For the purposes of this section, annual loading from the 131 proposed project refers to post-development loads before 132 treatment, as calculated in Section 9 of this volume. Stormwater 133 treatment systems shall be designed to achieve at least an 80 134 percent reduction of the average annual post-development total 135 suspended solids (TSS) load, or 95 percent of the average annual 136 post-development TSS load for those proposed projects located 137 within a HUC 12 sub-watershed containing an Outstanding Florida 138 Water (OFW) and located upstream of that OFW. There is a 139 rebuttable presumption that this standard is met when structural 140 stormwater best management practices (BMPs) are designed to meet the applicable design standards in Sections 8.3.2 through 8.3.5 141 142 below." 143 (h) Section 9.1 of the Applicant's Handbook Volume I, 144 incorporated in rule 62-330.010(4)(a), Florida Administrative

146 nutrient load reduction calculations in their application. To 147 calculate the required stormwater nutrient load reduction for a 148 project, the applicant should: 149 1. Determine whether the site falls within the same HUC 12 150 sub-watershed as, and is upstream of, an OFW or impaired water, 151 and select the corresponding performance standard from Section 152 8.3 of this volume; 153 2. Determine the pre-development average annual average 154 mass loading of the project area for both total nitrogen (TN) 155 and total phosphorus (TP) through modeling or as described in 156 Section 9.2; 157 3. Calculate the project area's post-development annual 158 average mass loading before treatment for both TN and TP through 159 modeling or as described in Section 9.2; 160 4. Determine the percent TN and TP reduction needed as 161 defined within Sections 8.3 and 9.3 of this volume. The greater 162 percent load reduction will be the requirement for the project; 163 and 5. Determine which BMPs, or other treatment and reduction 164 165 options, will be used to meet the required TN and TP load 166 reductions that are equivalent to, or which exceed, the 167 applicable performance standards in Sections 8.2.3 through 8.3.6. Information on how to calculate nutrient load reduction 168 for BMP Treatment Train is found in Section 9.5 of this volume. 169 170 171 When an applicant provides reasonable assurance that its 172 modeling, calculations, and applicable supporting documentation 173 satisfy the provisions described above, the applicant shall have 174 demonstrated that it meets the performance standards specified
