- Improve physical health: Reduces number of pedestrian and vehicular accidents caused by flooded roads. Improves water flow away from street. Methodology: Compare number of flooding complaints before and after the project. Compare level of flooding before and after the project using sensors.

- Enhance/preserve/improve environmental or fish and wildlife quality: Reduces oils, grease and trash pollutants from street runoff to waterways. Methodology: Compare the number of cleaning sweeps by stormwater operation crews, pre and post construction. Physically observe of water being retained in structures or swales for longer periods before running off into adjacent waterways.

- Protect the general public from harm (environmental): Decreases flooding of roadways and improves water quality of waterways. Methodology: Compare number of cleaning sweeps of waterways since less trash is expected to discharge into affected waterways, physical observation of water being retained in structures
