A bill to be entitled
An act relating to water quality improvements; providing a short title; requiring the Department of Health to provide a specified report to the Governor and the Legislature by a specified date; requiring the Department of Health and the Department of Environmental Protection to submit to the Governor and the Legislature, by a specified date, certain recommendations relating to the transfer of the Onsite Sewage Program; requiring the departments to enter into an interagency agreement that meets certain requirements by a specified date; transferring the Onsite Sewage Program within the Department of Health to the Department of Environmental Protection by a type two transfer by a specified date; providing that certain employees retain and transfer certain types of leave upon the transfer; amending s. 373.4131, F.S.; requiring the Department of Environmental Protection to include stormwater structural controls inspections as part of its regular staff training; requiring the department and the water management districts to adopt rules regarding stormwater design and operation by a specified date; amending s. 381.0065, F.S.; conforming provisions to changes made by the act; requiring the department to adopt rules for the location of onsite sewage treatment and disposal systems and complete...
such rulemaking by a specified date; requiring the department to evaluate certain data relating to the self-certification program and provide the Legislature with recommendations by a specified date; providing that certain provisions relating to existing setback requirements are applicable to permits only until the adoption of certain rules by the department; creating s. 381.00652, F.S.; creating an onsite sewage treatment and disposal systems technical advisory committee within the department; providing the duties and membership of the committee; requiring the committee to submit a report to the Governor and the Legislature by a specified date; providing for the expiration of the committee; repealing s. 381.0068, F.S., relating to a technical review and advisory panel; amending s. 403.061, F.S.; requiring the department to adopt rules relating to the underground pipes of wastewater collection systems; requiring public utilities or their affiliated companies that hold or are seeking a wastewater discharge permit to file certain reports and data with the department; creating s. 403.0616, F.S.; requiring the department, subject to legislative appropriation, to establish a real-time water quality monitoring program; encouraging the formation of public-private partnerships; amending s. 403.067, F.S.; requiring basin management action plans for nutrient total maximum daily loads to include wastewater treatment and onsite sewage treatment and disposal system
remediation plans that meet certain requirements;
requiring the Department of Agriculture and Consumer
Services to collect fertilization and nutrient records
from certain agricultural producers and provide the
information to the department annually by a specified
date; requiring the Department of Agriculture and
Consumer Services to perform onsite inspections of the
agricultural producers at specified intervals;
authorizing certain entities to develop research plans
and legislative budget requests relating to best
management practices by a specified date; creating s.
403.0673, F.S.; establishing a wastewater grant
program within the Department of Environmental
Protection; authorizing the department to distribute
appropriated funds for certain projects; providing
requirements for the distribution; requiring the
department to coordinate with each water management
district to identify grant recipients; requiring an
annual report to the Governor and the Legislature by a
specified date; creating s. 403.0855, F.S.; providing
legislative findings regarding the regulation of
biosolids management in this state; requiring the
department to adopt rules for biosolids management;
exempting the rules from a specified statutory
requirement; amending s. 403.086, F.S.; prohibiting
facilities for sanitary sewage disposal from disposing
of any waste in the Indian River Lagoon beginning on a
specified date without first providing advanced waste
treatment; requiring facilities for sanitary sewage
disposal to have a power outage contingency plan;
requiring the facilities to take steps to prevent
overflows and leaks and ensure that the water reaches
the appropriate facility for treatment; requiring the
facilities to provide the Department of Environmental
Protection with certain information; requiring the
department to adopt rules; amending s. 403.087, F.S.;
requiring the department to issue operation permits
for domestic wastewater treatment facilities to
certain facilities under certain circumstances;
amending s. 403.088, F.S.; revising the permit
conditions for a water pollution operation permit;
requiring the department to submit a report to the
Governor and the Legislature by a specified date
identifying all wastewater utilities that experienced
sanitary sewer overflows within a specified timeframe;
amending s. 403.0891, F.S.; requiring model stormwater
management programs to contain model ordinances for
nutrient reduction practices and green infrastructure;
amending s. 403.121, F.S.; increasing and providing
administrative penalties; amending s. 403.1835, F.S.;
conforming a cross-reference; requiring the department
to give priority for water pollution control financial
assistance to projects that implement certain
provisions and that promote efficiency; amending s.
403.1838, F.S.; revising requirements for the
prioritization of grant applications within the Small
Community Sewer Construction Assistance Act; providing
a declaration of important state interest; amending
WHEREAS, nutrients negatively impact groundwater and surface waters in this state and cause the proliferation of algal blooms, and

WHEREAS, onsite sewage treatment and disposal systems were designed to manage human waste and are permitted by the Department of Health for that purpose, and

WHEREAS, conventional onsite sewage treatment and disposal systems contribute nutrients to groundwater and surface waters across this state which can cause harmful blue-green algal blooms, and

WHEREAS, many stormwater systems are designed primarily to divert and control stormwater rather than to remove pollutants, and

WHEREAS, most existing stormwater system design criteria fail to consistently meet either the 80 percent or 95 percent target pollutant reduction goals established by the Department of Environmental Protection, and

WHEREAS, other significant pollutants often can be removed
from stormwater more easily than nutrients and, as a result, design criteria that provide the desired removal efficiencies for nutrients will likely achieve equal or better removal efficiencies for other constituents, and

WHEREAS, the Department of Environmental Protection has found that the major causes of sanitary sewer overflows during storm events are infiltration, inflow, and acute power failures, and

WHEREAS, the Department of Environmental Protection lacks statutory authority to regulate infiltration and inflow or to require that all lift stations constructed prior to 2003 have emergency backup power, and

WHEREAS, sanitary sewer overflows and leaking infrastructure create both a human health concern and a nutrient pollution problem, and

WHEREAS, the agricultural sector is a significant contributor to the excess delivery of nutrients to surface waters throughout this state and has been identified as the dominant source of both phosphorus and nitrogen within the Lake Okeechobee watershed and a number of other basin management action plan areas, and

WHEREAS, only 75 percent of eligible agricultural parties within the Lake Okeechobee Basin Management Action Plan area are enrolled in an appropriate best management practice and enrollment numbers are considerably less in other basin management action plan areas, and

WHEREAS, although agricultural best management practices, by design, should be technically feasible and economically viable, that does not imply that their adoption and full
implementation, alone, will alleviate downstream water quality impairments, NOW, THEREFORE,

Be It Enacted by the Legislature of the State of Florida:

Section 1. This act may be cited as the “Clean Waterways Act.”

Section 2. (1) By July 1, 2020, the Department of Health must provide a report to the Governor, the President of the Senate, and the Speaker of the House of Representatives detailing the following information regarding the Onsite Sewage Program:

(a) The average number of permits issued each year;
(b) The number of department employees conducting work on or related to the program each year; and
(c) The program’s costs and expenditures, including, but not limited to, salaries and benefits, equipment costs, and contracting costs.

(2) By December 31, 2020, the Department of Health and the Department of Environmental Protection shall submit recommendations to the Governor, the President of the Senate, and the Speaker of the House of Representatives regarding the transfer of the Onsite Sewage Program from the Department of Health to the Department of Environmental Protection. The recommendations must address all aspects of the transfer, including the continued role of the county health departments in the permitting, inspection, data management, and tracking of onsite sewage treatment and disposal systems under the direction of the Department of Environmental Protection.
(3) By June 30, 2021, the Department of Health and the Department of Environmental Protection shall enter into an interagency agreement based on the Department of Health report required under subsection (2) and on recommendations from a plan that must address all agency cooperation for a period not less than 5 years after the transfer, including:

(a) The continued role of the county health departments in the permitting, inspection, data management, and tracking of onsite sewage treatment and disposal systems under the direction of the Department of Environmental Protection.

(b) The appropriate proportionate number of administrative, auditing, inspector general, attorney, and operational support positions, and their related funding levels and sources and assigned property, to be transferred from the Office of General Counsel, the Office of Inspector General, and the Division of Administrative Services or other relevant offices or divisions within the Department of Health to the Department of Environmental Protection.

(c) The development of a recommended plan to address the transfer or shared use of buildings, regional offices, and other facilities used or owned by the Department of Health.

(d) Any operating budget adjustments that are necessary to implement the requirements of this act. Adjustments made to the operating budgets of the agencies in the implementation of this act must be made in consultation with the appropriate substantive and fiscal committees of the Senate and the House of Representatives. The revisions to the approved operating budgets for the 2021-2022 fiscal year which are necessary to reflect the organizational changes made by this act must be implemented
pursuant to s. 216.292(4)(d), Florida Statutes, and are subject to s. 216.177, Florida Statutes. Subsequent adjustments between the Department of Health and the Department of Environmental Protection which are determined necessary by the respective agencies and approved by the Executive Office of the Governor are authorized and subject to s. 216.177, Florida Statutes. The appropriate substantive committees of the Senate and the House of Representatives must also be notified of the proposed revisions to ensure their consistency with legislative policy and intent.

(4) Effective July 1, 2021, all powers, duties, functions, records, offices, personnel, associated administrative support positions, property, pending issues, existing contracts, administrative authority, administrative rules, and unexpended balances of appropriations, allocations, and other funds for the regulation of onsite sewage treatment and disposal systems relating to the Onsite Sewage Program in the Department of Health are transferred by a type two transfer, as defined in s. 20.06(2), Florida Statutes, to the Department of Environmental Protection.

(5) Notwithstanding chapter 60L-34, Florida Administrative Code, or any law to the contrary, employees who are transferred from the Department of Health to the Department of Environmental Protection to fill positions transferred by this act retain and transfer any accrued annual leave, sick leave, and regular and special compensatory leave balances.

Section 3. Subsection (5) of section 373.4131, Florida Statutes, is amended, and subsection (6) is added to that section, to read:
576-02463-20

373.4131 Statewide environmental resource permitting rules.—

(5) To ensure consistent implementation and interpretation of the rules adopted pursuant to this section, the department shall conduct or oversee regular assessment and training of its staff and the staffs of the water management districts and local governments delegated local pollution control program authority under s. 373.441. The training must include coordinating field inspections of publicly and privately owned stormwater structural controls, such as stormwater retention or detention ponds.

(6) By January 1, 2021:

(a) The department and the water management districts shall initiate rulemaking to update the stormwater design and operation regulations using the most recent scientific information available; and

(b) The department shall evaluate inspection data relating to compliance by those entities that self-certify under s. 403.814(12) and provide the Legislature with recommendations for improvements to the self-certification program.

Section 4. Effective July 1, 2021, present paragraphs (d) through (q) of subsection (2) of section 381.0065, Florida Statutes, are redesignated as paragraphs (e) through (r), respectively, a new paragraph (d) is added to that subsection, and subsections (3) and (4) of that section are amended, to read:

381.0065 Onsite sewage treatment and disposal systems;

(2) DEFINITIONS.—As used in ss. 381.0065-381.0067, the
(d) “Department” means the Department of Environmental Protection.

(3) DUTIES AND POWERS OF THE DEPARTMENT OF HEALTH.—The department shall:

(a) Adopt rules to administer ss. 381.0065-381.0067, including definitions that are consistent with the definitions in this section, decreases to setback requirements where no health hazard exists, increases for the lot-flow allowance for performance-based systems, requirements for separation from water table elevation during the wettest season, requirements for the design and construction of any component part of an onsite sewage treatment and disposal system, application and permit requirements for persons who maintain an onsite sewage treatment and disposal system, requirements for maintenance and service agreements for aerobic treatment units and performance-based treatment systems, and recommended standards, including disclosure requirements, for voluntary system inspections to be performed by individuals who are authorized by law to perform such inspections and who shall inform a person having ownership, control, or use of an onsite sewage treatment and disposal system of the inspection standards and of that person’s authority to request an inspection based on all or part of the standards.

(b) Perform application reviews and site evaluations, issue permits, and conduct inspections and complaint investigations associated with the construction, installation, maintenance, modification, abandonment, operation, use, or repair of an onsite sewage treatment and disposal system for a residence or
establishment with an estimated domestic sewage flow of 10,000 gallons or less per day, or an estimated commercial sewage flow of 5,000 gallons or less per day, which is not currently regulated under chapter 403.

(c) Develop a comprehensive program to ensure that onsite sewage treatment and disposal systems regulated by the department are sized, designed, constructed, installed, sited, repaired, modified, abandoned, used, operated, and maintained in compliance with this section and rules adopted under this section to prevent groundwater contamination, including impacts from nutrient pollution, and surface water contamination and to preserve the public health. The department is the final administrative interpretive authority regarding rule interpretation. In the event of a conflict regarding rule interpretation, the secretary of the department State Surgeon General, or his or her designee, shall timely assign a staff person to resolve the dispute.

(d) Grant variances in hardship cases under the conditions prescribed in this section and rules adopted under this section.

(e) Permit the use of a limited number of innovative systems for a specific period of time, when there is compelling evidence that the system will function properly and reliably to meet the requirements of this section and rules adopted under this section.

(f) Issue annual operating permits under this section.

(g) Establish and collect fees as established under s. 381.0066 for services provided with respect to onsite sewage treatment and disposal systems.

(h) Conduct enforcement activities, including imposing
fines, issuing citations, suspensions, revocations, injunctions, and emergency orders for violations of this section, part I of chapter 386, or part III of chapter 489 or for a violation of any rule adopted under this section, part I of chapter 386, or part III of chapter 489.

(i) Provide or conduct education and training of department personnel, service providers, and the public regarding onsite sewage treatment and disposal systems.

(j) Supervise research on, demonstration of, and training on the performance, environmental impact, and public health impact of onsite sewage treatment and disposal systems within this state. Research fees collected under s. 381.0066(2)(k) must be used to develop and fund hands-on training centers designed to provide practical information about onsite sewage treatment and disposal systems to septic tank contractors, master septic tank contractors, contractors, inspectors, engineers, and the public and must also be used to fund research projects which focus on improvements of onsite sewage treatment and disposal systems, including use of performance-based standards and reduction of environmental impact. Research projects shall be initially approved by the technical review and advisory panel and shall be applicable to and reflect the soil conditions specific to Florida. Such projects shall be awarded through competitive negotiation, using the procedures provided in s. 287.055, to public or private entities that have experience in onsite sewage treatment and disposal systems in Florida and that are principally located in Florida. Research projects may not be awarded to firms or entities that employ or are associated with persons who serve on either the technical review
and advisory panel or the research review and advisory committee.

(k) Approve the installation of individual graywater disposal systems in which blackwater is treated by a central sewerage system.

(l) Regulate and permit the sanitation, handling, treatment, storage, reuse, and disposal of byproducts from any system regulated under this chapter and not regulated by the Department of Environmental Protection.

(m) Permit and inspect portable or temporary toilet services and holding tanks. The department shall review applications, perform site evaluations, and issue permits for the temporary use of holding tanks, privies, portable toilet services, or any other toilet facility that is intended for use on a permanent or nonpermanent basis, including facilities placed on construction sites when workers are present. The department may specify standards for the construction, maintenance, use, and operation of any such facility for temporary use.

(n) Regulate and permit maintenance entities for performance-based treatment systems and aerobic treatment unit systems. To ensure systems are maintained and operated according to manufacturer’s specifications and designs, the department shall establish by rule minimum qualifying criteria for maintenance entities. The criteria shall include: training, access to approved spare parts and components, access to manufacturer’s maintenance and operation manuals, and service response time. The maintenance entity shall employ a contractor licensed under s. 489.105(3)(m), or part III of chapter 489, or...
a state-licensed wastewater plant operator, who is responsible for maintenance and repair of all systems under contract.

(4) PERMITS; INSTALLATION; AND CONDITIONS.—A person may not construct, repair, modify, abandon, or operate an onsite sewage treatment and disposal system without first obtaining a permit approved by the department. The department may issue permits to carry out this section, but shall not make the issuance of such permits contingent upon prior approval by the Department of Environmental Protection, except that The issuance of a permit for work seaward of the coastal construction control line established under s. 161.053 shall be contingent upon receipt of any required coastal construction control line permit from the department of Environmental Protection. A construction permit is valid for 18 months from the issuance date and may be extended by the department for one 90-day period under rules adopted by the department. A repair permit is valid for 90 days from the date of issuance. An operating permit must be obtained before prior to the use of any aerobic treatment unit or if the establishment generates commercial waste. Buildings or establishments that use an aerobic treatment unit or generate commercial waste shall be inspected by the department at least annually to assure compliance with the terms of the operating permit. The operating permit for a commercial wastewater system is valid for 1 year from the date of issuance and must be renewed annually. The operating permit for an aerobic treatment unit is valid for 2 years from the date of issuance and must be renewed every 2 years. If all information pertaining to the siting, location, and installation conditions or repair of an onsite sewage treatment and disposal system remains the same, a
construction or repair permit for the onsite sewage treatment and disposal system may be transferred to another person, if the transferee files, within 60 days after the transfer of ownership, an amended application providing all corrected information and proof of ownership of the property. There is no fee associated with the processing of this supplemental information. A person may not contract to construct, modify, alter, repair, service, abandon, or maintain any portion of an onsite sewage treatment and disposal system without being registered under part III of chapter 489. A property owner who personally performs construction, maintenance, or repairs to a system serving his or her own owner-occupied single-family residence is exempt from registration requirements for performing such construction, maintenance, or repairs on that residence, but is subject to all permitting requirements. A municipality or political subdivision of the state may not issue a building or plumbing permit for any building that requires the use of an onsite sewage treatment and disposal system unless the owner or builder has received a construction permit for such system from the department. A building or structure may not be occupied and a municipality, political subdivision, or any state or federal agency may not authorize occupancy until the department approves the final installation of the onsite sewage treatment and disposal system. A municipality or political subdivision of the state may not approve any change in occupancy or tenancy of a building that uses an onsite sewage treatment and disposal system until the department has reviewed the use of the system with the proposed change, approved the change, and amended the operating permit.
(a) Subdivisions and lots in which each lot has a minimum area of at least one-half acre and either a minimum dimension of 100 feet or a mean of at least 100 feet of the side bordering the street and the distance formed by a line parallel to the side bordering the street drawn between the two most distant points of the remainder of the lot may be developed with a water system regulated under s. 381.0062 and onsite sewage treatment and disposal systems, provided the projected daily sewage flow does not exceed an average of 1,500 gallons per acre per day, and provided satisfactory drinking water can be obtained and all distance and setback, soil condition, water table elevation, and other related requirements of this section and rules adopted under this section can be met.

(b) Subdivisions and lots using a public water system as defined in s. 403.852 may use onsite sewage treatment and disposal systems, provided there are no more than four lots per acre, provided the projected daily sewage flow does not exceed an average of 2,500 gallons per acre per day, and provided that all distance and setback, soil condition, water table elevation, and other related requirements that are generally applicable to the use of onsite sewage treatment and disposal systems are met.

(c) Notwithstanding paragraphs (a) and (b), for subdivisions platted of record on or before October 1, 1991, when a developer or other appropriate entity has previously made or makes provisions, including financial assurances or other commitments, acceptable to the Department of Health, that a central water system will be installed by a regulated public utility based on a density formula, private potable wells may be used with onsite sewage treatment and disposal systems until the
agreed-upon densities are reached. In a subdivision regulated by 
this paragraph, the average daily sewage flow may not exceed 
2,500 gallons per acre per day. This section does not affect the 
validity of existing prior agreements. After October 1, 1991, 
the exception provided under this paragraph is not available to 
a developer or other appropriate entity.

(d) Paragraphs (a) and (b) do not apply to any proposed 
residential subdivision with more than 50 lots or to any 
proposed commercial subdivision with more than 5 lots where a 
publicly owned or investor-owned sewerage system is available. 
It is the intent of this paragraph not to allow development of 
additional proposed subdivisions in order to evade the 
requirements of this paragraph.

(e) The department shall adopt rules to locate onsite 
sewage treatment and disposal systems, including establishing 
setback distances, to prevent groundwater contamination and 
surface water contamination and to preserve the public health. 
The rulemaking process for such rules must be completed by July 
1, 2022, and the department shall notify the Division of Law 
Revision of the date such rules are adopted. The rules must 
consider conventional and enhanced nutrient-reducing onsite 
sewage treatment and disposal system designs, impaired or 
degraded water bodies, domestic wastewater and drinking water 
infrastructure, potable water sources, nonpotable wells, 
stormwater infrastructure, the onsite sewage treatment and 
disposal system remediation plans developed pursuant to s. 
403.067(7)(a)9.b., nutrient pollution, and the recommendations 
of the onsite sewage treatment and disposal systems technical 
advisory committee established pursuant to s. 381.00652.
(f)(e) Onsite sewage treatment and disposal systems that are permitted before adoption of the rules identified in paragraph (e) may not be placed closer than:

1. Seventy-five feet from a private potable well.
2. Two hundred feet from a public potable well serving a residential or nonresidential establishment having a total sewage flow of greater than 2,000 gallons per day.
3. One hundred feet from a public potable well serving a residential or nonresidential establishment having a total sewage flow of less than or equal to 2,000 gallons per day.
4. Fifty feet from any nonpotable well.
5. Ten feet from any storm sewer pipe, to the maximum extent possible, but in no instance shall the setback be less than 5 feet.
6. Seventy-five feet from the mean high-water line of a tidally influenced surface water body.
7. Seventy-five feet from the mean annual flood line of a permanent nontidal surface water body.
8. Fifteen feet from the design high-water line of retention areas, detention areas, or swales designed to contain standing or flowing water for less than 72 hours after a rainfall or the design high-water level of normally dry drainage ditches or normally dry individual lot stormwater retention areas.

(f) Except as provided under paragraphs (e) and (t), no limitations shall be imposed by rule, relating to the distance between an onsite disposal system and any area that either permanently or temporarily has visible surface water.

(g) All provisions of this section and rules adopted under
this section relating to soil condition, water table elevation, distance, and other setback requirements must be equally applied to all lots, with the following exceptions:

1. Any residential lot that was platted and recorded on or after January 1, 1972, or that is part of a residential subdivision that was approved by the appropriate permitting agency on or after January 1, 1972, and that was eligible for an onsite sewage treatment and disposal system construction permit on the date of such platting and recording or approval shall be eligible for an onsite sewage treatment and disposal system construction permit, regardless of when the application for a permit is made. If rules in effect at the time the permit application is filed cannot be met, residential lots platted and recorded or approved on or after January 1, 1972, shall, to the maximum extent possible, comply with the rules in effect at the time the permit application is filed. At a minimum, however, those residential lots platted and recorded or approved on or after January 1, 1972, but before January 1, 1983, shall comply with those rules in effect on January 1, 1983, and those residential lots platted and recorded or approved on or after January 1, 1983, shall comply with those rules in effect at the time of such platting and recording or approval. In determining the maximum extent of compliance with current rules that is possible, the department shall allow structures and appurtenances thereto which were authorized at the time such lots were platted and recorded or approved.

2. Lots platted before 1972 are subject to a 50-foot minimum surface water setback and are not subject to lot size requirements. The projected daily flow for onsite sewage
treatment and disposal systems for lots platted before 1972 may not exceed:

a. Two thousand five hundred gallons per acre per day for lots served by public water systems as defined in s. 403.852.

b. One thousand five hundred gallons per acre per day for lots served by water systems regulated under s. 381.0062.

(h)1. The department may grant variances in hardship cases which may be less restrictive than the provisions specified in this section. If a variance is granted and the onsite sewage treatment and disposal system construction permit has been issued, the variance may be transferred with the system construction permit, if the transferee files, within 60 days after the transfer of ownership, an amended construction permit application providing all corrected information and proof of ownership of the property and if the same variance would have been required for the new owner of the property as was originally granted to the original applicant for the variance. There is no fee associated with the processing of this supplemental information. A variance may not be granted under this section until the department is satisfied that:

a. The hardship was not caused intentionally by the action of the applicant;

b. No reasonable alternative, taking into consideration factors such as cost, exists for the treatment of the sewage; and

c. The discharge from the onsite sewage treatment and disposal system will not adversely affect the health of the applicant or the public or significantly degrade the groundwater or surface waters.
Where soil conditions, water table elevation, and setback provisions are determined by the department to be satisfactory, special consideration must be given to those lots platted before 1972.

2. The department shall appoint and staff a variance review and advisory committee, which shall meet monthly to recommend agency action on variance requests. The committee shall make its recommendations on variance requests at the meeting in which the application is scheduled for consideration, except for an extraordinary change in circumstances, the receipt of new information that raises new issues, or when the applicant requests an extension. The committee shall consider the criteria in subparagraph 1. in its recommended agency action on variance requests and shall also strive to allow property owners the full use of their land where possible. The committee consists of the following:

a. The Secretary of Environmental Protection or his or her designee.

b. A representative from the county health departments.

c. A representative from the home building industry recommended by the Florida Home Builders Association.

d. A representative from the septic tank industry recommended by the Florida Onsite Wastewater Association.

e. A representative from the Department of Environmental Protection.

f. A representative from the real estate industry who is also a developer in this state who develops lots using onsite sewage treatment and disposal systems, recommended by the
576-02463-20

Florida Association of Realtors.

   g. A representative from the engineering profession recommended by the Florida Engineering Society.

Members shall be appointed for a term of 3 years, with such appointments being staggered so that the terms of no more than two members expire in any one year. Members shall serve without remuneration, but if requested, shall be reimbursed for per diem and travel expenses as provided in s. 112.061.

   (i) A construction permit may not be issued for an onsite sewage treatment and disposal system in any area zoned or used for industrial or manufacturing purposes, or its equivalent, where a publicly owned or investor-owned sewage treatment system is available, or where a likelihood exists that the system will receive toxic, hazardous, or industrial waste. An existing onsite sewage treatment and disposal system may be repaired if a publicly owned or investor-owned sewerage system is not available within 500 feet of the building sewer stub-out and if system construction and operation standards can be met. This paragraph does not require publicly owned or investor-owned sewerage treatment systems to accept anything other than domestic wastewater.

   1. A building located in an area zoned or used for industrial or manufacturing purposes, or its equivalent, when such building is served by an onsite sewage treatment and disposal system, must not be occupied until the owner or tenant has obtained written approval from the department. The department may shall not grant approval when the proposed use of the system is to dispose of toxic, hazardous, or industrial
wastewater or toxic or hazardous chemicals.

2. Each person who owns or operates a business or facility in an area zoned or used for industrial or manufacturing purposes, or its equivalent, or who owns or operates a business that has the potential to generate toxic, hazardous, or industrial wastewater or toxic or hazardous chemicals, and uses an onsite sewage treatment and disposal system that is installed on or after July 5, 1989, must obtain an annual system operating permit from the department. A person who owns or operates a business that uses an onsite sewage treatment and disposal system that was installed and approved before July 5, 1989, need not obtain a system operating permit. However, upon change of ownership or tenancy, the new owner or operator must notify the department of the change, and the new owner or operator must obtain an annual system operating permit, regardless of the date that the system was installed or approved.

3. The department shall periodically review and evaluate the continued use of onsite sewage treatment and disposal systems in areas zoned or used for industrial or manufacturing purposes, or its equivalent, and may require the collection and analyses of samples from within and around such systems. If the department finds that toxic or hazardous chemicals or toxic, hazardous, or industrial wastewater have been or are being disposed of through an onsite sewage treatment and disposal system, the department shall initiate enforcement actions against the owner or tenant to ensure adequate cleanup, treatment, and disposal.

(j) An onsite sewage treatment and disposal system designed by a professional engineer registered in the state and certified
by such engineer as complying with performance criteria adopted by the department must be approved by the department subject to the following:

1. The performance criteria applicable to engineer-designed systems must be limited to those necessary to ensure that such systems do not adversely affect the public health or significantly degrade the groundwater or surface water. Such performance criteria shall include consideration of the quality of system effluent, the proposed total sewage flow per acre, wastewater treatment capabilities of the natural or replaced soil, water quality classification of the potential surface-water-receiving body, and the structural and maintenance viability of the system for the treatment of domestic wastewater. However, performance criteria shall address only the performance of a system and not a system’s design.

2. A person electing to utilize an engineer-designed system shall, upon completion of the system design, submit such design, certified by a registered professional engineer, to the county health department. The county health department may utilize an outside consultant to review the engineer-designed system, with the actual cost of such review to be borne by the applicant. Within 5 working days after receiving an engineer-designed system permit application, the county health department shall request additional information if the application is not complete. Within 15 working days after receiving a complete application for an engineer-designed system, the county health department either shall issue the permit or, if it determines that the system does not comply with the performance criteria, shall notify the applicant of that determination and refer the
application to the department for a determination as to whether the system should be approved, disapproved, or approved with modification. The department engineer’s determination shall prevail over the action of the county health department. The applicant shall be notified in writing of the department’s determination and of the applicant’s rights to pursue a variance or seek review under the provisions of chapter 120.

3. The owner of an engineer-designed performance-based system must maintain a current maintenance service agreement with a maintenance entity permitted by the department. The maintenance entity shall inspect each system at least twice each year and shall report quarterly to the department on the number of systems inspected and serviced. The reports may be submitted electronically.

4. The property owner of an owner-occupied, single-family residence may be approved and permitted by the department as a maintenance entity for his or her own performance-based treatment system upon written certification from the system manufacturer’s approved representative that the property owner has received training on the proper installation and service of the system. The maintenance service agreement must conspicuously disclose that the property owner has the right to maintain his or her own system and is exempt from contractor registration requirements for performing construction, maintenance, or repairs on the system but is subject to all permitting requirements.

5. The property owner shall obtain a biennial system operating permit from the department for each system. The department shall inspect the system at least annually, or on
such periodic basis as the fee collected permits, and may
collect system-effluent samples if appropriate to determine
compliance with the performance criteria. The fee for the
biennial operating permit shall be collected beginning with the
second year of system operation.

6. If an engineer-designed system fails to properly
function or fails to meet performance standards, the system
shall be re-engineered, if necessary, to bring the system into
compliance with the provisions of this section.

(k) An innovative system may be approved in conjunction
with an engineer-designed site-specific system which is
certified by the engineer to meet the performance-based criteria
adopted by the department.

(l) For the Florida Keys, the department shall adopt a
special rule for the construction, installation, modification,
operation, repair, maintenance, and performance of onsite sewage
treatment and disposal systems which considers the unique soil
conditions and water table elevations, densities, and setback
requirements. On lots where a setback distance of 75 feet from
surface waters, saltmarsh, and buttonwood association habitat
areas cannot be met, an injection well, approved and permitted
by the department, may be used for disposal of effluent from
onsite sewage treatment and disposal systems. The following
additional requirements apply to onsite sewage treatment and
disposal systems in Monroe County:

1. The county, each municipality, and those special
districts established for the purpose of the collection,
transmission, treatment, or disposal of sewage shall ensure, in
accordance with the specific schedules adopted by the
Administration Commission under s. 380.0552, the completion of onsite sewage treatment and disposal system upgrades to meet the requirements of this paragraph.

2. Onsite sewage treatment and disposal systems must cease discharge by December 31, 2015, or must comply with department rules and provide the level of treatment which, on a permitted annual average basis, produces an effluent that contains no more than the following concentrations:
   a. Biochemical Oxygen Demand (CBOD5) of 10 mg/l.
   b. Suspended Solids of 10 mg/l.
   c. Total Nitrogen, expressed as N, of 10 mg/l or a reduction in nitrogen of at least 70 percent. A system that has been tested and certified to reduce nitrogen concentrations by at least 70 percent shall be deemed to be in compliance with this standard.
   d. Total Phosphorus, expressed as P, of 1 mg/l.

In addition, onsite sewage treatment and disposal systems discharging to an injection well must provide basic disinfection as defined by department rule.

3. In areas not scheduled to be served by a central sewer, onsite sewage treatment and disposal systems must, by December 31, 2015, comply with department rules and provide the level of treatment described in subparagraph 2.

4. In areas scheduled to be served by central sewer by December 31, 2015, if the property owner has paid a connection fee or assessment for connection to the central sewer system, the property owner may install a holding tank with a high water alarm or an onsite sewage treatment and disposal system that
meets the following minimum standards:

a. The existing tanks must be pumped and inspected and certified as being watertight and free of defects in accordance with department rule; and

b. A sand-lined drainfield or injection well in accordance with department rule must be installed.

5. Onsite sewage treatment and disposal systems must be monitored for total nitrogen and total phosphorus concentrations as required by department rule.

6. The department shall enforce proper installation, operation, and maintenance of onsite sewage treatment and disposal systems pursuant to this chapter, including ensuring that the appropriate level of treatment described in subparagraph 2. is met.

7. The authority of a local government, including a special district, to mandate connection of an onsite sewage treatment and disposal system is governed by s. 4, chapter 99-395, Laws of Florida.

8. Notwithstanding any other provision of law, an onsite sewage treatment and disposal system installed after July 1, 2010, in unincorporated Monroe County, excluding special wastewater districts, that complies with the standards in subparagraph 2. is not required to connect to a central sewer system until December 31, 2020.

(m) No product sold in the state for use in onsite sewage treatment and disposal systems may contain any substance in concentrations or amounts that would interfere with or prevent the successful operation of such system, or that would cause discharges from such systems to violate applicable water quality
standards. The department shall publish criteria for products known or expected to meet the conditions of this paragraph. In the event a product does not meet such criteria, such product may be sold if the manufacturer satisfactorily demonstrates to the department that the conditions of this paragraph are met.

(n) Evaluations for determining the seasonal high-water table elevations or the suitability of soils for the use of a new onsite sewage treatment and disposal system shall be performed by department personnel, professional engineers registered in the state, or such other persons with expertise, as defined by rule, in making such evaluations. Evaluations for determining mean annual flood lines shall be performed by those persons identified in paragraph (2)(k). The department shall accept evaluations submitted by professional engineers and such other persons as meet the expertise established by this section or by rule unless the department has a reasonable scientific basis for questioning the accuracy or completeness of the evaluation.

(o) The department shall appoint a research review and advisory committee, which shall meet at least semiannually. The committee shall advise the department on directions for new research, review and rank proposals for research contracts, and review draft research reports and make comments. The committee is comprised of:

1. A representative of the Secretary of Environmental Protection State Surgeon General, or his or her designee.
2. A representative from the septic tank industry.
3. A representative from the home building industry.
4. A representative from an environmental interest group.
5. A representative from the State University System, from a department knowledgeable about onsite sewage treatment and disposal systems.

6. A professional engineer registered in this state who has work experience in onsite sewage treatment and disposal systems.

7. A representative from local government who is knowledgeable about domestic wastewater treatment.

8. A representative from the real estate profession.

9. A representative from the restaurant industry.

10. A consumer.

Members shall be appointed for a term of 3 years, with the appointments being staggered so that the terms of no more than four members expire in any one year. Members shall serve without remuneration, but are entitled to reimbursement for per diem and travel expenses as provided in s. 112.061.

(p) An application for an onsite sewage treatment and disposal system permit shall be completed in full, signed by the owner or the owner’s authorized representative, or by a contractor licensed under chapter 489, and shall be accompanied by all required exhibits and fees. No specific documentation of property ownership shall be required as a prerequisite to the review of an application or the issuance of a permit. The issuance of a permit does not constitute determination by the department of property ownership.

(q) The department may not require any form of subdivision analysis of property by an owner, developer, or subdivider prior to submission of an application for an onsite sewage treatment and disposal system.
(r) Nothing in this section limits the power of a municipality or county to enforce other laws for the protection of the public health and safety.

(s) In the siting of onsite sewage treatment and disposal systems, including drainfields, shoulders, and slopes, guttering may not be required on single-family residential dwelling units for systems located greater than 5 feet from the roof drip line of the house. If guttering is used on residential dwelling units, the downspouts shall be directed away from the drainfield.

(t) Notwithstanding the provisions of subparagraph (g)1., onsite sewage treatment and disposal systems located in floodways of the Suwannee and Aucilla Rivers must adhere to the following requirements:

1. The absorption surface of the drainfield may not be subject to flooding based on 10-year flood elevations.

Provided, however, for lots or parcels created by the subdivision of land in accordance with applicable local government regulations prior to January 17, 1990, if an applicant cannot construct a drainfield system with the absorption surface of the drainfield at an elevation equal to or above 10-year flood elevation, the department shall issue a permit for an onsite sewage treatment and disposal system within the 10-year floodplain of rivers, streams, and other bodies of flowing water if all of the following criteria are met:

   a. The lot is at least one-half acre in size;

   b. The bottom of the drainfield is at least 36 inches above the 2-year flood elevation; and

   c. The applicant installs either: a waterless,
incinerating, or organic waste composting toilet and a graywater system and drainfield in accordance with department rules; an aerobic treatment unit and drainfield in accordance with department rules; a system approved by the State Health Office that is capable of reducing effluent nitrate by at least 50 percent in accordance with department rules; or a system other than a system using alternative drainfield materials in accordance with department rules approved by the county health department pursuant to department rule other than a system using alternative drainfield materials. The United States Department of Agriculture Soil Conservation Service soil maps, State of Florida Water Management District data, and Federal Emergency Management Agency Flood Insurance maps are resources that shall be used to identify flood-prone areas.

2. The use of fill or mounding to elevate a drainfield system out of the 10-year floodplain of rivers, streams, or other bodies of flowing water may shall not be permitted if such a system lies within a regulatory floodway of the Suwannee and Aucilla Rivers. In cases where the 10-year flood elevation does not coincide with the boundaries of the regulatory floodway, the regulatory floodway will be considered for the purposes of this subsection to extend at a minimum to the 10-year flood elevation.

(u)1. The owner of an aerobic treatment unit system shall maintain a current maintenance service agreement with an aerobic treatment unit maintenance entity permitted by the department. The maintenance entity shall inspect each aerobic treatment unit system at least twice each year and shall report quarterly to the department on the number of aerobic treatment unit systems
inspected and serviced. The reports may be submitted electronically.

2. The property owner of an owner-occupied, single-family residence may be approved and permitted by the department as a maintenance entity for his or her own aerobic treatment unit system upon written certification from the system manufacturer’s approved representative that the property owner has received training on the proper installation and service of the system. The maintenance entity service agreement must conspicuously disclose that the property owner has the right to maintain his or her own system and is exempt from contractor registration requirements for performing construction, maintenance, or repairs on the system but is subject to all permitting requirements.

3. A septic tank contractor licensed under part III of chapter 489, if approved by the manufacturer, may not be denied access by the manufacturer to aerobic treatment unit system training or spare parts for maintenance entities. After the original warranty period, component parts for an aerobic treatment unit system may be replaced with parts that meet manufacturer’s specifications but are manufactured by others. The maintenance entity shall maintain documentation of the substitute part’s equivalency for 2 years and shall provide such documentation to the department upon request.

4. The owner of an aerobic treatment unit system shall obtain a system operating permit from the department and allow the department to inspect during reasonable hours each aerobic treatment unit system at least annually, and such inspection may include collection and analysis of system-effluent samples for
performance criteria established by rule of the department.

(v) The department may require the submission of detailed system construction plans that are prepared by a professional engineer registered in this state. The department shall establish by rule criteria for determining when such a submission is required.

(w) Any permit issued and approved by the department for the installation, modification, or repair of an onsite sewage treatment and disposal system shall transfer with the title to the property in a real estate transaction. A title may not be encumbered at the time of transfer by new permit requirements by a governmental entity for an onsite sewage treatment and disposal system which differ from the permitting requirements in effect at the time the system was permitted, modified, or repaired. An inspection of a system may not be mandated by a governmental entity at the point of sale in a real estate transaction. This paragraph does not affect a septic tank phase-out deferral program implemented by a consolidated government as defined in s. 9, Art. VIII of the State Constitution (1885).

(x) A governmental entity, including a municipality, county, or statutorily created commission, may not require an engineer-designed performance-based treatment system, excluding a passive engineer-designed performance-based treatment system, before the completion of the Florida Onsite Sewage Nitrogen Reduction Strategies Project. This paragraph does not apply to a governmental entity, including a municipality, county, or statutorily created commission, which adopted a local law, ordinance, or regulation on or before January 31, 2012. Notwithstanding this paragraph, an engineer-designed
performance-based treatment system may be used to meet the
requirements of the variance review and advisory committee
recommendations.

(y) 1. An onsite sewage treatment and disposal system is not
considered abandoned if the system is disconnected from a
structure that was made unusable or destroyed following a
disaster and if the system was properly functioning at the time
of disconnection and was not adversely affected by the disaster.
The onsite sewage treatment and disposal system may be
reconnected to a rebuilt structure if:
   a. The reconnection of the system is to the same type of
structure which contains the same number of bedrooms or fewer,
   if the square footage of the structure is less than or equal to
   110 percent of the original square footage of the structure that
   existed before the disaster;
   b. The system is not a sanitary nuisance; and
   c. The system has not been altered without prior
authorization.

2. An onsite sewage treatment and disposal system that
serves a property that is foreclosed upon is not considered
abandoned.

(z) If an onsite sewage treatment and disposal system
permittee receives, relies upon, and undertakes construction of
a system based upon a validly issued construction permit under
rules applicable at the time of construction but a change to a
rule occurs within 5 years after the approval of the system for
construction but before the final approval of the system, the
rules applicable and in effect at the time of construction
approval apply at the time of final approval if fundamental site
conditions have not changed between the time of construction approval and final approval.

(aa) An existing-system inspection or evaluation and assessment, or a modification, replacement, or upgrade of an onsite sewage treatment and disposal system is not required for a remodeling addition or modification to a single-family home if a bedroom is not added. However, a remodeling addition or modification to a single-family home may not cover any part of the existing system or encroach upon a required setback or the unobstructed area. To determine if a setback or the unobstructed area is impacted, the local health department shall review and verify a floor plan and site plan of the proposed remodeling addition or modification to the home submitted by a remodeler which shows the location of the system, including the distance of the remodeling addition or modification to the home from the onsite sewage treatment and disposal system. The local health department may visit the site or otherwise determine the best means of verifying the information submitted. A verification of the location of a system is not an inspection or evaluation and assessment of the system. The review and verification must be completed within 7 business days after receipt by the local health department of a floor plan and site plan. If the review and verification is not completed within such time, the remodeling addition or modification to the single-family home, for the purposes of this paragraph, is approved.

Section 5. Section 381.00652, Florida Statutes, is created to read:

381.00652 Onsite sewage treatment and disposal systems technical advisory committee.
An onsite sewage treatment and disposal systems technical advisory committee, a committee as defined in s. 20.03(8), is created within the department. The committee shall:

(a) Provide recommendations to increase the availability in the marketplace of enhanced nutrient-reducing onsite sewage treatment and disposal systems, including systems that are cost-effective, low-maintenance, and reliable.

(b) Consider and recommend regulatory options, such as fast-track approval, prequalification, or expedited permitting, to facilitate the introduction and use of enhanced nutrient-reducing onsite sewage treatment and disposal systems that have been reviewed and approved by a national agency or organization, such as the American National Standards Institute systems approved by the NSF International.

(c) Provide recommendations for appropriate setback distances for onsite sewage treatment and disposal systems from surface water, groundwater, and wells.

(2) The department shall use existing and available resources to administer and support the activities of the committee.

(3)(a) By August 1, 2021, the department, in consultation with the Department of Health, shall appoint no more than nine members to the committee, including, but not limited to, the following:

1. A professional engineer.
2. A septic tank contractor.
3. A representative from the home building industry.
4. A representative from the real estate industry.
5. A representative from the onsite sewage treatment and disposal system industry.

Page 38 of 98

1/24/2020 2:57:45 PM
disposal system industry.
   6. A representative from local government.
   7. Two representatives from the environmental community.
   8. A representative of the scientific and technical
       community who has substantial expertise in the areas of the fate
       and transport of water pollutants, toxicology, epidemiology,
       geology, biology, or environmental sciences.

(b) Members shall serve without compensation and are not
entitled to reimbursement for per diem or travel expenses.

(4) By January 1, 2022, the committee shall submit its
recommendations to the Governor, the President of the Senate,
and the Speaker of the House of Representatives.

(5) This section expires August 15, 2022.

(6) For purposes of this section, the term “department”
means the Department of Environmental Protection.

Section 6. Effective July 1, 2021, section 381.0068,
Florida Statutes, is repealed.

Section 7. Present subsections (14) through (44) of section
403.061, Florida Statutes, are redesignated as subsections (15)
through (45), respectively, a new subsection (14) is added to
that section, and subsection (7) of that section is amended, to
read:

403.061 Department; powers and duties.—The department shall
have the power and the duty to control and prohibit pollution of
air and water in accordance with the law and rules adopted and
promulgated by it and, for this purpose, to:

(7) Adopt rules pursuant to ss. 120.536(1) and 120.54 to
implement the provisions of this act. Any rule adopted pursuant
to this act must be consistent with the provisions of
576-02463-20

federal law, if any, relating to control of emissions from motor
vehicles, effluent limitations, pretreatment requirements, or
standards of performance. A county, municipality, or
political subdivision may not adopt or enforce any local
ordinance, special law, or local regulation requiring the
installation of Stage II vapor recovery systems, as currently
defined by department rule, unless such county, municipality, or
political subdivision is or has been in the past designated by
federal regulation as a moderate, serious, or severe ozone
nonattainment area. Rules adopted pursuant to this act may not
require dischargers of waste into waters of the state to
improve natural background conditions. The department shall
adopt rules to reasonably limit, reduce, and eliminate domestic
wastewater collection and transmission system pipe leakages and
inflow and infiltration. Discharges from steam electric
generating plants existing or licensed under this chapter on
July 1, 1984, may not be required to be treated to a
greater extent than may be necessary to assure that the quality
of nonthermal components of discharges from nonrecirculated
cooling water systems is as high as the quality of the makeup
waters; that the quality of nonthermal components of discharges
from recirculated cooling water systems is no lower than is
allowed for blowdown from such systems; or that the quality of
noncooling system discharges which receive makeup water from a
receiving body of water which does not meet applicable
department water quality standards is as high as the quality of
the receiving body of water. The department may not adopt
standards more stringent than federal regulations, except as
provided in s. 403.804.
1158 (14) In order to promote resilient utilities, require
1159 public utilities or their affiliated companies holding, applying
1160 for, or renewing a domestic wastewater discharge permit to file
1161 annual reports and other data regarding transactions or
1162 allocations of common costs and expenditures on pollution
1163 mitigation and prevention among the utility’s permitted systems,
1164 including, but not limited to, the prevention of sanitary sewer
1165 overflows, collection and transmission system pipe leakages, and
1166 inflow and infiltration. The department shall adopt rules to
1167 implement this subsection.

The department shall implement such programs in conjunction with
its other powers and duties and shall place special emphasis on
reducing and eliminating contamination that presents a threat to
humans, animals or plants, or to the environment.

Section 8. Section 403.0616, Florida Statutes, is created
to read:

403.0616 Real-time water quality monitoring program.—
(1) Subject to appropriation, the department shall
establish a real-time water quality monitoring program to assist
in the restoration, preservation, and enhancement of impaired
waterbodies and coastal resources.

(2) In order to expedite the creation and implementation of
the program, the department is encouraged to form public-private
partnerships with established scientific entities that have
proven existing real-time water quality monitoring equipment and
experience in deploying the equipment.

Section 9. Subsection (7) of section 403.067, Florida
Statutes, is amended to read:
576-02463-20

403.067 Establishment and implementation of total maximum daily loads.—

(7) DEVELOPMENT OF BASIN MANAGEMENT PLANS AND IMPLEMENTATION OF TOTAL MAXIMUM DAILY LOADS.—

(a) Basin management action plans.—

1. In developing and implementing the total maximum daily load for a water body, the department, or the department in conjunction with a water management district, may develop a basin management action plan that addresses some or all of the watersheds and basins tributary to the water body. Such plan must integrate the appropriate management strategies available to the state through existing water quality protection programs to achieve the total maximum daily loads and may provide for phased implementation of these management strategies to promote timely, cost-effective actions as provided for in s. 403.151. The plan must establish a schedule implementing the management strategies, establish a basis for evaluating the plan’s effectiveness, and identify feasible funding strategies for implementing the plan’s management strategies. The management strategies may include regional treatment systems or other public works, where appropriate, and voluntary trading of water quality credits to achieve the needed pollutant load reductions.

2. A basin management action plan must equitably allocate, pursuant to paragraph (6)(b), pollutant reductions to individual basins, as a whole to all basins, or to each identified point source or category of nonpoint sources, as appropriate. For nonpoint sources for which best management practices have been adopted, the initial requirement specified by the plan must be those practices developed pursuant to paragraph (c).
576-02463-20

appropriate, the plan may take into account the benefits of pollutant load reduction achieved by point or nonpoint sources that have implemented management strategies to reduce pollutant loads, including best management practices, before the development of the basin management action plan. The plan must also identify the mechanisms that will address potential future increases in pollutant loading.

3. The basin management action planning process is intended to involve the broadest possible range of interested parties, with the objective of encouraging the greatest amount of cooperation and consensus possible. In developing a basin management action plan, the department shall assure that key stakeholders, including, but not limited to, applicable local governments, water management districts, the Department of Agriculture and Consumer Services, other appropriate state agencies, local soil and water conservation districts, environmental groups, regulated interests, and affected pollution sources, are invited to participate in the process. The department shall hold at least one public meeting in the vicinity of the watershed or basin to discuss and receive comments during the planning process and shall otherwise encourage public participation to the greatest practicable extent. Notice of the public meeting must be published in a newspaper of general circulation in each county in which the watershed or basin lies at least not less than 5 days, but not more than 15 days, before the public meeting. A basin management action plan does not supplant or otherwise alter any assessment made under subsection (3) or subsection (4) or any calculation or initial allocation.
4. Each new or revised basin management action plan shall include:
   a. The appropriate management strategies available through existing water quality protection programs to achieve total maximum daily loads, which may provide for phased implementation to promote timely, cost-effective actions as provided for in s. 403.151;
   b. A description of best management practices adopted by rule;
   c. A list of projects in priority ranking with a planning-level cost estimate and estimated date of completion for each listed project;
   d. The source and amount of financial assistance to be made available by the department, a water management district, or other entity for each listed project, if applicable; and
   e. A planning-level estimate of each listed project’s expected load reduction, if applicable.

5. The department shall adopt all or any part of a basin management action plan and any amendment to such plan by secretarial order pursuant to chapter 120 to implement the provisions of this section.

6. The basin management action plan must include milestones for implementation and water quality improvement, and an associated water quality monitoring component sufficient to evaluate whether reasonable progress in pollutant load reductions is being achieved over time. An assessment of progress toward these milestones shall be conducted every 5 years, and revisions to the plan shall be made as appropriate. Revisions to the basin management action plan shall be made by
the department in cooperation with basin stakeholders. Revisions to the management strategies required for nonpoint sources must follow the procedures set forth in subparagraph (c)4. Revised basin management action plans must be adopted pursuant to subparagraph 5.

7. In accordance with procedures adopted by rule under paragraph (9)(c), basin management action plans, and other pollution control programs under local, state, or federal authority as provided in subsection (4), may allow point or nonpoint sources that will achieve greater pollutant reductions than required by an adopted total maximum daily load or wasteload allocation to generate, register, and trade water quality credits for the excess reductions to enable other sources to achieve their allocation; however, the generation of water quality credits does not remove the obligation of a source or activity to meet applicable technology requirements or adopted best management practices. Such plans must allow trading between NPDES permittees, and trading that may or may not involve NPDES permittees, where the generation or use of the credits involve an entity or activity not subject to department water discharge permits whose owner voluntarily elects to obtain department authorization for the generation and sale of credits.

8. The provisions of the department’s rule relating to the equitable abatement of pollutants into surface waters do not apply to water bodies or water body segments for which a basin management plan that takes into account future new or expanded activities or discharges has been adopted under this section.

9. In order to promote resilient utilities, if the department identifies domestic wastewater facilities or onsite
sewage treatment and disposal systems as contributors of at least 20 percent of point source or nonpoint source nutrient pollution or if the department determines remediation is necessary to achieve the total maximum daily load, a basin management action plan for a nutrient total maximum daily load must include the following:

a. A wastewater treatment plan that addresses domestic wastewater developed by each local government in cooperation with the department, the water management district, and the public and private domestic wastewater facilities within the jurisdiction of the local government. The wastewater treatment plan must:

   (I) Provide for construction, expansion, or upgrades necessary to achieve the total maximum daily load requirements applicable to the domestic wastewater facility.

   (II) Include the permitted capacity in average annual gallons per day for the domestic wastewater facility; the average nutrient concentration and the estimated average nutrient load of the domestic wastewater; a timeline of the dates by which the construction of any facility improvements will begin and be completed and the date by which operations of the improved facility will begin; the estimated cost of the improvements; and the identity of responsible parties.

The wastewater treatment plan must be adopted as part of the basin management action plan no later than July 1, 2025. A local government that does not have a domestic wastewater treatment facility in its jurisdiction is not required to develop a wastewater treatment plan unless there is a demonstrated need to
establish a domestic wastewater treatment facility within its jurisdiction to improve water quality necessary to achieve a total maximum daily load. A local government is not responsible for a private domestic wastewater facility’s compliance with a basin management action plan.

b. An onsite sewage treatment and disposal system remediation plan developed by each local government in cooperation with the department, the Department of Health, water management districts, and public and private domestic wastewater facilities.

(I) The onsite sewage treatment and disposal system remediation plan must identify cost-effective and financially feasible projects necessary to achieve the nutrient load reductions required for onsite sewage treatment and disposal systems. To identify cost-effective and financially feasible projects for remediation of onsite sewage treatment and disposal systems, the local government shall:

(A) Include an inventory of onsite sewage treatment and disposal systems based on the best information available;

(B) Identify onsite sewage treatment and disposal systems that would be eliminated through connection to existing or future central domestic wastewater infrastructure in the jurisdiction or domestic wastewater service area of the local government, that would be replaced with or upgraded to enhanced nutrient-reducing systems, or that would remain on conventional onsite sewage treatment and disposal systems;

(C) Estimate the costs of potential onsite sewage treatment and disposal systems connections, upgrades, or replacements; and

(D) Identify deadlines and interim milestones for the
planning, design, and construction of projects.

(II) The department shall adopt the onsite sewage treatment and disposal system remediation plan as part of the basin management action plan no later than July 1, 2025, or as required for Outstanding Florida Springs under s. 373.807.

10. When identifying wastewater projects in a basin management action plan, the department may not require the higher cost option if it achieves the same nutrient load reduction as a lower cost option.

(b) Total maximum daily load implementation.—

1. The department shall be the lead agency in coordinating the implementation of the total maximum daily loads through existing water quality protection programs. Application of a total maximum daily load by a water management district must be consistent with this section and does not require the issuance of an order or a separate action pursuant to s. 120.536(1) or s. 120.54 for the adoption of the calculation and allocation previously established by the department. Such programs may include, but are not limited to:

a. Permitting and other existing regulatory programs, including water-quality-based effluent limitations;

b. Nonregulatory and incentive-based programs, including best management practices, cost sharing, waste minimization, pollution prevention, agreements established pursuant to s. 403.061(22) s. 403.061(21), and public education;

c. Other water quality management and restoration activities, for example surface water improvement and management plans approved by water management districts or basin management action plans developed pursuant to this subsection;
d. Trading of water quality credits or other equitable economically based agreements;

e. Public works including capital facilities; or

f. Land acquisition.

2. For a basin management action plan adopted pursuant to paragraph (a), any management strategies and pollutant reduction requirements associated with a pollutant of concern for which a total maximum daily load has been developed, including effluent limits set forth for a discharger subject to NPDES permitting, if any, must be included in a timely manner in subsequent NPDES permits or permit modifications for that discharger. The department may not impose limits or conditions implementing an adopted total maximum daily load in an NPDES permit until the permit expires, the discharge is modified, or the permit is reopened pursuant to an adopted basin management action plan.

a. Absent a detailed allocation, total maximum daily loads must be implemented through NPDES permit conditions that provide for a compliance schedule. In such instances, a facility’s NPDES permit must allow time for the issuance of an order adopting the basin management action plan. The time allowed for the issuance of an order adopting the plan may not exceed 5 years. Upon issuance of an order adopting the plan, the permit must be reopened or renewed, as necessary, and permit conditions consistent with the plan must be established. Notwithstanding the other provisions of this subparagraph, upon request by an NPDES permittee, the department as part of a permit issuance, renewal, or modification may establish individual allocations before the adoption of a basin management action plan.

b. For holders of NPDES municipal separate storm sewer
system permits and other stormwater sources, implementation of a total maximum daily load or basin management action plan must be achieved, to the maximum extent practicable, through the use of best management practices or other management measures.

c. The basin management action plan does not relieve the discharger from any requirement to obtain, renew, or modify an NPDES permit or to abide by other requirements of the permit.

d. Management strategies set forth in a basin management action plan to be implemented by a discharger subject to permitting by the department must be completed pursuant to the schedule set forth in the basin management action plan. This implementation schedule may extend beyond the 5-year term of an NPDES permit.

e. Management strategies and pollution reduction requirements set forth in a basin management action plan for a specific pollutant of concern are not subject to challenge under chapter 120 at the time they are incorporated, in an identical form, into a subsequent NPDES permit or permit modification.

f. For nonagricultural pollutant sources not subject to NPDES permitting but permitted pursuant to other state, regional, or local water quality programs, the pollutant reduction actions adopted in a basin management action plan must be implemented to the maximum extent practicable as part of those permitting programs.

g. A nonpoint source discharger included in a basin management action plan must demonstrate compliance with the pollutant reductions established under subsection (6) by implementing the appropriate best management practices established pursuant to paragraph (c) or conducting water
quality monitoring prescribed by the department or a water
management district. A nonpoint source discharger may, in
accordance with department rules, supplement the implementation
of best management practices with water quality credit trades in
order to demonstrate compliance with the pollutant reductions
established under subsection (6).

h. A nonpoint source discharger included in a basin
management action plan may be subject to enforcement action by
the department or a water management district based upon a
failure to implement the responsibilities set forth in sub-
paragraph g.

i. A landowner, discharger, or other responsible person who
is implementing applicable management strategies specified in an
adopted basin management action plan may not be required by
permit, enforcement action, or otherwise to implement additional
management strategies, including water quality credit trading,
to reduce pollutant loads to attain the pollutant reductions
established pursuant to subsection (6) and shall be deemed to be
in compliance with this section. This subparagraph does not
limit the authority of the department to amend a basin
management action plan as specified in subparagraph (a)6.

(c) Best management practices.—

1. The department, in cooperation with the water management
districts and other interested parties, as appropriate, may
develop suitable interim measures, best management practices, or
other measures necessary to achieve the level of pollution
reduction established by the department for nonagricultural
nonpoint pollutant sources in allocations developed pursuant to
subsection (6) and this subsection. These practices and measures
may be adopted by rule by the department and the water
management districts and, where adopted by rule, shall be
implemented by those parties responsible for nonagricultural
nonpoint source pollution.

2. The Department of Agriculture and Consumer Services may
develop and adopt by rule pursuant to ss. 120.536(1) and 120.54
suitable interim measures, best management practices, or other
measures necessary to achieve the level of pollution reduction
established by the department for agricultural pollutant sources
in allocations developed pursuant to subsection (6) and this
subsection or for programs implemented pursuant to paragraph
(12)(b). These practices and measures may be implemented by
those parties responsible for agricultural pollutant sources and
the department, the water management districts, and the
Department of Agriculture and Consumer Services shall assist
with implementation. In the process of developing and adopting
rules for interim measures, best management practices, or other
measures, the Department of Agriculture and Consumer Services
shall consult with the department, the Department of Health, the
water management districts, representatives from affected
farming groups, and environmental group representatives. Such
rules must also incorporate provisions for a notice of intent to
implement the practices and a system to assure the
implementation of the practices, including site inspection and
recordkeeping requirements.

3. Where interim measures, best management practices, or
other measures are adopted by rule, the effectiveness of such
practices in achieving the levels of pollution reduction
established in allocations developed by the department pursuant
to subsection (6) and this subsection or in programs implemented pursuant to paragraph (12)(b) must be verified at representative sites by the department. The department shall use best professional judgment in making the initial verification that the best management practices are reasonably expected to be effective and, where applicable, must notify the appropriate water management district or the Department of Agriculture and Consumer Services of its initial verification before the adoption of a rule proposed pursuant to this paragraph. Implementation, in accordance with rules adopted under this paragraph, of practices that have been initially verified to be effective, or verified to be effective by monitoring at representative sites, by the department, shall provide a presumption of compliance with state water quality standards and release from the provisions of s. 376.307(5) for those pollutants addressed by the practices, and the department is not authorized to institute proceedings against the owner of the source of pollution to recover costs or damages associated with the contamination of surface water or groundwater caused by those pollutants. Research projects funded by the department, a water management district, or the Department of Agriculture and Consumer Services to develop or demonstrate interim measures or best management practices shall be granted a presumption of compliance with state water quality standards and a release from the provisions of s. 376.307(5). The presumption of compliance and release is limited to the research site and only for those pollutants addressed by the interim measures or best management practices. Eligibility for the presumption of compliance and release is limited to research projects on sites where the owner
or operator of the research site and the department, a water management district, or the Department of Agriculture and Consumer Services have entered into a contract or other agreement that, at a minimum, specifies the research objectives, the cost-share responsibilities of the parties, and a schedule that details the beginning and ending dates of the project.

4. Where water quality problems are demonstrated, despite the appropriate implementation, operation, and maintenance of best management practices and other measures required by rules adopted under this paragraph, the department, a water management district, or the Department of Agriculture and Consumer Services, in consultation with the department, shall institute a reevaluation of the best management practice or other measure. Should the reevaluation determine that the best management practice or other measure requires modification, the department, a water management district, or the Department of Agriculture and Consumer Services, as appropriate, shall revise the rule to require implementation of the modified practice within a reasonable time period as specified in the rule.

5. Subject to subparagraph 6., the Department of Agriculture and Consumer Services shall provide to the department information that it obtains pursuant to subparagraph (d)3.

6. Agricultural records relating to processes or methods of production, costs of production, profits, or other financial information held by the Department of Agriculture and Consumer Services pursuant to subparagraphs 3., 4., and 5., or pursuant to any rule adopted pursuant to subparagraph 2. are confidential and exempt from s. 119.07(1) and s. 24(a), Art. I
of the State Constitution. Upon request, records made
confidential and exempt pursuant to this subparagraph shall be
released to the department or any water management district
provided that the confidentiality specified by this subparagraph
for such records is maintained.

7.6. The provisions of Subparagraphs 1. and 2. do not
preclude the department or water management district from
requiring compliance with water quality standards or with
current best management practice requirements set forth in any
applicable regulatory program authorized by law for the purpose
of protecting water quality. Additionally, subparagraphs 1. and
2. are applicable only to the extent that they do not conflict
with any rules adopted by the department that are necessary to
maintain a federally delegated or approved program.

(d) Enforcement and verification of basin management action
plans and management strategies.—

1. Basin management action plans are enforceable pursuant
to this section and ss. 403.121, 403.141, and 403.161.
Management strategies, including best management practices and
water quality monitoring, are enforceable under this chapter.

2. No later than January 1, 2017:

a. The department, in consultation with the water
management districts and the Department of Agriculture and
Consumer Services, shall initiate rulemaking to adopt procedures
to verify implementation of water quality monitoring required in
lieu of implementation of best management practices or other
measures pursuant to sub-subparagraph (b)2.g.;

b. The department, in consultation with the water
management districts and the Department of Agriculture and
Consumer Services, shall initiate rulemaking to adopt procedures to verify implementation of nonagricultural interim measures, best management practices, or other measures adopted by rule pursuant to subparagraph (c)1.; and
c. The Department of Agriculture and Consumer Services, in consultation with the water management districts and the department, shall initiate rulemaking to adopt procedures to verify implementation of agricultural interim measures, best management practices, or other measures adopted by rule pursuant to subparagraph (c)2.

The rules required under this subparagraph shall include enforcement procedures applicable to the landowner, discharger, or other responsible person required to implement applicable management strategies, including best management practices or water quality monitoring as a result of noncompliance.

3. At least every 2 years, the Department of Agriculture and Consumer Services shall perform onsite inspections of each agricultural producer that enrolls in a best management practice to ensure that such practice is being properly implemented. Such verification must include a review of the best management practice documentation required by rule adopted in accordance with subparagraph (c)2., including, but not limited to, nitrogen and phosphorous fertilizer application records, which must be collected and retained pursuant to subparagraphs (c)3., 4., and 6.

(e) Data collection and research.—

1. The Department of Agriculture and Consumer Services, the University of Florida Institute of Food and Agricultural
Sciences, and other state universities and Florida College System institutions with agricultural research programs may annually develop research plans and legislative budget requests to:

a. Evaluate and suggest enhancements to the existing adopted agricultural best management practices to reduce nutrients;

b. Develop new best management practices that, if proven effective, the Department of Agriculture and Consumer Services may adopt by rule pursuant to paragraph (c); and

c. Develop agricultural nutrient reduction projects that willing participants could implement on a site-specific, cooperative basis, in addition to best management practices. The department may consider these projects for inclusion in a basin management action plan. These nutrient reduction projects must reduce the nutrient impacts from agricultural operations on water quality when evaluated with the projects and management strategies currently included in the basin management action plan.

2. To be considered for funding, the University of Florida Institute of Food and Agricultural Sciences and other state universities and Florida College System institutions that have agricultural research programs must submit such plans to the department and the Department of Agriculture and Consumer Services by August 1 of each year.

Section 10. Section 403.0673, Florida Statutes, is created to read:

403.0673 Wastewater grant program.—A wastewater grant program is established within the Department of Environmental
Subject to the appropriation of funds by the Legislature, the department may provide grants for the following projects within a basin management action plan, an alternative restoration plan adopted by final order, or a rural area of opportunity under s. 288.0656 which will individually or collectively reduce excess nutrient pollution:

(a) Projects to retrofit onsite sewage treatment and disposal systems to upgrade them to enhanced nutrient-reducing onsite sewage treatment and disposal systems.

(b) Projects to construct, upgrade, or expand facilities to provide advanced waste treatment, as defined in s. 403.086(4).

(c) Projects to connect onsite sewage treatment and disposal systems to central sewer facilities.

(2) In allocating such funds, priority must be given to projects that subsidize the connection of onsite sewage treatment and disposal systems to wastewater treatment plants. First priority must be given to subsidize connection to existing infrastructure. Second priority must be given to any expansion of a collection or transmission system that promotes efficiency by planning the installation of wastewater transmission facilities to be constructed concurrently with other construction projects occurring within or along a transportation facility right-of-way. Third priority must be given to all other connection of onsite sewage treatment and disposal systems to a wastewater treatment plants. The department shall consider the estimated reduction in nutrient load per project; project readiness; cost-effectiveness of the project; overall environmental benefit of a project; the location of a project;
the availability of local matching funds; and projected water
savings or quantity improvements associated with a project.

(3) Each grant for a project described in subsection (1)
must require a minimum of a 50 percent local match of funds.
However, the department may, at its discretion, waive, in whole
or in part, this consideration of the local contribution for
proposed projects within an area designated as a rural area of
opportunity under s. 288.0656.

(4) The department shall coordinate with each water
management district, as necessary, to identify grant recipients
in each district.

(5) Beginning January 1, 2021, and each January 1
thereafter, the department shall submit a report regarding the
projects funded pursuant to this section to the Governor, the
President of the Senate, and the Speaker of the House of
Representatives.

Section 11. Section 403.0855, Florida Statutes, is created
to read:

403.0855 Biosolids management.—The Legislature finds that
it is in the best interest of this state to regulate biosolids
management in order to minimize the migration of nutrients that
impair waterbodies. The Legislature further finds that the
expedited implementation of the recommendations of the Biosolids
Technical Advisory Committee, including permitting according to
site-specific application conditions, an increased inspection
rate, groundwater and surface water monitoring protocols, and
nutrient management research, will improve biosolids management
and assist in protecting this state’s water resources and water
quality. The department shall adopt rules for biosolids
management. Rules adopted by the department pursuant to this section before the 2021 regular legislative session are not subject to s. 120.541(3). A municipality or county may enforce or extend an ordinance, a regulation, a resolution, a rule, a moratorium, or a policy, any of which was adopted before November 1, 2019, relating to the land application of Class B biosolids until the ordinance, regulation, resolution, rule, moratorium, or policy is repealed by the municipality or county.

Section 12. Present subsections (7) through (10) of section 403.086, Florida Statutes, are redesignated as subsections (8) through (11), respectively, a new subsection (7) is added to that section, and paragraph (c) of subsection (1) and subsection (2) of that section are amended, to read:

403.086 Sewage disposal facilities; advanced and secondary waste treatment.—

(1)

(c) Notwithstanding any other provisions of this chapter or chapter 373, facilities for sanitary sewage disposal may not dispose of any wastes into Old Tampa Bay, Tampa Bay, Hillsborough Bay, Boca Ciega Bay, St. Joseph Sound, Clearwater Bay, Sarasota Bay, Little Sarasota Bay, Roberts Bay, Lemon Bay, or Charlotte Harbor Bay, Indian River Lagoon beginning July 1, 2025, or into any river, stream, channel, canal, bay, bayou, sound, or other water tributary thereto, without providing advanced waste treatment, as defined in subsection (4), approved by the department. This paragraph shall not apply to facilities which were permitted by February 1, 1987, and which discharge secondary treated effluent, followed by water hyacinth treatment, to tributaries of tributaries of the named waters; or
to facilities permitted to discharge to the nontidally influenced portions of the Peace River.

(2) Any facilities for sanitary sewage disposal shall provide for secondary waste treatment, a power outage contingency plan that mitigates the impacts of power outages on the utility’s collection system and pump stations, and, in addition thereto, advanced waste treatment as deemed necessary and ordered by the Department of Environmental Protection. Failure to conform is punishable by a civil penalty of $500 for each 24-hour day or fraction thereof that such failure is allowed to continue thereafter.

(7) All facilities for sanitary sewage under subsection (2) which control a collection or transmission system of pipes and pumps to collect and transmit wastewater from domestic or industrial sources to the facility shall take steps to prevent sanitary sewer overflows or underground pipe leaks and ensure that collected wastewater reaches the facility for appropriate treatment. Facilities must use inflow and infiltration studies and leakage surveys to develop pipe assessment, repair, and replacement action plans that comply with department rule to limit, reduce, and eliminate leaks, seepages, or inputs into wastewater treatment systems’ underground pipes. The pipe assessment, repair, and replacement action plans must be reported to the department. The facility action plan must include information regarding the annual expenditures dedicated to the inflow and infiltration studies and the required replacement action plans, as well as expenditures that are dedicated to pipe assessment, repair, and replacement. The department shall adopt rules regarding the implementation of
inflow and infiltration studies and leakage surveys; however,
such department rules may not fix or revise utility rates or
budgets. Any entity subject to this subsection and s.
403.061(14) may submit one report to comply with both
provisions. Substantial compliance with this subsection is
evidence in mitigation for the purposes of assessing penalties
pursuant to ss. 403.121 and 403.141.

Section 13. Present subsections (4) through (10) of section
403.087, Florida Statutes, are redesignated as subsections (5)
through (11), respectively, and a new subsection (4) is added to
that section, to read:
403.087 Permits; general issuance; denial; revocation;
prohibition; penalty.—
(4) The department shall issue an operation permit for a
domestic wastewater treatment facility other than a facility
regulated under the National Pollutant Discharge Elimination
System Program under s. 403.0885 for a term of up to 10 years if
the facility is meeting the stated goals in its action plan
adopted pursuant to s. 403.086(7).

Section 14. Present subsections (3) and (4) of section
403.088, Florida Statutes, are redesignated as subsections (4)
and (5), respectively, a new subsection (3) is added to that
section, and paragraph (c) of subsection (2) of that section is
amended, to read:
403.088 Water pollution operation permits; conditions.—
(2)
(c) A permit shall:
1. Specify the manner, nature, volume, and frequency of the
discharge permitted;
2. Require proper operation and maintenance of any
pollution abatement facility by qualified personnel in
accordance with standards established by the department;

3. Require a deliberate, proactive approach to
investigating or surveying a significant percentage of the
domestic wastewater collection system throughout the duration of
the permit to determine pipe integrity, which must be
accomplished in an economically feasible manner. The permittee
shall submit an annual report to the department which details
facility revenues and expenditures in a manner prescribed by
department rule. The report must detail any deviation of annual
expenditures from identified system needs related to inflow and
infiltration studies; model plans for pipe assessment, repair,
and replacement; and pipe assessment, repair, and replacement
required under s. 403.086(7). Substantial compliance with this
subsection is evidence in mitigation for the purposes of
assessing penalties pursuant to ss. 403.121 and 403.141;

4. Contain such additional conditions, requirements, and
restrictions as the department deems necessary to preserve and
protect the quality of the receiving waters;

5. Be valid for the period of time specified therein; and
6. Constitute the state National Pollutant Discharge
Elimination System permit when issued pursuant to the authority
in s. 403.0885.

(3) No later than March 1 of each year, the department
shall submit a report to the Governor, the President of the
Senate, and the Speaker of the House of Representatives which
identifies all domestic wastewater treatment facilities that
experienced a sanitary sewer overflow in the preceding calendar
year. The report must identify the utility name, operator, permitted capacity in annual average gallons per day, the number of overflows, and the total volume of sewage released, and, to the extent known and available, the volume of sewage recovered, the volume of sewage discharged to surface waters, and the cause of the sanitary sewer overflow, including whether it was caused by a third party. The department shall include with this report the annual report specified under subparagraph (2)(c)3. for each utility that experienced an overflow.

Section 15. Subsection (6) of section 403.0891, Florida Statutes, is amended to read:

403.0891 State, regional, and local stormwater management plans and programs.—The department, the water management districts, and local governments shall have the responsibility for the development of mutually compatible stormwater management programs.

(6) The department and the Department of Economic Opportunity, in cooperation with local governments in the coastal zone, shall develop a model stormwater management program that could be adopted by local governments. The model program must contain model ordinances that target nutrient reduction practices and use green infrastructure. The model program shall contain dedicated funding options, including a stormwater utility fee system based upon an equitable unit cost approach. Funding options shall be designed to generate capital to retrofit existing stormwater management systems, build new treatment systems, operate facilities, and maintain and service debt.

Section 16. Paragraphs (b) and (g) of subsection (2),
paragraph (b) of subsection (3), and subsections (8) and (9) of section 403.121, Florida Statutes, are amended to read:

403.121 Enforcement; procedure; remedies.—The department shall have the following judicial and administrative remedies available to it for violations of this chapter, as specified in s. 403.161(1).

(2) Administrative remedies:

(b) If the department has reason to believe a violation has occurred, it may institute an administrative proceeding to order the prevention, abatement, or control of the conditions creating the violation or other appropriate corrective action. Except for violations involving hazardous wastes, asbestos, or underground injection, the department shall proceed administratively in all cases in which the department seeks administrative penalties that do not exceed $50,000 $10,000 per assessment as calculated in accordance with subsections (3), (4), (5), (6), and (7). Pursuant to 42 U.S.C. s. 300g-2, the administrative penalty assessed pursuant to subsection (3), subsection (4), or subsection (5) against a public water system serving a population of more than 10,000 shall be not less than $1,000 per day per violation. The department shall not impose administrative penalties in excess of $50,000 $10,000 in a notice of violation. The department shall not have more than one notice of violation seeking administrative penalties pending against the same party at the same time unless the violations occurred at a different site or the violations were discovered by the department subsequent to the filing of a previous notice of violation.

(g) Nothing herein shall be construed as preventing any
other legal or administrative action in accordance with law.
Nothing in this subsection shall limit the department’s
authority provided in ss. 403.131, 403.141, and this section to
judicially pursue injunctive relief. When the department
exercises its authority to judicially pursue injunctive relief,
penalties in any amount up to the statutory maximum sought by
the department must be pursued as part of the state court action
and not by initiating a separate administrative proceeding. The
department retains the authority to judicially pursue penalties
in excess of $10,000 for violations not specifically
included in the administrative penalty schedule, or for multiple
or multiday violations alleged to exceed a total of $10,000.
The department also retains the authority provided in
ss. 403.131, 403.141, and this section to judicially pursue
injunctive relief and damages, if a notice of violation seeking
the imposition of administrative penalties has not been issued.
The department has the authority to enter into a settlement,
either before or after initiating a notice of violation, and the
settlement may include a penalty amount different from the
administrative penalty schedule. Any case filed in state court
because it is alleged to exceed a total of $10,000 in
penalties may be settled in the court action for less than
$10,000.
(3) Except for violations involving hazardous wastes,
asbestos, or underground injection, administrative penalties
must be calculated according to the following schedule:
   (b) For failure to obtain a required wastewater permit,
other than a permit required for surface water discharge, the
department shall assess a penalty of $1,000. For a
domestic or industrial wastewater violation not involving a
surface water or groundwater quality violation, the department
shall assess a penalty of $4,000 for an unpermitted or
unauthorized discharge or effluent-limitation exceedance or
failure to comply with s. 403.061(14) or s. 403.086(7) or rules
adopted thereunder. For an unpermitted or unauthorized discharge
or effluent-limitation exceedance that resulted in a surface
water or groundwater quality violation, the department shall
assess a penalty of $10,000.

(8) The direct economic benefit gained by the violator from
the violation, where consideration of economic benefit is
provided by Florida law or required by federal law as part of a
federally delegated or approved program, shall be added to the
scheduled administrative penalty. The total administrative
penalty, including any economic benefit added to the scheduled
administrative penalty, shall not exceed $20,000.

(9) The administrative penalties assessed for any
particular violation shall not exceed $10,000 against any
one violator, unless the violator has a history of
noncompliance, the economic benefit of the violation as
described in subsection (8) exceeds $10,000, or there are
multiday violations. The total administrative penalties shall
not exceed $50,000 per assessment for all violations
attributable to a specific person in the notice of violation.

Section 17. Subsection (7) of section 403.1835, Florida
Statutes, is amended to read:

403.1835 Water pollution control financial assistance.—

(7) Eligible projects must be given priority according to
the extent each project is intended to remove, mitigate, or
prevent adverse effects on surface or ground water quality and
public health. The relative costs of achieving environmental and
public health benefits must be taken into consideration during
the department’s assignment of project priorities. The
department shall adopt a priority system by rule. In developing
the priority system, the department shall give priority to
projects that:

(a) Eliminate public health hazards;
(b) Enable compliance with laws requiring the elimination
of discharges to specific water bodies, including the
requirements of s. 403.086(10) and 403.086(9) regarding domestic
wastewater ocean outfalls;
(c) Assist in the implementation of total maximum daily
loads adopted under s. 403.067;
(d) Enable compliance with other pollution control
requirements, including, but not limited to, toxics control,
wastewater residuals management, and reduction of nutrients and
bacteria;
(e) Assist in the implementation of surface water
improvement and management plans and pollutant load reduction
goals developed under state water policy;
(f) Promote reclaimed water reuse;
(g) Eliminate failing onsite sewage treatment and disposal
systems or those that are causing environmental damage; or
(h) Reduce pollutants to and otherwise promote the
restoration of Florida’s surface and ground waters.
(i) Implement the requirements of ss. 403.086(7) and
403.088(2)(c).
(j) Promote efficiency by planning for the installation of
576-02463-20

wastewater transmission facilities to be constructed concurrently with other construction projects occurring within or along a transportation facility right-of-way.

Section 18. Paragraph (b) of subsection (3) of section 403.1838, Florida Statutes, is amended to read:

403.1838 Small Community Sewer Construction Assistance Act.—
(3) (b) The rules of the Environmental Regulation Commission must:
1. Require that projects to plan, design, construct, upgrade, or replace wastewater collection, transmission, treatment, disposal, and reuse facilities be cost-effective, environmentally sound, permittable, and implementable.
2. Require appropriate user charges, connection fees, and other charges sufficient to ensure the long-term operation, maintenance, and replacement of the facilities constructed under each grant.
3. Require grant applications to be submitted on appropriate forms with appropriate supporting documentation, and require records to be maintained.
4. Establish a system to determine eligibility of grant applications.
5. Establish a system to determine the relative priority of grant applications. The system must consider public health protection and water pollution prevention or abatement and must prioritize projects that plan for the installation of wastewater transmission facilities to be constructed concurrently with other construction projects occurring within or along a
transportation facility right-of-way.

6. Establish requirements for competitive procurement of engineering and construction services, materials, and equipment.

7. Provide for termination of grants when program requirements are not met.

Section 19. The Legislature determines and declares that this act fulfills an important state interest.

Section 20. Effective July 1, 2021, subsection (5) of section 153.54, Florida Statutes, is amended to read:

153.54 Preliminary report by county commissioners with respect to creation of proposed district.—Upon receipt of a petition duly signed by not less than 25 qualified electors who are also freeholders residing within an area proposed to be incorporated into a water and sewer district pursuant to this law and describing in general terms the proposed boundaries of such proposed district, the board of county commissioners if it shall deem it necessary and advisable to create and establish such proposed district for the purpose of constructing, establishing or acquiring a water system or a sewer system or both in and for such district (herein called “improvements”), shall first cause a preliminary report to be made which such report together with any other relevant or pertinent matters, shall include at least the following:

(5) For the construction of a new proposed central sewerage system or the extension of an existing sewerage system that was not previously approved, the report shall include a study that includes the available information from the Department of Environmental Protection Health on the history of onsite sewage treatment and disposal systems currently in use in the area and
576-02463-20

a comparison of the projected costs to the owner of a typical
lot or parcel of connecting to and using the proposed sewerage
system versus installing, operating, and properly maintaining an
onsite sewage treatment and disposal system that is approved by
the Department of Environmental Protection Health and that
provides for the comparable level of environmental and health
protection as the proposed central sewerage system;
consideration of the local authority’s obligations or reasonably
anticipated obligations for water body cleanup and protection
under state or federal programs, including requirements for
water bodies listed under s. 303(d) of the Clean Water Act, Pub.
L. No. 92-500, 33 U.S.C. ss. 1251 et seq.; and other factors
deemed relevant by the local authority.

Such report shall be filed in the office of the clerk of the
circuit court and shall be open for the inspection of any
taxpayer, property owner, qualified elector or any other
interested or affected person.

Section 21. Effective July 1, 2021, paragraph (c) of
subsection (2) of section 153.73, Florida Statutes, is amended
to read:

153.73 Assessable improvements; levy and payment of special
assessments.—Any district may provide for the construction or
reconstruction of assessable improvements as defined in s.
153.52, and for the levying of special assessments upon
benefited property for the payment thereof, under the provisions
of this section.

(2)
(c) For the construction of a new proposed central sewerage
system or the extension of an existing sewerage system that was not previously approved, the report shall include a study that includes the available information from the Department of Environmental Protection Health on the history of onsite sewage treatment and disposal systems currently in use in the area and a comparison of the projected costs to the owner of a typical lot or parcel of connecting to and using the proposed sewerage system versus installing, operating, and properly maintaining an onsite sewage treatment and disposal system that is approved by the Department of Environmental Protection Health and that provides for the comparable level of environmental and health protection as the proposed central sewerage system; consideration of the local authority’s obligations or reasonably anticipated obligations for water body cleanup and protection under state or federal programs, including requirements for water bodies listed under s. 303(d) of the Clean Water Act, Pub. L. No. 92-500, 33 U.S.C. ss. 1251 et seq.; and other factors deemed relevant by the local authority.

Section 22. Effective July 1, 2021, subsection (2) of section 163.3180, Florida Statutes, is amended to read:

163.3180 Concurrency.—

(2) Consistent with public health and safety, sanitary sewer, solid waste, drainage, adequate water supplies, and potable water facilities shall be in place and available to serve new development no later than the issuance by the local government of a certificate of occupancy or its functional equivalent. Prior to approval of a building permit or its functional equivalent, the local government shall consult with the applicable water supplier to determine whether adequate
water supplies to serve the new development will be available no later than the anticipated date of issuance by the local government of a certificate of occupancy or its functional equivalent. A local government may meet the concurrency requirement for sanitary sewer through the use of onsite sewage treatment and disposal systems approved by the Department of Environmental Protection to serve new development.

Section 23. Effective July 1, 2021, subsection (3) of section 180.03, Florida Statutes, is amended to read:

180.03 Resolution or ordinance proposing construction or extension of utility; objections to same.—

(3) For the construction of a new proposed central sewerage system or the extension of an existing central sewerage system that was not previously approved, the report shall include a study that includes the available information from the Department of Environmental Protection on the history of onsite sewage treatment and disposal systems currently in use in the area and a comparison of the projected costs to the owner of a typical lot or parcel of connecting to and using the proposed central sewerage system versus installing, operating, and properly maintaining an onsite sewage treatment and disposal system that is approved by the Department of Environmental Protection and that provides for the comparable level of environmental and health protection as the proposed central sewerage system; consideration of the local authority's obligations or reasonably anticipated obligations for water body cleanup and protection under state or federal programs, including requirements for water bodies listed under s. 303(d) of the Clean Water Act, Pub. L. No. 92-500, 33 U.S.C. ss. 1251
et seq.; and other factors deemed relevant by the local authority. The results of such a study shall be included in the resolution or ordinance required under subsection (1).

Section 24. Subsections (2), (3), and (6) of section 311.105, Florida Statutes, are amended to read:

311.105 Florida Seaport Environmental Management Committee; permitting; mitigation.—

(2) Each application for a permit authorized pursuant to ss. 403.061(38) and 403.061(37) must include:

(a) A description of maintenance dredging activities to be conducted and proposed methods of dredged-material management.

(b) A characterization of the materials to be dredged and the materials within dredged-material management sites.

(c) A description of dredged-material management sites and plans.

(d) A description of measures to be undertaken, including environmental compliance monitoring, to minimize adverse environmental effects of maintenance dredging and dredged-material management.

(e) Such scheduling information as is required to facilitate state supplementary funding of federal maintenance dredging and dredged-material management programs consistent with beach restoration criteria of the Department of Environmental Protection.

(3) Each application for a permit authorized pursuant to ss. 403.061(39) and 403.061(38) must include the provisions of paragraphs (2)(b)-(e) and the following:

(a) A description of dredging and dredged-material management and other related activities associated with port
development, including the expansion of navigation channels, dredged-material management sites, port harbors, turning basins, harbor berths, and associated facilities.

(b) A discussion of environmental mitigation as is proposed for dredging and dredged-material management for port development, including the expansion of navigation channels, dredged-material management sites, port harbors, turning basins, harbor berths, and associated facilities.

(6) Dredged-material management activities authorized pursuant to s. 403.061(38) or s. 403.061(37) shall be incorporated into port master plans developed pursuant to s. 163.3178(2)(k).

Section 25. Paragraph (d) of subsection (1) of section 327.46, Florida Statutes, is amended to read:

327.46 Boating-restricted areas.—

(1) Boating-restricted areas, including, but not limited to, restrictions of vessel speeds and vessel traffic, may be established on the waters of this state for any purpose necessary to protect the safety of the public if such restrictions are necessary based on boating accidents, visibility, hazardous currents or water levels, vessel traffic congestion, or other navigational hazards or to protect seagrasses on privately owned submerged lands.

(d) Owners of private submerged lands that are adjacent to Outstanding Florida Waters, as defined in s. 403.061(28) or 403.061(27), or an aquatic preserve established under ss. 258.39-258.399 may request that the commission establish boating-restricted areas solely to protect any seagrass and contiguous seagrass habitat within their private property.
boundaries from seagrass scarring due to propeller dredging. Owners making a request pursuant to this paragraph must demonstrate to the commission clear ownership of the submerged lands. The commission shall adopt rules to implement this paragraph, including, but not limited to, establishing an application process and criteria for meeting the requirements of this paragraph. Each approved boating-restricted area shall be established by commission rule. For marking boating-restricted zones established pursuant to this paragraph, owners of privately submerged lands shall apply to the commission for a uniform waterway marker permit in accordance with ss. 327.40 and 327.41, and shall be responsible for marking the boating-restricted zone in accordance with the terms of the permit.

Section 26. Paragraph (d) of subsection (3) of section 373.250, Florida Statutes, is amended to read:

373.250 Reuse of reclaimed water.—

(3)

(d) The South Florida Water Management District shall require the use of reclaimed water made available by the elimination of wastewater ocean outfall discharges as provided for in s. 403.086(10) in lieu of surface water or groundwater when the use of reclaimed water is available; is environmentally, economically, and technically feasible; and is of such quality and reliability as is necessary to the user. Such reclaimed water may also be required in lieu of other alternative sources. In determining whether to require such reclaimed water in lieu of other alternative sources, the water management district shall consider existing infrastructure investments in place or obligated to be constructed by an
executed contract or similar binding agreement as of July 1, 2011, for the development of other alternative sources.

Section 27. Subsection (9) of section 373.414, Florida Statutes, is amended to read:

373.414 Additional criteria for activities in surface waters and wetlands.—

(9) The department and the governing boards, on or before July 1, 1994, shall adopt rules to incorporate the provisions of this section, relying primarily on the existing rules of the department and the water management districts, into the rules governing the management and storage of surface waters. Such rules shall seek to achieve a statewide, coordinated and consistent permitting approach to activities regulated under this part. Variations in permitting criteria in the rules of individual water management districts or the department shall only be provided to address differing physical or natural characteristics. Such rules adopted pursuant to this subsection shall include the special criteria adopted pursuant to s. 403.061(30) and may include the special criteria adopted pursuant to s. 403.061(35). Such rules shall include a provision requiring that a notice of intent to deny or a permit denial based upon this section shall contain an explanation of the reasons for such denial and an explanation, in general terms, of what changes, if any, are necessary to address such reasons for denial. Such rules may establish exemptions and general permits, if such exemptions and general permits do not allow significant adverse impacts to occur individually or cumulatively. Such rules may require submission of proof of financial responsibility which may include the
posting of a bond or other form of surety prior to the commencement of construction to provide reasonable assurance that any activity permitted pursuant to this section, including any mitigation for such permitted activity, will be completed in accordance with the terms and conditions of the permit once the construction is commenced. Until rules adopted pursuant to this subsection become effective, existing rules adopted under this part and rules adopted pursuant to the authority of ss. 403.91-403.929 shall be deemed authorized under this part and shall remain in full force and effect. Neither the department nor the governing boards are limited or prohibited from amending any such rules.

Section 28. Paragraph (b) of subsection (4) of section 373.705, Florida Statutes, is amended to read:

373.705 Water resource development; water supply development.—

(4) (b) Water supply development projects that meet the criteria in paragraph (a) and that meet one or more of the following additional criteria shall be given first consideration for state or water management district funding assistance:

1. The project brings about replacement of existing sources in order to help implement a minimum flow or minimum water level;

2. The project implements reuse that assists in the elimination of domestic wastewater ocean outfalls as provided in s. 403.086(10), or

3. The project reduces or eliminates the adverse effects of competition between legal users and the natural system.
Section 29. Paragraph (f) of subsection (8) of section 373.707, Florida Statutes, is amended to read:

373.707 Alternative water supply development.—

(8)

(f) The governing boards shall determine those projects that will be selected for financial assistance. The governing boards may establish factors to determine project funding; however, significant weight shall be given to the following factors:

1. Whether the project provides substantial environmental benefits by preventing or limiting adverse water resource impacts.

2. Whether the project reduces competition for water supplies.

3. Whether the project brings about replacement of traditional sources in order to help implement a minimum flow or level or a reservation.

4. Whether the project will be implemented by a consumptive use permittee that has achieved the targets contained in a goal-based water conservation program approved pursuant to s. 373.227.

5. The quantity of water supplied by the project as compared to its cost.

6. Projects in which the construction and delivery to end users of reuse water is a major component.

7. Whether the project will be implemented by a multijurisdictional water supply entity or regional water supply authority.

8. Whether the project implements reuse that assists in the
elimination of domestic wastewater ocean outfalls as provided in s. 403.086(10) s. 403.086(9).

9. Whether the county or municipality, or the multiple counties or municipalities, in which the project is located has implemented a high-water recharge protection tax assessment program as provided in s. 193.625.

Section 30. Subsection (4) of section 373.709, Florida Statutes, is amended to read:

373.709 Regional water supply planning.—

(4) The South Florida Water Management District shall include in its regional water supply plan water resource and water supply development projects that promote the elimination of wastewater ocean outfalls as provided in s. 403.086(10) s. 403.086(9).

Section 31. Effective July 1, 2021, subsection (3) of section 373.807, Florida Statutes, is amended to read:

373.807 Protection of water quality in Outstanding Florida Springs.—By July 1, 2016, the department shall initiate assessment, pursuant to s. 403.067(3), of Outstanding Florida Springs or spring systems for which an impairment determination has not been made under the numeric nutrient standards in effect for spring vents. Assessments must be completed by July 1, 2018.

(3) As part of a basin management action plan that includes an Outstanding Florida Spring, the department, the Department of Health, relevant local governments, and relevant local public and private wastewater utilities shall develop an onsite sewage treatment and disposal system remediation plan for a spring if the department determines onsite sewage treatment and disposal systems within a priority focus area contribute at least 20
percent of nonpoint source nitrogen pollution or if the department determines remediation is necessary to achieve the total maximum daily load. The plan shall identify cost-effective and financially feasible projects necessary to reduce the nutrient impacts from onsite sewage treatment and disposal systems and shall be completed and adopted as part of the basin management action plan no later than the first 5-year milestone required by subparagraph (1)(b)8. The department is the lead agency in coordinating the preparation of and the adoption of the plan. The department shall:

(a) Collect and evaluate credible scientific information on the effect of nutrients, particularly forms of nitrogen, on springs and springs systems; and

(b) Develop a public education plan to provide area residents with reliable, understandable information about onsite sewage treatment and disposal systems and springs.

In addition to the requirements in s. 403.067, the plan shall include options for repair, upgrade, replacement, drainfield modification, addition of effective nitrogen reducing features, connection to a central sewerage system, or other action for an onsite sewage treatment and disposal system or group of systems within a priority focus area that contribute at least 20 percent of nonpoint source nitrogen pollution or if the department determines remediation is necessary to achieve a total maximum daily load. For these systems, the department shall include in the plan a priority ranking for each system or group of systems that requires remediation and shall award funds to implement the remediation projects contingent on an appropriation in the
General Appropriations Act, which may include all or part of the
costs necessary for repair, upgrade, replacement, drainfield
modification, addition of effective nitrogen reducing features,
initial connection to a central sewerage system, or other
action. In awarding funds, the department may consider expected
nutrient reduction benefit per unit cost, size and scope of
project, relative local financial contribution to the project,
and the financial impact on property owners and the community.
The department may waive matching funding requirements for
proposed projects within an area designated as a rural area of
opportunity under s. 288.0656.

Section 32. Paragraph (k) of subsection (1) of section
376.307, Florida Statutes, is amended to read:

376.307 Water Quality Assurance Trust Fund.—

(1) The Water Quality Assurance Trust Fund is intended to
serve as a broad-based fund for use in responding to incidents
of contamination that pose a serious danger to the quality of
groundwater and surface water resources or otherwise pose a
serious danger to the public health, safety, or welfare. Moneys
in this fund may be used:

(k) For funding activities described in s. 403.086(10) or
403.086(9) which are authorized for implementation under the
Leah Schad Memorial Ocean Outfall Program.

Section 33. Paragraph (i) of subsection (2), paragraph (b)
of subsection (4), paragraph (j) of subsection (7), and
paragraph (a) of subsection (9) of section 380.0552, Florida
Statutes, are amended to read:

380.0552 Florida Keys Area; protection and designation as
area of critical state concern.—
(2) LEGISLATIVE INTENT.—It is the intent of the Legislature to:

(i) Protect and improve the nearshore water quality of the Florida Keys through federal, state, and local funding of water quality improvement projects, including the construction and operation of wastewater management facilities that meet the requirements of ss. 381.0065(4)(l) and 403.086(11), as applicable.

(4) REMOVAL OF DESIGNATION.—

(b) Beginning November 30, 2010, the state land planning agency shall annually submit a written report to the Administration Commission describing the progress of the Florida Keys Area toward completing the work program tasks specified in commission rules. The land planning agency shall recommend removing the Florida Keys Area from being designated as an area of critical state concern to the commission if it determines that:

1. All of the work program tasks have been completed, including construction of, operation of, and connection to central wastewater management facilities pursuant to s. 403.086(11) and upgrade of onsite sewage treatment and disposal systems pursuant to s. 381.0065(4)(l);

2. All local comprehensive plans and land development regulations and the administration of such plans and regulations are adequate to protect the Florida Keys Area, fulfill the legislative intent specified in subsection (2), and are consistent with and further the principles guiding development; and

3. A local government has adopted a resolution at a public
(7) PRINCIPLES FOR GUIDING DEVELOPMENT.—State, regional, and local agencies and units of government in the Florida Keys Area shall coordinate their plans and conduct their programs and regulatory activities consistent with the principles for guiding development as specified in chapter 27F-8, Florida Administrative Code, as amended effective August 23, 1984, which is adopted and incorporated herein by reference. For the purposes of reviewing the consistency of the adopted plan, or any amendments to that plan, with the principles for guiding development, and any amendments to the principles, the principles shall be construed as a whole and specific provisions may not be construed or applied in isolation from the other provisions. However, the principles for guiding development are repealed 18 months from July 1, 1986. After repeal, any plan amendments must be consistent with the following principles:

(j) Ensuring the improvement of nearshore water quality by requiring the construction and operation of wastewater management facilities that meet the requirements of ss. 381.0065(4)(l) and s. 403.086(11), as applicable, and by directing growth to areas served by central wastewater treatment facilities through permit allocation systems.

(9) MODIFICATION TO PLANS AND REGULATIONS.—

(a) Any land development regulation or element of a local comprehensive plan in the Florida Keys Area may be enacted, amended, or rescinded by a local government, but the enactment, amendment, or rescission becomes effective only upon approval by the state land planning agency. The state land planning agency shall review the proposed change to determine if it is in
compliance with the principles for guiding development specified in chapter 27F-8, Florida Administrative Code, as amended effective August 23, 1984, and must approve or reject the requested changes within 60 days after receipt. Amendments to local comprehensive plans in the Florida Keys Area must also be reviewed for compliance with the following:

1. Construction schedules and detailed capital financing plans for wastewater management improvements in the annually adopted capital improvements element, and standards for the construction of wastewater treatment and disposal facilities or collection systems that meet or exceed the criteria in s. 403.086(11) or 403.086(10) for wastewater treatment and disposal facilities or s. 381.0065(4)(l) for onsite sewage treatment and disposal systems.

2. Goals, objectives, and policies to protect public safety and welfare in the event of a natural disaster by maintaining a hurricane evacuation clearance time for permanent residents of no more than 24 hours. The hurricane evacuation clearance time shall be determined by a hurricane evacuation study conducted in accordance with a professionally accepted methodology and approved by the state land planning agency.

Section 34. Effective July 1, 2021, subsections (7) and (18) of section 381.006, Florida Statutes, are amended to read:

381.006 Environmental health.—The department shall conduct an environmental health program as part of fulfilling the state’s public health mission. The purpose of this program is to detect and prevent disease caused by natural and manmade factors in the environment. The environmental health program shall include, but not be limited to:
An onsite sewage treatment and disposal function.

(17) A food service inspection function for domestic violence centers that are certified by the Department of Children and Families and monitored by the Florida Coalition Against Domestic Violence under part XII of chapter 39 and group care homes as described in subsection (15), which shall be conducted annually and be limited to the requirements in department rule applicable to community-based residential facilities with five or fewer residents.

The department may adopt rules to carry out the provisions of this section.

Section 35. Effective July 1, 2021, subsection (1) of section 381.0061, Florida Statutes, is amended to read:

381.0061 Administrative fines.—

(1) In addition to any administrative action authorized by chapter 120 or by other law, the department may impose a fine, which may not exceed $500 for each violation, for a violation of s. 381.006(15), s. 381.006(16), s. 381.0065, s. 381.0066, s. 381.0072, or part III of chapter 489, for a violation of any rule adopted under this chapter, or for a violation of any of the provisions of chapter 386. Notice of intent to impose such fine shall be given by the department to the alleged violator. Each day that a violation continues may constitute a separate violation.

Section 36. Effective July 1, 2021, subsection (1) of section 381.0064, Florida Statutes, is amended to read:

381.0064 Continuing education courses for persons installing or servicing septic tanks.—
(1) The Department of Environmental Protection Health shall establish a program for continuing education which meets the purposes of ss. 381.0101 and 489.554 regarding the public health and environmental effects of onsite sewage treatment and disposal systems and any other matters the department determines desirable for the safe installation and use of onsite sewage treatment and disposal systems. The department may charge a fee to cover the cost of such program.

Section 37. Effective July 1, 2021, paragraph (d) of subsection (7), subsection (8), and paragraphs (b), (c), and (d) of subsection (9) of section 381.00651, Florida Statutes, are amended to read:

381.00651 Periodic evaluation and assessment of onsite sewage treatment and disposal systems.—

(7) The following procedures shall be used for conducting evaluations:

(d) Assessment procedure.—All evaluation procedures used by a qualified contractor shall be documented in the environmental health database of the Department of Environmental Protection Health. The qualified contractor shall provide a copy of a written, signed evaluation report to the property owner upon completion of the evaluation and to the county health department within 30 days after the evaluation. The report must contain the name and license number of the company providing the report. A copy of the evaluation report shall be retained by the local county health department for a minimum of 5 years and until a subsequent inspection report is filed. The front cover of the report must identify any system failure and include a clear and conspicuous notice to the owner that the owner has a
right to have any remediation of the failure performed by a qualified contractor other than the contractor performing the evaluation. The report must further identify any crack, leak, improper fit, or other defect in the tank, manhole, or lid, and any other damaged or missing component; any sewage or effluent visible on the ground or discharging to a ditch or other surface water body; any downspout, stormwater, or other source of water directed onto or toward the system; and any other maintenance need or condition of the system at the time of the evaluation which, in the opinion of the qualified contractor, would possibly interfere with or restrict any future repair or modification to the existing system. The report shall conclude with an overall assessment of the fundamental operational condition of the system.

(8) The county health department, in coordination with the department, shall administer any evaluation program on behalf of a county, or a municipality within the county, that has adopted an evaluation program pursuant to this section. In order to administer the evaluation program, the county or municipality, in consultation with the county health department, may develop a reasonable fee schedule to be used solely to pay for the costs of administering the evaluation program. Such a fee schedule shall be identified in the ordinance that adopts the evaluation program. When arriving at a reasonable fee schedule, the estimated annual revenues to be derived from fees may not exceed reasonable estimated annual costs of the program. Fees shall be assessed to the system owner during an inspection and separately identified on the invoice of the qualified contractor. Fees shall be remitted by the qualified contractor to the county
health department. The county health department’s administrative responsibilities include the following:

(a) Providing a notice to the system owner at least 60 days before the system is due for an evaluation. The notice may include information on the proper maintenance of onsite sewage treatment and disposal systems.

(b) In consultation with the department of Health, providing uniform disciplinary procedures and penalties for qualified contractors who do not comply with the requirements of the adopted ordinance, including, but not limited to, failure to provide the evaluation report as required in this subsection to the system owner and the county health department. Only the county health department may assess penalties against system owners for failure to comply with the adopted ordinance, consistent with existing requirements of law.

(9)

(b) Upon receipt of the notice under paragraph (a), the department of Environmental Protection shall, within existing resources, notify the county or municipality of the potential use of, and access to, program funds under the Clean Water State Revolving Fund or s. 319 of the Clean Water Act, provide guidance in the application process to receive such moneys, and provide advice and technical assistance to the county or municipality on how to establish a low-interest revolving loan program or how to model a revolving loan program after the low-interest loan program of the Clean Water State Revolving Fund. This paragraph does not obligate the department of Environmental Protection to provide any county or municipality with money to fund such programs.
(c) The department of Health may not adopt any rule that alters the provisions of this section.

(d) The department of Health must allow county health departments and qualified contractors access to the environmental health database to track relevant information and assimilate data from assessment and evaluation reports of the overall condition of onsite sewage treatment and disposal systems. The environmental health database must be used by contractors to report each service and evaluation event and by a county health department to notify owners of onsite sewage treatment and disposal systems when evaluations are due. Data and information must be recorded and updated as service and evaluations are conducted and reported.

Section 38. Effective July 1, 2021, paragraph (g) of subsection (1) of section 381.0101, Florida Statutes, is amended to read:

381.0101 Environmental health professionals.—
(1) DEFINITIONS.—As used in this section:
(g) “Primary environmental health program” means those programs determined by the department to be essential for providing basic environmental and sanitary protection to the public. At a minimum, these programs shall include food protection program work and onsite sewage treatment and disposal system evaluations.

Section 39. Section 403.08601, Florida Statutes, is amended to read:

403.08601 Leah Schad Memorial Ocean Outfall Program.—The Legislature declares that as funds become available the state may assist the local governments and agencies responsible for
implementing the Leah Schad Memorial Ocean Outfall Program pursuant to s. 403.086(10) s. 403.086(9). Funds received from other sources provided for in law, the General Appropriations Act, from gifts designated for implementation of the plan from individuals, corporations, or other entities, or federal funds appropriated by Congress for implementation of the plan, may be deposited into an account of the Water Quality Assurance Trust Fund.

Section 40. Section 403.0871, Florida Statutes, is amended to read:

403.0871 Florida Permit Fee Trust Fund.—There is established within the department a nonlapsing trust fund to be known as the “Florida Permit Fee Trust Fund.” All funds received from applicants for permits pursuant to ss. 161.041, 161.053, 161.0535, 403.087(7) 403.087(6), and 403.861(7)(a) shall be deposited in the Florida Permit Fee Trust Fund and shall be used by the department with the advice and consent of the Legislature to supplement appropriations and other funds received by the department for the administration of its responsibilities under this chapter and chapter 161. In no case shall funds from the Florida Permit Fee Trust Fund be used for salary increases without the approval of the Legislature.

Section 41. Paragraph (a) of subsection (11) of section 403.0872, Florida Statutes, is amended to read:

403.0872 Operation permits for major sources of air pollution; annual operation license fee.—Provided that program approval pursuant to 42 U.S.C. s. 7661a has been received from the United States Environmental Protection Agency, beginning January 2, 1995, each major source of air pollution, including
electrical power plants certified under s. 403.511, must obtain
from the department an operation permit for a major source of
air pollution under this section. This operation permit is the
only department operation permit for a major source of air
pollution required for such source; provided, at the applicant’s
request, the department shall issue a separate acid rain permit
for a major source of air pollution that is an affected source
within the meaning of 42 U.S.C. s. 7651a(1). Operation permits
for major sources of air pollution, except general permits
issued pursuant to s. 403.814, must be issued in accordance with
the procedures contained in this section and in accordance with
chapter 120; however, to the extent that chapter 120 is
inconsistent with the provisions of this section, the procedures
contained in this section prevail.

(11) Each major source of air pollution permitted to
operate in this state must pay between January 15 and April 1 of
each year, upon written notice from the department, an annual
operation license fee in an amount determined by department
rule. The annual operation license fee shall be terminated
immediately in the event the United States Environmental
Protection Agency imposes annual fees solely to implement and
administer the major source air-operation permit program in
Florida under 40 C.F.R. s. 70.10(d).

(a) The annual fee must be assessed based upon the source’s
previous year’s emissions and must be calculated by multiplying
the applicable annual operation license fee factor times the
tons of each regulated air pollutant actually emitted, as
calculated in accordance with the department’s emissions
computation and reporting rules. The annual fee shall only apply
to those regulated pollutants, except carbon monoxide and greenhouse gases, for which an allowable numeric emission limiting standard is specified in the source’s most recent construction or operation permit; provided, however, that:

1. The license fee factor is $25 or another amount determined by department rule which ensures that the revenue provided by each year’s operation license fees is sufficient to cover all reasonable direct and indirect costs of the major stationary source air-operation permit program established by this section. The license fee factor may be increased beyond $25 only if the secretary of the department affirmatively finds that a shortage of revenue for support of the major stationary source air-operation permit program will occur in the absence of a fee factor adjustment. The annual license fee factor may never exceed $35.

2. The amount of each regulated air pollutant in excess of 4,000 tons per year emitted by any source, or group of sources belonging to the same Major Group as described in the Standard Industrial Classification Manual, 1987, may not be included in the calculation of the fee. Any source, or group of sources, which does not emit any regulated air pollutant in excess of 4,000 tons per year, is allowed a one-time credit not to exceed 25 percent of the first annual licensing fee for the prorated portion of existing air-operation permit application fees remaining upon commencement of the annual licensing fees.

3. If the department has not received the fee by March 1 of the calendar year, the permittee must be sent a written warning of the consequences for failing to pay the fee by April 1. If the fee is not postmarked by April 1 of the calendar year, the
department shall impose, in addition to the fee, a penalty of 50 percent of the amount of the fee, plus interest on such amount computed in accordance with s. 220.807. The department may not impose such penalty or interest on any amount underpaid, provided that the permittee has timely remitted payment of at least 90 percent of the amount determined to be due and remits full payment within 60 days after receipt of notice of the amount underpaid. The department may waive the collection of underpayment and may not be required to refund overpayment of the fee, if the amount due is less than 1 percent of the fee, up to $50. The department may revoke any major air pollution source operation permit if it finds that the permitholder has failed to timely pay any required annual operation license fee, penalty, or interest.

4. Notwithstanding the computational provisions of this subsection, the annual operation license fee for any source subject to this section may not be less than $250, except that the annual operation license fee for sources permitted solely through general permits issued under s. 403.814 may not exceed $50 per year.

5. Notwithstanding s. 403.087(7)(a)5.a., which authorizes the provisions of s. 403.087(6)(a)5.a., authorizing air pollution construction permit fees, the department may not require such fees for changes or additions to a major source of air pollution permitted pursuant to this section, unless the activity triggers permitting requirements under Title I, Part C or Part D, of the federal Clean Air Act, 42 U.S.C. ss. 7470-7514a. Costs to issue and administer such permits shall be considered direct and indirect costs of the major stationary
source air-operation permit program under s. 403.0873. The
department shall, however, require fees pursuant to s. 403.087(7)(a)5.a. the provisions of s. 403.087(6)(a)5.a. for the
collection of a new major source of air pollution that will be
subject to the permitting requirements of this section once
constructed and for activities triggering permitting
requirements under Title I, Part C or Part D, of the federal
Clean Air Act, 42 U.S.C. ss. 7470-7514a.

Section 42. Paragraph (d) of subsection (3) of section
403.707, Florida Statutes, is amended to read:

403.707 Permits.—
(3)
(d) The department may adopt rules to administer this
subsection. However, the department is not required to submit
such rules to the Environmental Regulation Commission for
approval. Notwithstanding the limitations of s. 403.087(7)(a)5.a. and s. 403.087(6)(a), permit fee caps for solid waste management
facilities shall be prorated to reflect the extended permit term
authorized by this subsection.

Section 43. Subsections (8) and (21) of section 403.861,
Florida Statutes, are amended to read:

403.861 Department; powers and duties.—The department shall
have the power and the duty to carry out the provisions and
purposes of this act and, for this purpose, to:

(8) Initiate rulemaking to increase each drinking water
permit application fee authorized under s. 403.087(7)5.a. and s. 403.087(6) and this part and adopted by rule to ensure that such
fees are increased to reflect, at a minimum, any upward
adjustment in the Consumer Price Index compiled by the United
States Department of Labor, or similar inflation indicator, since the original fee was established or most recently revised.

(a) The department shall establish by rule the inflation index to be used for this purpose. The department shall review the drinking water permit application fees authorized under s. 403.087(7) and this part at least once every 5 years and shall adjust the fees upward, as necessary, within the established fee caps to reflect changes in the Consumer Price Index or similar inflation indicator. In the event of deflation, the department shall consult with the Executive Office of the Governor and the Legislature to determine whether downward fee adjustments are appropriate based on the current budget and appropriation considerations. The department shall also review the drinking water operation license fees established pursuant to paragraph (7)(b) at least once every 5 years to adopt, as necessary, the same inflationary adjustments provided for in this subsection.

(b) The minimum fee amount shall be the minimum fee prescribed in this section, and such fee amount shall remain in effect until the effective date of fees adopted by rule by the department.

(21)(a) Upon issuance of a construction permit to construct a new public water system drinking water treatment facility to provide potable water supply using a surface water that, at the time of the permit application, is not being used as a potable water supply, and the classification of which does not include potable water supply as a designated use, the department shall add treated potable water supply as a designated use of the surface water segment in accordance with s. 403.061(30)(b)
403.061(29)(b).

(b) For existing public water system drinking water treatment facilities that use a surface water as a treated potable water supply, which surface water classification does not include potable water supply as a designated use, the department shall add treated potable water supply as a designated use of the surface water segment in accordance with s. 403.061(30)(b) or 403.061(29)(b).

Section 44. Effective July 1, 2021, subsection (1) of section 489.551, Florida Statutes, is amended to read:

489.551 Definitions.—As used in this part:

1. “Department” means the Department of Environmental Protection Health.

Section 45. Paragraph (b) of subsection (10) of section 590.02, Florida Statutes, is amended to read:

590.02 Florida Forest Service; powers, authority, and duties; liability; building structures; Withlacoochee Training Center.—

1. As delegated by the Department of Environmental Protection pursuant to ss. 403.061(29) or 403.061(28) and 403.081, to manage and enforce regulations pertaining to the burning of yard trash in accordance with s. 590.125(6).

2. To manage the open burning of land clearing debris in accordance with s. 590.125.

Section 46. The Division of Law Revision is directed to replace the phrase “adoption of the rules identified in
paragraph (e)" as it is used in the amendment made by this act to s. 381.0065, Florida Statutes, with the date such rules are adopted, as provided by the Department of Environmental Protection pursuant to s. 381.0065(4)(e), Florida Statutes, as amended by this act.

Section 47. Except as otherwise expressly provided in this act, this act shall take effect July 1, 2020.
