# HOUSE OF REPRESENTATIVES STAFF ANALYSIS

BILL #: HB 743 Fracturing Chemical Usage Disclosure Act

SPONSOR(S): Rodrigues

TIED BILLS: HB 745 IDEN./SIM. BILLS: SB 1028

REFERENCE	ACTION	ANALYST	STAFF DIRECTOR or BUDGET/POLICY CHIEF
1) Agriculture & Natural Resources Subcommittee	11 Y, 0 N	Renner	Blalock
Agriculture & Natural Resources Appropriations     Subcommittee			
3) State Affairs Committee			

# **SUMMARY ANALYSIS**

Hydraulic fracturing (fracking) is the use of fluid and material to create or restore fractures in a formation in order to stimulate production from new and existing oil and gas wells.

The composition of a fracturing fluid varies with the nature of the formation, but typically contains mostly water, a proppant that keeps the fractures open such as sand, and a small percentage of chemical additives. The number of chemical additives used in a typical fracture treatment varies depending on the conditions of the specific well.

Currently, there is no federal law or regulation that requires the disclosure of the chemicals added to the fluid used in hydraulic fracturing. In May, 2012, the Bureau of Land Management published a proposed rule that would require disclosure of the content of fracturing fluids used on lands managed by the agency. Of the states that produce oil, natural gas, or both, at least 15 require some disclosure of information about the chemicals added to the hydraulic fracturing fluid used to stimulate a particular well. Currently in Florida, there is no hydraulic fracturing being done.

The bill creates the "Fracturing Chemical Usage Disclosure Act." The bill directs the Division of Resource Management (Division), under the Department of Environmental Protection (DEP), to establish and maintain an online hydraulic fracturing chemical registry for all wells on which hydraulic fracturing treatments are performed.

The registry must include, at a minimum, the total volume of water used in the hydraulic fracturing treatment and specific chemical ingredients for each well on which hydraulic fracturing treatments are performed, as provided by a service company or chemical supplier, or by the well owner or operator if the owner or operator provides such chemical ingredients. The Division may not require chemical ingredients to be identified by concentration or based on the additive in which they are found. The registry and information provided must be accessible to the public through the Division's website.

The owner or operator of a well on which hydraulic fracturing treatment is performed must report information as required by the Division. The well owner or operator must notify the Division of any chemical ingredients not previously reported that are intentionally included and used for the purpose of creating a hydraulic fracturing treatment for the well.

A service company that performs a hydraulic fracturing treatment on a well or a supplier of an additive used in a hydraulic fracturing treatment on a well must disclose the chemical ingredients used to perform the treatment to the owner or operator of the well. The reporting and disclosure requirements in the bill do not apply to certain ingredients that were not purposefully added or occur incidentally.

The bill authorizes the DEP to adopt rules to administer the registry.

The bill appears to have an insignificant fiscal impact on state government. The bill does not appear to have a fiscal impact on local government.

This document does not reflect the intent or official position of the bill sponsor or House of Representatives. STORAGE NAME: h0743a.ANRS

#### **FULL ANALYSIS**

#### I. SUBSTANTIVE ANALYSIS

#### A. EFFECT OF PROPOSED CHANGES:

# **Current Situation**

Hydraulic fracturing (fracking) is the use of fluid and material to create or restore fractures in a formation in order to stimulate production from new and existing oil and gas wells. The pressurized mixture causes the rock layer to crack. The fissures are held open to allow natural gas to flow up the well. Fracturing allows for extended production in older oil and natural gas fields. It also allows for the recovery of oil and natural gas from formations that are very hard to produce, such as shale.

The composition of a fracturing fluid varies with the nature of the formation, but typically contains mostly water, a proppant to keep the fractures open such as sand, and a small percentage of chemical additives. The number of chemical additives<sup>1</sup> used in a typical fracture treatment varies depending on the conditions of the specific oil and gas well. Some chemical additives may be harmless, while others may be hazardous to health and the environment. A typical fracture treatment will use very low concentrations of between 3 and 12 additive chemicals depending on the characteristics of the water and the shale formation being fractured. Each component serves a specific, engineered purpose.<sup>2</sup>

Currently, there is no federal law or regulation that requires the disclosure of the chemicals added to the fluid used in hydraulic fracturing. In May, 2012, the Bureau of Land Management published a proposed rule that would require disclosure of the content of fracturing fluids used on lands managed by the agency.<sup>3</sup>

Of the states that produce oil, natural gas, or both, at least 15 require some disclosure of information about the chemicals added to the hydraulic fracturing fluid used to stimulate a particular well. State requirements vary widely. Generally, they fall into four overlapping categories: (1) which parties must disclose information about chemical additives and whether these disclosures must be made to the public or a state agency; (2) what information about chemicals added to a fracturing fluid must be disclosed, including how specifically parties must describe the chemical makeup of the fracturing fluid and the additives that are combined with it; (3) what protections, if any, will be given to trade secrets; and (4) at what time disclosure must be made in relation to when fracturing takes place.

In Florida, ss. 377.01-377.43, F.S., regulate oil and gas resources.<sup>4</sup> A permit is required to drill the well necessary to explore oil and gas reserves. If oil is discovered, which only occurs 3% of the time according to the DEP, the drilling permit covers 90 days for testing. Hydraulic fracturing could occur during this time as part of a workover request, pursuant to Rule 62C-25, F.A.C. If the well is successful, the DEP issues an operating permit following testing. Currently, there is no hydraulic fracturing being done in Florida. One reason is the existing reservoirs are carbonate rock, which is naturally brittle and responds better to acid injection.

# **Effects of Proposed Changes**

The bill creates the "Fracturing Chemical Usage Disclosure Act." The bill directs the Division of Resource Management (Division), under the DEP, to establish and maintain an online hydraulic fracturing chemical registry for all wells on which hydraulic fracturing treatments are performed.

<sup>&</sup>lt;sup>3</sup> CRS Report for Congress on 'Hydraulic Fracturing: Chemical Disclosure Requirements" (June 19, 2012). On file with staff.

<sup>&</sup>lt;sup>4</sup> Rules 62C-25, 62C-26, 62C-27, and 62C-28 promulgate these statutes.

The registry must include, at a minimum, the total volume of water used in the hydraulic fracturing treatment and each chemical ingredient that is subject to 29 C.F.R. s. 1910.1200(g)(2)<sup>5</sup>, for each well on which hydraulic fracturing treatments are performed, as provided by a service company or chemical supplier, or by the well owner or operator if the owner or operator provides such chemical ingredients. The Division may not require chemical ingredients to be identified by concentration or based on the additive in which they are found. The registry and the information provided must be accessible to the public through the Division's website.

The owner or operator of a well on which hydraulic fracturing treatment is performed must report information as required by the Division. The well owner or operator must notify the Division of any chemical ingredients not previously reported that are intentionally included and used for the purpose of creating a hydraulic fracturing treatment for the well.

A service company that performs a hydraulic fracturing treatment on a well or a supplier of an additive used in a hydraulic fracturing treatment on a well must disclose the chemical ingredients used to perform the treatment to the owner or operator of the well.

The reporting and disclosure requirements in the bill do not apply to ingredients that:

- Were not purposefully added to the hydraulic fracturing treatment.
- Occur incidentally or are otherwise unintentionally present in the treatment.
- Are not disclosed to the well owner or operator by a service company or supplier.

The bill authorizes the DEP to adopt rules to administer this section.

#### B. SECTION DIRECTORY:

**Section 1.** Creates the "Fracturing Chemical Usage Disclosure Act."

Section 2. Creates s. 377.45, F.S., directing the DEP to establish an online hydraulic fracturing chemical registry; requiring owners and operators of wells on which a hydraulic fracturing treatment is performed to disclose certain information; requiring certain service companies and suppliers to disclose certain information; authorizing the DEP to adopt rules.

**Section 3.** Provides an effective date.

# II. FISCAL ANALYSIS & ECONOMIC IMPACT STATEMENT

# A. FISCAL IMPACT ON STATE GOVERNMENT:

1. Revenues:

None.

# 2. Expenditures:

The bill appears to have an insignificant fiscal impact on DEP by requiring DEP to establish and maintain the registry described above. However, according to DEP these costs can be absorbed and additional funding is not required.

# **B. FISCAL IMPACT ON LOCAL GOVERNMENTS:**

1. Revenues:

None.

<sup>&</sup>lt;sup>5</sup> 29 C.F.R. s. 1910.1200(g)(2) provides that material safety data sheets are required for each hazardous chemical in the workplace and that the sheets be in English and contain specific information. STORAGE NAME: h0743a.ANRS

None.
DIRECT ECONOMIC IMPACT ON PRIVATE SECTOR:
The bill requires well operators to report certain information, as described above, which could result in

an indeterminate fiscal impact.

D. FISCAL COMMENTS:

2. Expenditures:

None.

C.

# **III. COMMENTS**

# A. CONSTITUTIONAL ISSUES:

1. Applicability of Municipality/County Mandates Provision:

Not applicable. The bill does not appear to require counties or municipalities to take an action requiring the expenditure of funds, reduce the authority that counties or municipalities have to raise revenue in the aggregate, nor reduce the percentage of state tax shared with counties or municipalities.

2. Other:

None.

**B. RULE-MAKING AUTHORITY:** 

The bill authorizes the DEP to adopt rules to establish an online hydraulic fracturing chemical registry.

C. DRAFTING ISSUES OR OTHER COMMENTS:

None.

IV. AMENDMENTS/ COMMITTEE SUBSTITUTE CHANGES

None.
