9. Is future funding likely to be requested?
a. If yes, indicate nonrecurring amount per year.
h. Describe the service of five discrete and because I will be a factor from I'm
b. Describe the source of funding that can be used in lieu of state funding.
b. Describe the source of funding that can be used in lieu of state funding.

If yes, indicate the amount of funds received and what the funds were used for.

11. Status of Construction

The Florida Senate Local Funding Initiative Request Fiscal Year 2024-2025

LFIR # 2675

The project received partial funding through the Resilient Florida Program. The program funded the project with \$5,000,000 in ARPA dollars.

Fixed Capital Construction/Majo	r Renovation:			
Construction/Renovation/Land/ Planning Engineering	The project scope is to relieve the existing constriction by replacing the existing 48-inch storm main with a 72-inch diameter storm main and outfall with backflow protection. A proposed pump station is required to meet the outfall's discharge capacity, as presented in the hydraulic grade line (HGL) analysis, lowering the risk of flooding to the entire tributary drainage area.	1,000,000		
Total State Funds Requested (must equal total from question #6)				

14. Program Performance

a. What specific purpose or goal will be achieved by the funds requested?

LFIR # 2675

A large portion of the community is vulnerable to flooding from both heavy rainfall events and high tide events. The protection of property and people from the dangerous and costly impacts of this growing threat is now a priority of the City. The project will replace an existing outfall structure and expand the capabilities of the facility to provide protection to a 210-acre drainage area that has a history of repetitive flooding and unreliable service.

b. What activities and services will be provided to meet the intended purpose of these funds?

The project scope is to relieve the existing constriction by replacing the existing 48-inch storm main with a 72-inch diameter storm main and outfall with backflow protection. A proposed pump station is required to meet the outfall's discharge capacity, as presented in the hydraulic grade line (HGL) analysis, lowering the risk of flooding to the entire tributary drainage area.

c. What direct services will be provided to citizens by the appropriation project?

The requested funds will not be used for direct services to citizens.

d. Who is the target population served by this project? How many individuals are expected to be served?

The target population is the several areas of the City of Oakland Park. The project will impact approximately 15,000 residents.

e. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?

The project provides a high-cost benefit due to the large area of the community it will protect. The 210-acre basin contains hundreds of residences, businesses, and multiple critical facilities, including a major roadway. These facilities represent hundreds of millions of dollars in property. The personal safety risk of flooding both during an event and after a major storm cannot be measured. The City will be able to measure the effectiveness of the project by monitoring surface water levels and any flooding that might occur. This will be done as part of the City's stormwater management program. The decrease in flooding events from tidal events and heavy rains will be clearly demonstrated.

f. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for the contract?

Potential penalties for not meeting deliverables or completing the project could include reduction or cancellation of funds appropriated.
