1. **Title of Project**: Tallahassee - Water Tower to Sustain Water Supply During Hurricanes

2. **Senate Sponsor**: Bill Montford

3. **Date of Submission**: 01/17/2018

4. **Project/Program Description**:
   
   This project consists of the design and construction of a 1-million gallon elevated water storage tank for the Northwest region of Tallahassee. This region is currently served by a 0.5-million gallon tank that is undersized to meet the storage needs of this region. It is also reaching the end of its useful life due to the age of the asset. The new tank will be optimally located, appropriately sized and provide redundancy in the system should the power be lost (during hurricanes and other emergency events) at the wells that supply the Northwest region of Tallahassee. Should power be lost at the two major supply wells in this region, the available storage in the new tank would allow the City to meet customer demands and provide adequate fire protection for a period of time until the power can be restored.

5. **State Agency Contacted?** No
   
   a. If yes, which state agency?
   
   b. If no, which is the most appropriate state agency to place an appropriation for the issue being requested?
      
      Department of Environmental Protection

10. Is future-year funding likely to be requested?
   No

11. Program Performance:

a. What is the specific purpose or goal that will be achieved by the funds requested?

   Construction of a new elevated water storage tank, which will sustain and improve the City's ability to meet the fire flow needs and to protect the lives, wealth and welfare of over 15,000 residents during emergency events such as hurricanes. The new tank will also provide additional capacity and required storage needs for this portion of the city’s distribution system to meet the water supply demands through 2035.

b. What are the activities and services that will be provided to meet the intended purpose of these funds?

   Design and construction of a new 1-million gallon elevated drinking water storage tank in the NW area of Tallahassee.

c. How will the funds be expended?

d. What are the direct services to be provided to citizens by the appropriations project?

Continuation of water service for approximately 15,000 City of Tallahassee drinking water customers during emergency events such as hurricanes. Additionally, the new tank will provide increased drinking water system pressure and fire flow capacity.

e. Who is the target population served by this project? How many individuals are expected to be served?

Drinking water customers (approximately 15,000 customers in NW Tallahassee to be served)

f. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?

The expected benefit is continuation of water service in the Northwest region of Tallahassee during power outages caused by hurricanes and other emergency events. This outcome will be measured using power outage records and continuous flow pressure monitoring.

g. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for in the contract?

Full reimbursement of funding allocated.

12. The owner(s) of the facility to receive, directly or indirectly, any fixed capital outlay funding. Include the relationship between the owner(s) of the facility and the entity.

N/A
