2001. In addition, demand response services are provided (Okaloosa County Transit).

The Palm Beach County Transportation Agency (Palm Tran) is a not-for-profit corporation owned by Palm Beach County and is governed by the seven-member Board of County Commissioners. Palm Tran operates fixed route motorbus services throughout Palm Beach County and feeder bus services to the Tri-County Commuter Rail

system. In addition, Palm Tran provides purchased demand response services through the Palm Beach County Paratransit division the Palm Tran Connection and route deviation service through the LINK.

Pasco County Public Transportation (PCPT) is a division of Pasco County. The division is governed by the five-member Pasco County Commission. PCPT provides fixed route motorbus services in the urbanized area of west Pasco County and the municipalities in east Pasco County. Demand response (advance reservation) service is available throughout Pasco County through Pasco County Public Transportation.

Pinellas Suncoast Transit Authority (PSTA) is the public transit provider for Pinellas County. In addition, two express routes travel between Pinellas County and Tampa. PSTA is an independent authority governed by an eleven-member Board of Directors comprising elected officials and private citizen appointees. Demand response service is provided through the Pinellas County MPO.

Polk County Transit Services Division (InterCity Transit)/Winter Haven Area Transit (WHAT) Polk County Transit Services provides administrative support to WHAT and operates two fixed route services as well as demand response and paratransit services for Polk County. It also coordinates with the nine-member WHAT policy board and contracts with Citrus Connection (in Lakeland) to jointly provide the fixed route motorbus system in the City of Winter Haven.

Sarasota County Area Transit (SCAT) is a member of the Sarasota County government and is governed by the five-member Board of County Commissioners. SCAT serves the urbanized portion of Sarasota County (including the cities of Longboat Key, Sarasota, Venice, Englewood, and North Port) via fixed route motorbus service and the Sarasota County Transportation Authority provides demand response service.

South Florida Regional Transportation Authority (Tri-Rail/SFRTA) is an independent authority established by the Florida Legislature. RTA is governed by a nine-member appointed Board of Directors. The SFRTA operates and manages TRI-Rail, the commuter rail system for Broward, Dade, and Palm Beach Counties. Although the TRI-Rail remains SFRTA's primary focal point, SFRTA also operates motorbus services throughout Broward, Miami-Dade and Palm Beach counties as an integrated mode.

Space Coast Area Transit (Space Coast) is a department of Brevard County which is governed by the five-member Brevard County Commission. Space Coast provides transit service throughout Brevard County via fixed route motorbus services, demand response services and vanpool services.

St. Johns County Council on Aging, Inc. (Sunshine Bus) the Sunshine Bus Company is a newer Florida transit agency operated under contract by St. Johns County Council on Aging, Inc. Services provided include fixed route motorbus and demand response operations. The St. Johns County Council on Aging is governed by the St. John's County Commission and is incorporated as a non-profit quasi-governmental agency.

St. Lucie Council on Aging, Inc. (Treasure Coast Connector) operates Community Transit, a demand response system and the Treasure Coast Connector, which provides a regional fixed route transit system connecting in St. Lucie and Martin Counties. In addition, the St. Lucie County Board of County Commissioners provides demand response services through Community Transit.

StarMetro is a department of the City of Tallahassee government and is governed by a Board of Directors comprised of four elected commissioners and one elected mayor. StarMetro serves the City of Tallahassee by providing fixed route motorbus service and demand response service to its community. Evening, weekend, and holiday demand response services are provided via contract.

SunTran is governed by the Ocala/Marion County MPO and provides fixed route motorbus service on five routes in Ocala and Silver Springs Shores. Contracted demand response services are also provided by Marion Transit Services.

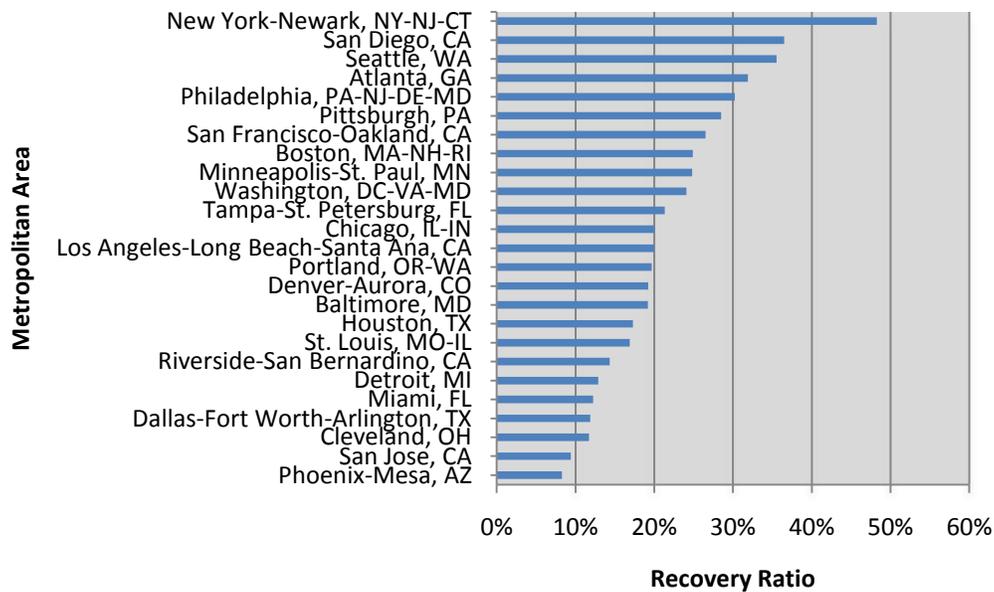

Volusia County Transit (VOTRAN) is governed by a Board of Directors comprised of seven County Council members. VOTRAN provides public transportation services throughout Volusia County via fixed route motorbus services, paratransit services and vanpool services.

Table 5 (page 10) shows a snapshot of Florida’s fixed-route transit systems resources and performance for 2008 and 2009 (the most recent years for which validated information is available).

Farebox Recovery

The farebox recovery ratio (also called fare recovery ratio) of a passenger transportation system is the proportion of the amount of revenue generated through fares by its paying customers expressed as a fraction of the cost of its total operating expenses. Florida’s average farebox recovery rate of 21.8 percent is close to national averages. In many instances, farebox recovery is not the goal of the local government operating and funding a transit system. For example, many of Florida’s fixed-route transit systems offer either free or reduced fare services for students, disabled, Medicaid and senior citizens. These free or reduced fares provide significant savings to many disabled or Medicaid persons who otherwise use door to door services. The figure below shows the farebox recovery ratios for the 25 largest urbanized areas in the United States.

Farebox Recovery Rate for Certain Urbanized Areas

The Florida Senate

Issue Brief 2012-225

September 2011

Committee on Transportation

THE DEVELOPMENT OF STORMWATER TREATMENT FACILITIES FOR TRANSPORTATION PROJECTS

Statement of the Issue

The Florida Department of Transportation (FDOT) operates under federal, state, and local laws and regulations relating to storm water management when developing transportation projects. Stormwater quantity regulations for transportation projects exist to assure that the post-development peak discharge rate and, for land locked basins, volume, does not exceed pre-development levels. Current stormwater quality regulations are based upon a target removal of 80% of the post development total suspended solids loading. Rules currently proposed by the Florida Department of Environmental Protection (FDEP) and United States Environmental Protection Agency (USEPA) would require design methods targeting additional removal of nutrients (nitrogen and phosphorus). Paramount in virtually all treatment plans is the temporary storage of stormwater runoff in ponds or swales. The engineering of stormwater facilities, and the acquisition of properties to accommodate them, begins early in the transportation project's development and can result in the consumption of a sizable portion of a transportation facility's budget.

Discussion

The development of additional impervious surfaces increases both the volume of stormwater runoff and the peak rate of flow resulting from a storm event. Thus, when natural terrain is converted to impervious surfaces, *e.g.*, paving a roadway, stormwater must be managed to avoid an increase in downstream discharge that might cause an increase in downstream flooding. Higher velocity and greater quantity of flow can also cause erosion and impacts to aquatic habitat.

Stormwater runoff from roadways and associated facilities can impact natural waterway systems if not properly managed, in that such runoff typically contains pollutants from motorized vehicle operation. For example, the wearing of brake linings, thrust bearings, engine crankshafts, and tires may result in the deposition of heavy metal particles on the roadway surface. Similarly, the dripping of oil and other engine fluids may deposit additional heavy metals, hydrocarbons, and other pollutants on the roadway surface. Litter, organic debris, and other materials that are common in roadway corridors may also contribute to the pollutant loading in roadway runoff. While the runoff discharged from highways and other parts of the transportation infrastructure represents only a portion of the runoff affecting nearby water bodies, it can contribute to the cumulative degradation of those waters.

Construction activities can also contaminate stormwater and nearby surface waters with silt from disruption of vegetative ground cover; oil, heavy metals, and other pollutants resulting from the operation of construction vehicles; runoff from areas where solvents, paints, and other liquid materials are used and stored; leaching of asphalt emulsion and concrete slurry; and a variety of other sources. These impacts can be avoided if appropriate actions are taken to control construction site runoff quality.

Federal Regulation of Stormwater

To address the negative impacts of runoff, the federal government has implemented regulations with the intent of ameliorating the widespread environmental impacts of stormwater. Three landmark congressional acts guide the federal regulation of stormwater mitigation:

National Environmental Policy Act

The National Environmental Policy Act¹ (NEPA), requires that all major actions sponsored, funded, permitted, or approved by federal agencies undergo environmental planning. This planning ensures that environmental considerations, such as impacts on water quality, are given appropriate consideration in decision-making.²

Clean Water Act

The Water Pollution Control Act,³ better known as the Clean Water Act (CWA), provides for comprehensive federal regulation of all sources of water pollution.⁴ It prohibits the discharge of pollutants from non-permitted sources. The CWA authorizes the U.S. Environmental Protection Agency (USEPA) to administer or delegate water quality regulations covered under the act. In Florida, USEPA has delegated administrative authority of the CWA to FDEP except on tribal and Federal lands.

Endangered Species Act (ESA)

The Endangered Species Act⁵ (ESA) is administered by the U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration's (NOAA) National Marine Fisheries Service. Federal intervention or consultation under the act is triggered by permits, funding or actions on federal land, and by the potential harm, harassment, or taking of listed species, as well as impacts to listed species' habitat. Informal consultation, under Section 10 of the act, requires applicants to comply with the Endangered Species Act (ESA) even if a federal nexus does not exist. The ESA has relevance to surface water quality because of potential effects on listed aquatic species.

Florida's Stormwater Management Practices, Policies, Procedures, and Regulations

In addition to various municipal and county codes regulating stormwater, FDEP, being the lead State agency for regulating water quality, has established State water quality standards and design and performance standards for stormwater management facilities. These standards are incorporated into the rules of the FDEP and the Water Management Districts (WMDs). Depending on the site location, new development will be required (through the permitting process) to meet the FDEP and/or WMD rules. Compliance with these rules assures that new development meets the standards, statutes, and other regulations. It is the policy of the WMDs and FDEP to regulate and control the management and storage of surface waters pursuant to chapter 373, F.S. and Chapter 62-40, FAC. The WMDs generally regulate construction of new facilities and alterations to existing systems. The water quality portion of the WMD permit requires the project be designed such that discharges meet the performance standards established in Chapter 62-40, FAC. The FDEP or WMDs may also impose additional water quality treatment requirements in order to meet specific Total Maximum Daily Load (TMDL) or Basin Management Action Plan (BMAP) requirements, typically involving treatment to remove additional nutrient (nitrogen and phosphorus) loading.

FDOT has specific policies, procedures, guidelines, and regulations for protecting surface water. Chapter 14-86, FAC, Drainage Connections, provides standards and procedures for drainage connections from the properties adjacent to the FDOT Rights-of-way.

Addressing the Effects of Stormwater from Transportation Projects

Transportation projects, which tend to be linear in nature and receive runoff from numerous adjacent properties, may encompass multiple drainage basins and impact multiple receiving waters. The impacts of stormwater runoff from state-owned rights of way vary widely, depending on surrounding land use, climate patterns, soil characteristics, receiving water characteristics, and other local factors. The construction of roadway improvement projects may also impact receiving waters if soil erosion is not properly managed during the construction process.

¹ 42 U.S.C. 4321

² NEPA implementing regulations are at 23 CFR 771 (FHWA) and 40 CFR 1500-1508 (CEQ). For details on NEPA procedures, see Chapters 410, 411, and 412.

³ 33 U.S.C. 1251 et seq.

⁴ Implementation requirements for CWA Sections 303(d), 305(b), 401, 402, and 404 are described in Section 430.06.

⁵ 7 U.S.C. 136, 16 U.S.C. 1531 et seq.

The key to controlling problems created by stormwater runoff is the application of best management practices (BMPs). BMPs are defined as physical, structural, and managerial practices that, when used individually or in combination, prevent or reduce pollution of water and attenuate peak flows and volumes. BMPs targeting the types of problems discussed above are typically categorized as temporary or permanent. Temporary BMPs (e.g., mulching of bare ground, silt fencing, and spill containment) are typically used only during the construction phase of a project. Permanent BMPs are used to control and treat runoff throughout operation of the highway, park-and-ride lots, rest areas, or other transportation project sites. Some BMPs, such as detention ponds, may function in both temporary and permanent BMP capacities.

Permanent runoff treatment BMPs include facilities that remove pollutants from runoff by dilution, simple gravity settling of particulate matter, filtration, biological uptake, and/or soil adsorption. Typical examples include wet detention ponds, dry retention ponds, underground exfiltration trenches (also called French drains), and vegetated swales. These BMPs also reduce the peak rate of runoff during a storm event by storing the flow and releasing it at a slower rate, thus protecting downstream properties from increased flooding. Permanent BMPs are used to treat highway runoff for the design life of the project site.

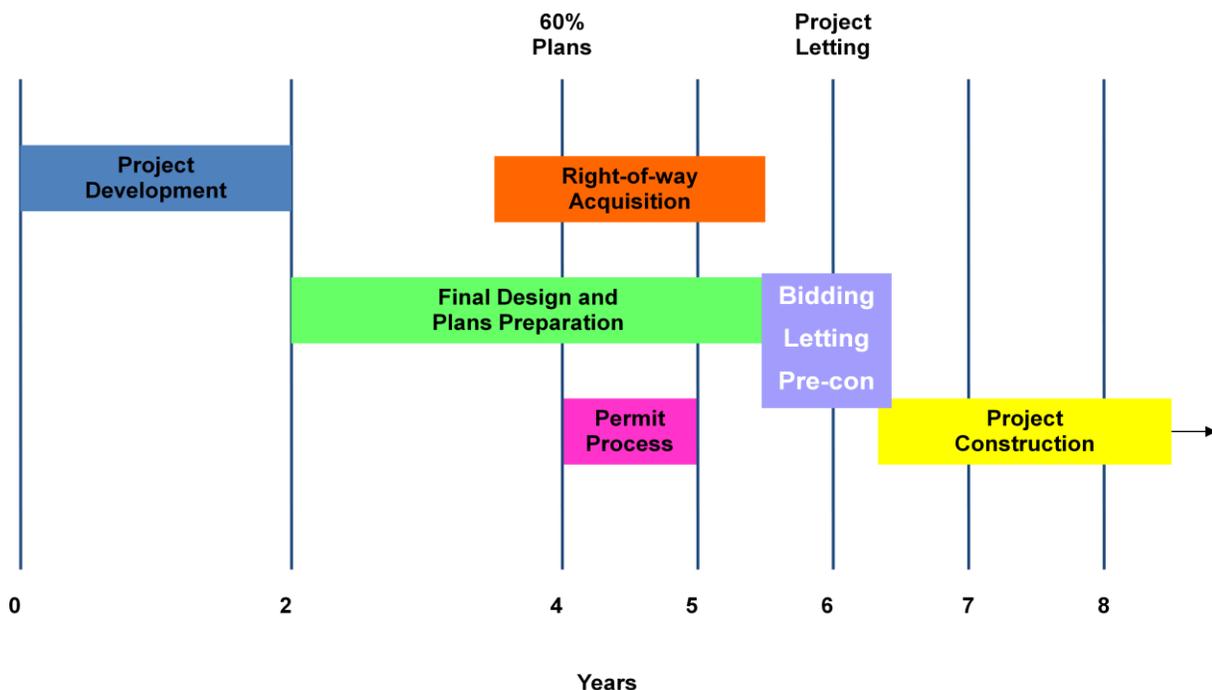

Stormwater Management Design Overview

Most major transportation projects are developed over many years in phases. The typical project is developed by progressing through the following phases:

1. Planning
2. Project Development and Environment (PD&E)
3. Design
4. Right of Way
5. Construction.

A typical timeline for major projects is illustrated below:

FDOT Project Timeline

The development of the design for stormwater management facilities for a transportation project involves a significant amount of data gathering, as well as extensive coordination among various individuals and agencies. It typically begins in the PD&E phase. Along with other project development tasks, the results of the PD&E Study are used by FDOT to document that proposed improvements to an existing corridor or the establishment of a new corridor comply with NEPA requirements. The PD&E Study process incorporates the development of various alternatives for the proposed roadway improvements. As part of the development of these roadway alternatives, various stormwater management practices are considered. These practices include the following:

- *Swale systems*: This type of system consists of a series of road side swales sometimes referred to as linear ponds for the storage of stormwater. Two types of swale systems are typically utilized, dry retention and dry detention. These systems typically do not require additional right-of-way acquisition with their associated stormwater facilities being contained within the road right-of-way template. Note: This type of system poses moderate maintenance concerns with mowing and standing water.
- *Adjacent Property Stormwater Management Systems*: On some occasions proposed or existing residential subdivisions or commercial properties have been designed to accommodate adjacent roadway drainage into their respective stormwater management systems. This typically occurs as part of the municipal or county development process. These types of requirements are sometimes imposed and documented in the adjacent property's "Development Order" as mandated by the respective municipality or county issuing the permits for construction of the respective development. When this situation occurs, the need for additional right-of-way for the roadway stormwater management system is typically reduced. However, storage and flowage easements may be required. If this has not been required by the County or Municipality, in some instances the department has been able to negotiate receipt of its stormwater with the developer of the adjacent property. Note: This type of system poses low maintenance concerns, since maintenance is typically handled through maintenance agreements with the property owner assuming the maintenance responsibilities. The agreements however, must include language that if the property owner is not maintaining the facilities, the department has the legal right to enter onto their property, correct the situation, and back charge the property owner.
- *Isolated Wet or Dry Stormwater Pond Systems (Positive Outfall Systems)*: When isolated ponds are required to meet the stormwater management requirements of a project, additional right-of-way is necessary. These ponds can be constructed as either wet or dry detention or retention systems. Each system type has its advantages and disadvantages which can result in large right-of-way needs depending on the project parameters. These types of systems typically possess an outfall which influences the amount of right-of-way required for the pond. The key issue with the use of a dry system is to have adequate hydraulic conductivity of the soil and proper separation between the pond bottom and the seasonal high ground water table. Note: This type of system requires ongoing maintenance.
- *Isolated Wet or Dry Stormwater Pond Systems (Closed Basin Systems)*: This type of system is similar to the positive system in that right-of-way is required outside the roadway typical section. Thus additional right-of-way is required for the construction of isolated ponds. The only exception with this system is that the respective pond is located within a drainage basin that does not have a positive outfall (landlocked areas). These types of systems typically are required to contain larger storm events and thus require more right-of-way to meet the needs of the project. Note: This type of system requires ongoing maintenance.
- *Exfiltration Trenches (French drains)*: This type of system consists of a piped drainage system with sections of perforated pipe surrounded by a rock filled trench wrapped in filter fabric. Stormwater is typically exfiltrated into the ground through the porous stones utilizing the head differential between the water level in the trench and the ground water table. Stormwater storage capacity is attained within the trench. Use of this type of system is typically seen in an urban environment, with soils containing a high ability to conduct groundwater. This system does not typically require right-of-way acquisition for the construction of the stormwater management facilities. Note: This type of system requires high maintenance and may not continue to function as long as other BMPs.

Pond Siting

Once it has been determined what stormwater management system is necessary to meet project requirements, the process known as "Pond Siting" will commence. The "Pond Siting" process documents and justifies the selection of a specific site for the construction of stormwater management facilities. The evaluation of various candidate sites weighs and balances numerous factors such as cost, maintainability, constructability, public opinion, aesthetics, environmental impacts, social impacts, and cultural impacts. The costs of right of way, environmental impacts, construction, and long term maintenance are usually the easiest factors to estimate and compare. Other factors are more subjective and qualitative. Numerous design features (depth, size, shape, treatment method, etc.) can be modified to accommodate a pond site. However, hydraulic constraints may preclude the use of some sites, *e.g.*, a site may be higher than the facility from which it is to accept runoff. Alternate sites and their different design features will usually result in different costs and impacts.

The Pond Siting process encompasses a significant amount of coordination between numerous engineering and environmental disciplines. The amount of work effort can vary significantly based on environmental issues and project location. The documentation produced by the pond siting process is used for the justification of any necessary right-of-way acquisition associated with meeting the stormwater management requirements of a proposed roadway project. This justification is also required to satisfy the public necessity requirement in an eminent domain lawsuit. Because a broad range of subjects is involved, FDOT uses a multi functional team approach to select the most appropriate pond site. This team approach usually includes representatives from the following offices:

- Right of Way,
- Design,
- Drainage,
- Environmental Management,
- Maintenance,
- Construction, and
- Legal (eminent domain).

At times other units may provide critical information to the evaluation process.

The FDOT Stormwater Management Facility Handbook (January 2004) provides the following pond siting selection considerations:

1. Use existing FDOT properties or other state owned property, if feasible.
2. Minimize the number of parcels required. For example, avoid using part of two parcels when the pond will fit within one.
3. Generally, property owners prefer to have ponds placed toward the rear of their property. For parcels that abut the roadway right of way, the portion of the parcel next to the road is usually the most expensive.
4. Avoid splitting a parcel, thus creating two independent parcel remainders.
5. Consider the parcels identified by the right of way office. Even if a parcel is not large enough to provide all the stormwater management, it may be large enough to provide the treatment for stormwater quality. Or it could replace treatment and attenuation for parcels adjacent to the road that will have their ponds removed because of the road improvements
6. Avoid wetlands.
7. Avoid archaeological sites and historic structures listed on or eligible for listing on the National Register of Historic Places.
8. Consider a joint use facility (one the department and another entity share) as an alternate, if one is feasible.
9. Generally, do not consider an option that requires water quality monitoring. Historically this has been very expensive.
10. Stormwater treatment systems must be at least 30 meters (100 feet) from any public water supply well. (Chapter 62-555, F.A.C.)
11. Locations with billboards are usually expensive.

The right of way required for a stormwater management system site varies with the amount of additional impervious area and associated additional runoff, the ground line and ground water elevations at the site, the proposed road elevations, and sometimes soil conditions and other factors.

Right Of Way Acquisition

Once the stormwater management system site has been identified the FDOT Office of Right of Way's acquisition program is responsible for acquiring the property needed by the department. Soon after owners are identified and appraisals are prepared, negotiations will begin. Negotiations for the purchase of private property are conducted in strict compliance with both federal and state law. Property owners are notified of their rights prior to, or at the time the department delivers its offer to purchase. The amount of the offer will not be less than the department's estimate of the value of the property being acquired. Owners are guaranteed no less than 30 days from the time the offer is made to consider the offer before an eminent domain suit will be filed. The department will pay the owner's reasonable cost for an attorney to represent them during negotiations and for appraisal and other experts necessary to establish the value of their property. If an agreement is reached, department acquisition staff will coordinate or conduct the real estate closing. The department will pay all closing costs associated with the title transfer.

If the department and the property owner cannot agree on the price to be paid for the owner's property, the department may choose to file an eminent domain suit to acquire the property. Throughout the litigation process the department will continue to negotiate with the land owner and their attorney. If agreement can be reached, the litigation will be ended and the agreed amount will be paid. Ultimately, if the owner and the department cannot agree, a jury may decide the amount the department must pay for the acquired land. The department will pay all property owners expenses for an attorney and other necessary experts throughout the condemnation process.

SENATOR STEPHEN R. WISE

5th District

Memorandum

To: Senator Jack Latvala
Chair, Senate Committee on Transportation

Mr. Rivers H. Buford, III
Staff Director, Transportation

From: Senator Stephen R. Wise

A handwritten signature in cursive script that reads "Stephen R. Wise".

Subject: Committee Meeting Absence

Date: September 28, 2011

Please excuse me from attending the Senate Committee on Transportation scheduled for October 4, 2011. Due to a scheduling conflict, I will be unable to attend the Committee meeting.

I am most grateful to Senator Latvala for honoring my request.
