c. What direct services will be provided to citizens by the appropriation project?

Access to cleaner drinking water by eliminating the potential for lead contamination.

d. Who is the target population served by this project? How many individuals are expected to be served?

Town of Greenville residents. Currently we have 387 accounts.

e. What is the expected benefit or outcome of this project? What is the methodology by which this outcome will be measured?

Improved Water Quality: Replacing old, corroded, or leaking pipes ensures cleaner, safer drinking water. Enhanced Water Pressure: Old pipes often cause low water pressure. Replacement will restore normal pressure levels, improving water flow for households and businesses. Reduced Risk of Leaks and Breaks: Outdated pipes are more likely to crack or burst. By replacing them, you reduce the risk of costly repairs, property damage, and service disruptions caused by leaks. Cost Savings in the Long Run: While the initial cost of replacing the water lines can be significant, it can reduce ongoing maintenance costs associated with frequent repairs of old infrastructure. Over time, this results in savings. Increased System Efficiency: Newer pipes are often more energy-efficient, allowing for more effective water distribution. This can lower overall energy consumption and improve the overall functionality

f. What are the suggested penalties that the contracting agency may consider in addition to its standard penalties for failing to meet deliverables or performance measures provided for in the contract?
