a. What specific purpose or goal will be achieved by the funds requested?

construction.

Total State Funds Requested (must equal total from question #6)

The goal of this project is to mitigate the impacts of seal level rise and changing weather conditions, including problems created by storm surge, and tidal inundation. The project would directly improve coastal resilience to mitigate these hazards through the construction of a new concrete seawall.

The funding will be used for a licensed general contractor to complete

b. What activities and services will be provided to meet the intended purpose of these funds?

The Florida Senate Local Funding Initiative Request Fiscal Year 2024-2025

LFIR # 1408

The proposed project is a seawall replacement at the eastern terminus of Jeffrey Street to improve coastal resilience and mitigate these demonstrated hazards. This will be done with the construction of a new concrete seawall built to a height to enable future adaptability and enhance future protection. The latest means and methodologies of modern construction techniques will be employed to successfully construct this project.

c. What direct services will be provided to citizens by the appropriation project?

The impacts of seal level rise and changing weather conditions, including problems created by storm surge, and tidal inundation, impact all of the resident of the City of Boca Raton. By replacing the existing Jeffrey Street seawall with a new, higher, concrete seawall we can enable future adaptability and enhance future protection for our residents and visitors.

d. Who is the target population served by this project? How many individuals are expected to be served?

All those who reside in the city and visit will be impacted by this project. Hardening this coastal structure is part of the City-wide program to harden all tidal seawalls and will become part of a connected, robust coastal barrier for the area, and region.

e. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?

This project will directly improve coastal resilience and mitigate these demonstrated hazards via the construction of a new concrete seawall built to a height to enable future adaptability and enhance future protection. The latest means and methodologies of modern construction techniques will be employed in order to successfully construct this project.

f. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for the contract?

Reduced levels of reimbursement may be considered if deliverables are not achieved as proposed.
