DATE: March 30, 2001

**HOUSE OF REPRESENTATIVES
AS FURTHER REVISED BY THE
COUNCIL FOR READY INFRASTRUCTURE
ANALYSIS**

BILL #: CS/HB 789
RELATING TO: Copyright of Government Data Processing Software
SPONSOR(S): Committee on Information Technology & Representative Mealor

TIED BILL(S):

ORIGINATING COMMITTEE(S)/COUNCIL(S)/COMMITTEE(S) OF REFERENCE:

- (1) INFORMATION TECHNOLOGY YEAS 10 NAYS 0
- (2) FISCAL POLICY & RESOURCES YEAS 13 NAYS 0
- (3) COUNCIL FOR READY INFRASTRUCTURE YEAS 19 NAYS 0
- (4)
- (5)

I. SUMMARY:

The bill creates s. 119.084, F.S., to re-establish, revise, and supplement the provisions of s. 119.083, F.S.

The bill authorizes any agency, as defined in s. 119.011(2), F.S., to acquire, hold and enforce a copyright of agency created data processing software, to establish a price for sale and a fee for the licensing of such software, and to sell or license such software to other public or private entities. It requires that agency use of such software not diminish the right of the public to inspect and copy a non-exempt public record. It requires an agency maintaining a public record in an electronic recordkeeping system to provide to any person requesting the record a copy of such record in the medium requested if the agency maintains the record in the requested medium in exchange for payment of a fee established by the agency pursuant to s. 119.07(1)(a), F.S., or, if the agency does not maintain the record in the requested medium, to provide a copy of the record in such medium in exchange for payment of a fee established by the agency pursuant to s. 119.07(1)(b), F.S.

The bill prohibits an agency from contracting for creation or maintenance of a public records database that impairs public inspection or copying of public records. It makes the provisions of the bill subject to the Open Government Sunset Review Act of 1995 in accord with s. 119.15, F.S. It provides that such provisions shall be repealed on October 2, 2006, unless extended by legislative action taken before that date. It vests the State Technology Office with exclusive authority to adopt rules providing policies and procedures implementing the authority the act confers on state agencies.

It provides legislative findings supporting adoption of the Act.

Note: On March 27, 2001, the Committee on Fiscal Policy & Resources adopted an amendment that removes the section granting rulemaking authority to the State Technology Office.

II. SUBSTANTIVE ANALYSIS:

A. DOES THE BILL SUPPORT THE FOLLOWING PRINCIPLES:

- | | | | |
|-----------------------------------|------------------------------|-----------------------------|---|
| 1. <u>Less Government</u> | Yes <input type="checkbox"/> | No <input type="checkbox"/> | N/A <input checked="" type="checkbox"/> |
| 2. <u>Lower Taxes</u> | Yes <input type="checkbox"/> | No <input type="checkbox"/> | N/A <input checked="" type="checkbox"/> |
| 3. <u>Individual Freedom</u> | Yes <input type="checkbox"/> | No <input type="checkbox"/> | N/A <input checked="" type="checkbox"/> |
| 4. <u>Personal Responsibility</u> | Yes <input type="checkbox"/> | No <input type="checkbox"/> | N/A <input checked="" type="checkbox"/> |
| 5. <u>Family Empowerment</u> | Yes <input type="checkbox"/> | No <input type="checkbox"/> | N/A <input checked="" type="checkbox"/> |

For any principle that received a "no" above, please explain:

B. PRESENT SITUATION:

On October 1, 2000, the effect of the provisions of former s. 119.083, F.S., expired pursuant to s. 2, chapter 90-237, Laws of Florida. Thus, the provisions of former s. 119.083 are no longer effective and have not yet been otherwise replaced by any other law enacted subsequent to the enactment of s. 2, chapter 90-237, L.O.F. The Legislature allowed this section to expire during the 2000 regular legislative session when it failed to enact SB 208 (2000). The bill reestablishes and supplements the provisions of former s. 119.083, F.S.

The following language reprints much of the bill analysis for SB 208 (2000):

Section 119.083, F.S., does three things. It establishes general standards regarding agency use of technology to ensure that access to public records is not impaired. It also authorizes agencies to copyright software that they create. Finally, the section establishes fee requirements for copies.

The term *agency* is defined for the purposes of s. 119.083, F.S., to have the same meaning as provided in s. 119.011(2), F.S., except that a private agency, person, partnership, corporation, or business entity are excluded. Thus, the section under review applies to any state, county, district, authority, or municipal officer, department, division, board, bureau, commission, or other separate unit of government created or established by law including, the Commission on Ethics, the Public Service Commission, and the Office of Public Counsel.

General Standards - Section 119.083(4), F.S., places a duty on an agency to consider the type of format it is using when designing or acquiring an electronic recordkeeping system. The proliferation of computer languages and programs could pose a threat to public access if this issue is not taken into consideration by governmental entities. As a result, the Legislature has required agencies to consider whether a system is capable of providing data in a common format. The statute provides as an example of a common format the American Standard Code for Information Interchange (ASCII), but the format is not intended to be exclusive.

Additionally, s. 119.083(5), F.S., requires an agency that uses an electronic recordkeeping system to provide to any person a copy of any non-exempt public record in that system. Further, the section requires an agency to provide a copy of the record in the medium requested *if the agency maintains the record in that* medium. If the agency does not maintain the record in the requested medium, it is not prohibited from converting the record into the specified medium and can convert it at its discretion. The cost to the requestor is, however, affected by the conversion and is discussed later in this report.

Additionally, s. 119.083(6), F.S., prohibits an agency from entering into a contract for the creation or maintenance of a public records database if that contract impairs the ability of the public to inspect or copy the public records of that agency, including records that are on-line or stored in an electronic recordkeeping system used by the agency.

Finally, s. 119.083(3), F.S., takes into consideration the impact of the use of proprietary software on the right of access to public records. The term *proprietary software* is defined by s. 119.083(1)(c), F.S., to mean “data processing software that is protected by copyright or trade secret laws.” The section provides that, subject to the restrictions of copyright and trade secret laws and public records exemptions, agency use of proprietary software must not diminish the right of the public to inspect and copy a public record.

The ability to access public records is a long-standing tradition in Florida. The first state law on the subject passed in 1909. The statutory right of access was raised to a constitutional level in 1992. Article I, s. 24(a) of the State Constitution, states:

Every person has the right to inspect or copy any public record made or received in connection with the official business of any public body, officer, or employee of the state, or persons acting on their behalf, except with respect to records exempted pursuant to this section or specifically made confidential by this Constitution. This section specifically includes the legislative, executive, and judicial branches of government and each agency or department created thereunder; counties, municipalities, and districts; and each constitutional officer, board, and commission, or entity created pursuant to law or this Constitution.

The State Constitution does not explicitly contain a definition for the term *public record*, but the term was defined broadly by the Legislature in s. 119.01(1), F.S., to include:

All documents, papers, letters, maps, books, tapes, photographs, films, sound recordings, *data processing software, or other material, regardless of the physical form, characteristics, or means of transmission*, made or received pursuant to law or ordinance or in connection with the transaction of official business by any agency [*emphasis added*].

Based upon their review of the statute, the courts have also defined the term *public record*. The Florida Supreme Court held in *Shevin v. Byron, Harless, Schaffer, Reid and Assoc., Inc.*, 379 So.2d 633, 640 (Fla. 1980) that:

a public record . . . is any material prepared in connection with official agency business which is intended to perpetuate, communicate, or formalize knowledge of some type.

Additionally, it has been held that information stored in a public agency’s computer “is as much a public record as a written page in a book or a tabulation in a file stored in a filing cabinet . . .” *Siegle v. Barry*, 422 So.2d 63 (Fla. 4th DCA 1982). As a result, a public record in Florida can include not only the data that is stored in a computer, but also the agency-created data processing software that stores, retrieves, or manipulates the data.

Section 119.07(1)(a), F.S., requires a person with custody of a public record to permit it to be examined by any person at reasonable times and under reasonable circumstances. The custodian of a record must respond to a request whether it is in writing, over the telephone, or in person. A person requesting access may not be required to disclose the purpose for which he or she wants the record. Further, an agency may not require the requestor to disclose his or her name, address, or telephone number unless the custodian is specifically required by law to do so for a particular record. See, *Bevan v. Wanicka*, 505 So. 2d 1116 (Fla. 2d DCA 1987).

Article I, s. 24(c) of the State Constitution, and the Public Records Law authorize the Legislature to create exemptions to public records requirements pursuant to specified limitations. An exemption that is relative to this report is found in s. 119.07(3)(o), F.S. That section provides that data processing software obtained by an agency under a licensing agreement which prohibits its disclosure and which is a trade secret, and agency-produced data processing software which is sensitive, are exempt. The term *sensitive* is defined to mean only those portions of data processing

software, including the specifications and documentation, used to: (a) collect, process, store, and retrieve information which is exempt; (b) collect, process, store, and retrieve financial management information of the agency, such as payroll and accounting records; or (c) control and direct access authorizations and security measures for automated systems.

A general statement regarding Florida's policy on electronic records is found in s. 119.01, F.S. While subsection (2) encourages agencies to provide access to public records by remote electronic means to the extent feasible, subsection (3) states:

The Legislature finds that providing access to public records is a duty of each agency and that automation of public records must not erode the right of access to those records. As each agency increases its use of and dependence on electronic recordkeeping, each agency must ensure reasonable access to records electronically maintained.

In addition to the foregoing standards, the Legislature has confronted a number of issues related to the impact of technology on public records in s. 119.083, F.S. The section contains general standards to ensure reasonable access to electronic records, as well as provides authorization to agencies to copyright software that they create.

Copyright of Agency-Created Software - Section 119.083 (2), F.S., provides:

Any agency is authorized to hold copyrights for data processing software created by the agency and to enforce its rights pertaining to such copyrights, provided that the agency complies with the requirements of this section.

The term *data processing software* is defined to have the same meaning found in s. 282.303, F.S., which is:

the programs and routines used to employ and control the capabilities of data processing hardware, including, but not limited to, operating systems, compilers, assemblers, utilities, library routines, maintenance routines, applications, and computer networking programs.

Once an agency obtains a copyright for its data processing software, s. 119.083(2)(a), F.S., authorizes it to sell or license it to any other public or private entity based upon market considerations.

Section 119.083(2)(b), F.S., states that the provisions of the subsection are *supplemental* to other statutes that extend copyright authority to an agency. The subsection does not supplant or repeal any of the other numerous copyright provisions in the *Florida Statutes*. The Federal Copyright Act of 1976, 17 U.S.C. s. 102(a), protects:

original works of authorship fixed in any tangible medium of expression, now known or later developed, from which they can be perceived, reproduced, or otherwise communicated, either directly or with the aid of a machine or device.

While works created by an officer or employee of the United States Government as a part of his or her duties are in the public domain and may not be copyrighted under 17 U.S.C., s. 5, there is no corresponding federal prohibition on copyrighting most works of other governmental entities. As a result, state and local governments are not constrained from copyrighting works created by public employees as part of their official duties. The U.S. Copyright Office, nevertheless, states in *The Compendium of Copyright Office Practices* that legislative enactments, judicial opinions and administrative rulings, whether federal or state, are ineligible for federal copyright protection for public policy reasons.

Authorization to copyright agency-created software has been assailed for numerous public policy reasons. One argument against copyright of works by state and local governments is that works of state and local governmental employees, like those of their federal counterparts, should be

considered to be in the public domain. The term *public domain* has been defined as a “true commons comprising elements of intellectual property that are ineligible for private ownership.”¹ Under copyright law, works that are in the public domain are not copyrightable and may be freely used by any member of the public.

Those who oppose copyrighting agency-created data processing software argue that public records are by their very nature in the public domain and that public policy should preclude copyright protection for public records, which agency-created software is defined to be. Further, it is argued that provisions in s. 119.083, F.S., conflict with standards that apply to all other public records. For example, it is not permissible to inquire for what purpose a person wants a public record, yet such an inquiry must be made to determine if a person is going to use agency-created software to view public records or use the software for some other purpose. The cost of the copy is determined by this inquiry. Cost for the copy is also different than other public records as a “market based” price is authorized to be charged if the agency-created software is not going to be used to view other public records.

Another argument raised by opponents of copyright by governmental entities relates to the purpose of copyright. Copyright law attempts to balance the rewards provided to the creator with the benefits provided to society at large. As noted in a 1993 report by the Joint Committee on Information Technology Resources entitled *Agency-Created Data Processing Software as a Public Record*:

Focusing on the right of the individual to reap the reward of his endeavors, copyright law seeks to protect an author’s economic incentive to create by granting a monopoly limited in both time and scope, yet sufficient to ensure . . . adequate opportunity to realize an economic return, thereby encouraging production of new and innovative work. However, [a] competing concern is the recognition that free and unrestrained access to the works of others encourages a greater dispersion of knowledge . . . and greatly enhances the public welfare.

If the incentive of personal reward is one of the fundamental purposes of copyright, it has been argued that this incentive should be inapplicable to governmental entities because their primary purpose is to promote the general welfare, independent of any need for economic benefit. Further mitigating against government copyright is the lack of need for compensation for government works because tax-supported salaries both induce and compensate government employees for their efforts. Opponents also opine that governmental entities should only produce software that is necessary for the agency to perform its public duties regardless of the potential for profit.

Proponents of extending copyright to works of governmental entities, however, argue that permitting agencies to copyright and sell their software at market costs permits them to recoup development costs and generate revenue. It is argued that additional sources of agency income not only benefit the public by lowering the cost the public must pay to support the agency, but result in the creation of improved computer systems and data compilations.

According to Interim Project Report 2000-79 by the staff of the Committee on Governmental Oversight and Productivity, survey responses showed that most agencies do not copyright or sell their software. Though almost 60 percent of the agencies that responded to the survey have at some time produced their own software, only a small percent (13 percent) indicated that they had ever bothered to copyright their product. Agencies indicated that they held about 120 copyrights, with the majority being held by counties (41) and universities (41). Significantly, less than one-half of 1 percent of respondents (.050) indicated that they had sold agency-created software for more than the cost of duplication. Nevertheless, survey responses show that a few agencies received income from sales based upon market-based prices. Specifically, departments reported sales totaling \$107,000; cities reported sales totaling \$1,500; counties reported sales totaling \$683,000. By far the largest amount reported was by universities, who reported sales of \$11,037,025.75. The amounts reported, however, often span a period covering ten or more years. Further, it should be noted that universities have authority to copyright under another provision of statute.

¹Litman, *The Public Domain*, 39 Emory L.J. 965 at 974 (No. 4 Fall 1990).

Florida has historically authorized the copyright of governmental works. Some examples of state statutory copyright authorization include:

- Permitting the Department of Citrus to hold legal title and interest to patents, trademarks, copyrights, certification marks in s. 601.101, F.S.;
- Authorizing universities to secure copyrights, letters of patent, and trademarks on their works and to enforce their rights in s. 240.229, F.S.;
- Authorizing the community college board of trustees to copyright work products which relate to educational endeavors in s. 240.319(3)(j), F.S.;
- Permitting the Department of the Lottery to hold copyrights, trademarks, and service marks and enforce its rights in s. 24.105, F.S.;
- Authorizing the Spaceport Florida Authority to hold copyrights and patents in s. 331.355, F.S.;
- Permitting the Department of State to secure letters of patent, copyrights, and trademarks and to enforce its rights in them in s. 286.031, F.S.; and
- Authorizing the Department of Transportation to secure letters of patent, copyrights, and trademarks on any legitimately acquired work products, and to enforce its rights therein in s. 334.049, F.S.

Florida also has a general provision regarding ownership of copyrights by the state. Section 286.021, F.S., provides that the:

legal title and every right, interest, claim or demand of any kind in and to any patent, trademark or copyright, or application for the same, now owned or held, or as may hereafter be acquired, owned and *held by the state, or any of its boards, commissions or agencies*, is hereby granted to and vested in the Department of State for the use and benefit of the state; and no person, firm or corporation shall be entitled to use the same without the written consent of said Department of State [*emphasis added*].

A list obtained from the Florida Department of State shows that copyrights and patents have been obtained by state agencies in Florida at least since 1949. A few examples on the list include: (a) Patent No. 777,416 for Improvement in Direction Finder Equipment by the Board of Institutions in 1949; (b) copyright by the Florida State University on "Proceedings of the International Conference on the Nuclear Optical Model" in 1959; and (c) 1985 copyright on Department of Transportation maps of northern Florida counties.

Furthermore, Florida is not unique among the states in authorizing the copyright of agency-created software. The State of Minnesota authorizes state agencies, statewide systems, and political subdivisions to obtain copyrights or patents on computer software programs or components of a program created by that governmental entity. This authorization is contained in a chapter of law entitled *Government Data Practices* which defines all government data collected, created, received, maintained or disseminated by a state agency, political subdivision, or statewide system to be public unless classified by statute or federal law as nonpublic or protected nonpublic.

At least four other states, Alaska, Utah, Texas, and California were identified as states that authorize certain governmental entities to obtain copyrights on the software they create or have developed by a private contractor. The State of California also regulates agency-created software in a chapter of law dealing with public records. California, contrary to Florida, specifically *excludes* computer software developed by a state or local agency from the definition of *public record* and authorizes agencies to sell, lease, or license the software for commercial or noncommercial use, pursuant to s. 6254.9 *Cal. Gov. Code*. Computer software in California includes computer mapping systems, computer programs, and computer graphics systems. California law also provides, however, that:

Nothing in this section is intended to affect the public record status of information merely because it is stored in a computer. Public records stored in a computer shall be disclosed as required by this chapter.

Thus, Florida is not unique in permitting copyright of government works in general or of agency-created software in particular.

Fee Structures - The Legislature has also established two fee structures in s. 119.083, F.S. First, it established fees for the sale or licensing of agency-created data processing software that has been copyrighted. When an agency offers its copyrighted software for sale, s. 119.083(2)(a), F.S., authorizes the agency to set the price based on market considerations. The market-based price that is established, however, is subject to one considerable caveat. When an individual or entity needs the software *solely* for application to data or information maintained or generated by the agency that created it, the fee is determined by general public records law requirements in s. 119.07(1), F.S. That section provides that if a specific fee is prescribed by law, such as \$1 per page, then the custodian of the record is required to furnish the copy of the record upon payment of the prescribed fee. If a fee is not prescribed by law, an agency may not charge more than 15 cents per one-sided copy for pages that are not more than 14 inches by 8 2 inches. For all other copies, an agency may charge for the actual cost of duplication.

Section 119.07(1)(a), F.S., defines the term *actual cost of duplication* to mean:

the cost of the material and supplies used to duplicate the record, but it does not include the labor cost or overhead cost associated with such duplication. If copies of county maps or aerial photographs are supplied, then a reasonable charge for labor and overhead associated with duplication may be assessed.

A special service charge, in addition to the actual cost of duplication, may be assessed if the nature or volume of public records requested requires extensive use of information technology resources or extensive clerical or supervisory assistance by agency personnel. The term *information technology resources* is defined to mean:

data processing hardware and software and services, communications, supplies, personnel, facility resources, maintenance, and training.

The special service charge that is authorized must be reasonable and must be based on the cost incurred for the extensive use of information technology resources, the labor cost of the personnel providing the service that is actually incurred, or both.

Proceeds from the sale or licensing of copyrighted data processing software are required to be deposited by an agency into an agency trust fund. Counties, municipalities, and other political subdivisions are authorized to designate how such sale and licensing proceeds are to be used.

The second fee structure that is established in s. 119.083, F.S., is contained in subsection (5). The subsection requires an agency to provide a copy of the electronically stored record in the medium requested if the agency maintains the record in that medium. In these cases, the fee to be charged is the standard fee established by chapter 119, F.S. If the agency elects to provide a copy of a public record in a medium not routinely used by the agency, or if it elects to compile information not routinely developed or maintained by the agency or that requires a substantial amount of manipulation or programming, the fee must comply with s. 119.07(1)(b), F.S., which is the section relating to extensive use of information technology resources or extensive clerical or supervisory assistance discussed above.

C. EFFECT OF PROPOSED CHANGES:

The bill creates s. 119.084 to re-establish the provisions of s. 119.083 in their entirety.

It amends the former provisions of s. 119.083 to provide authority for agencies to “acquire” a copyright to agency created data processing software, to establish a sale price for a copyright of such software; and to vest exclusive authority in the State Technology Office to adopt rules providing policies and procedures implementing the authority the act confers on state agencies, and

to provide for s. 119.084 to be repealed on October 2, 2006, if not continued in effect by subsequent legislative action taken before that date.

It provides a statement of legislative findings supporting the re-establishment of the provisions of s. 119.083, F.S.

D. SECTION-BY-SECTION ANALYSIS:

Section 1 creates s. 119.084, F.S., to re-establish the provisions of former s. 119.083, F.S., to revise the former provisions of s. 119.083 to provide authority for agencies to "acquire" a copyright of agency created data processing software, to provide authority for agencies to establish a price for the sale of such copyright, and to subject s. 119.084 to repeal on October 2, 2006, unless continued in effect by subsequent legislative action taken before that date.

Section 2 provides legislative findings supporting adoption of s. 119.084, F.S., to re-establish the provisions of former s. 119.083, F.S.

Section 3 vests the State Technology Office with exclusive authority to adopt rules providing policies and procedures implementing the authority the act confers on state agencies.

Section 4 provides an effective date.

III. FISCAL ANALYSIS & ECONOMIC IMPACT STATEMENT:

A. FISCAL IMPACT ON STATE GOVERNMENT:

1. Revenues:

Enactment of the bill should result in continuing the receipt of revenues that were received under former s. 119.083, F.S., from agencies holding and enforcing the copyright of data processing software and from selling or licensing such copyright.

According to Interim Project Report 2000-79 by the staff of the Senate Committee on Governmental Oversight and Productivity, survey responses showed that most agencies do not copyright or sell their software. Though almost 60 percent of the agencies that responded to the survey have at some time produced their own software, only a small percent (13 percent) indicated that they had ever bothered to copyright their product. Agencies indicated that they held about 120 copyrights, with the majority being held by counties (41) and universities (41). Significantly, less than one-half of 1 percent of respondents (.050) indicated that they had sold agency-created software for more than the cost of duplication. Nevertheless, survey responses show that a few agencies received income from sales based upon market-based prices. Specifically, departments reported sales totaling \$107,000; cities reported sales totaling \$1,500; counties reported sales totaling \$683,000. By far the largest amount reported was by universities, who reported sales of \$11,037,025.75. The amounts reported, however, often span a period covering ten or more years. Further, it should be noted that universities have authority to copyright under another provision of statute.

2. Expenditures:

None.

B. FISCAL IMPACT ON LOCAL GOVERNMENTS:

1. Revenues:

None.

2. Expenditures:

None.

C. DIRECT ECONOMIC IMPACT ON PRIVATE SECTOR:

Enactment of the bill continues to prevent the private sector from obtaining and using any data processing software created by an agency to which the agency acquired and held a copyright without purchasing the agency's copyright to the software or entering into a licensing agreement with the agency authorizing use of the software.

Re-creating this section ensures that use of technology by state agencies will not negatively affect access to public records.

The survey results reported in Interim Project 2000-79 by staff of the Committee on Governmental Oversight and Productivity showed that most agencies do not copyright or sell their software. As a result, re-enactment of authority to copyright should not negatively impact software companies.

D. FISCAL COMMENTS:

There is not yet available any estimate of economic impact of CS/HB 789.

IV. CONSEQUENCES OF ARTICLE VII, SECTION 18 OF THE FLORIDA CONSTITUTION:

A. APPLICABILITY OF THE MANDATES PROVISION:

This bill does not require counties or municipalities to spend funds or to take an action requiring the expenditure of funds.

B. REDUCTION OF REVENUE RAISING AUTHORITY:

This bill does not reduce the authority that municipalities or counties have to raise revenues in the aggregate.

C. REDUCTION OF STATE TAX SHARED WITH COUNTIES AND MUNICIPALITIES:

This bill does not reduce the percentage of a state tax shared with counties or municipalities.

V. COMMENTS:

A. CONSTITUTIONAL ISSUES:

None.

B. RULE-MAKING AUTHORITY:

The bill authorizes the State Technology Office to adopt rules implementing the authority the bill delegates in respect of acquiring, holding and enforcing a copyright to state agency created data processing software, and to selling and licensing such a copyright. (On March 27, 2001, the Committee on Fiscal Policy & Resources adopted an amendment that removes the section granting rulemaking authority to the State Technology Office.)

C. OTHER COMMENTS:

Article I, s. 23 of the State Constitution provides that every person has the right to inspect and copy a public record. The bill re-enacts standards that ensure that use of technology by agencies does not limit access to public records.

Senate Interim Project Report 2000-79 by the Governmental Oversight and Productivity Committee recommended that the four general standards that help ensure access to electronic public records that were contained in s. 119.083, F.S., be continued. Further, the report recommended that subsection (2), which authorized agencies to copyright software that they create, be continued. Given the evolutionary nature of computer technology and its potential impact on public records, however, the report recommended that subsection (2) be subject to repeal in five years unless reviewed and reauthorized by the Legislature. Finally, the report recommended that the fee structure be continued.

A similar project report by the House Committee on Governmental Operations in 1999 also recommended that the Legislature re-enact s. 119.083, F.S., to allow copyright protection of governmental software. This option maintains the status quo. While authorization for agencies to copyright their software results in some anomalies, the Legislature has provided numerous methods to ensure such authorization does not limit access to public records. In addition to requiring agencies: (a) to consider the type of format they use when designing or acquiring an electronic recordkeeping system; (b) to provide copies of electronically-stored records; (c) to refrain from entering into contracts that impair the ability of the public to inspect or copy public records; and (d) to abstain from using proprietary software that would diminish the right of the public to inspect and copy a public record, the Legislature has also restricted the fees that may be charged for agency-created and copyrighted software when that software is required to access public records. And while few agencies seek copyright protection for their software, and fewer still seek market-based prices when selling their software, the option should remain available for those agencies that can develop a valuable software product.

VI. AMENDMENTS OR COMMITTEE SUBSTITUTE CHANGES:

On March 27, 2001, the Committee on Fiscal Policy & Resources adopted an amendment that removes the section granting rulemaking authority to the State Technology Office.
